Project Development Objectives

Project Development Objective (from Project Appraisal Document)

The project development objective is to test new approaches to improve community livelihoods and forested landscape management, and to reduce greenhouse gas emissions from deforestation and forest degradation in selected areas in the Recipient's territory.

Has the Project Development Objective been changed since Board Approval of the Project Objective?

No

Public Disclosure Authorized

Implementation Status and Key Decisions

- The parent project (FIP grant) closed on 30 June 2020 as planned (100% disbursement). The PIU (UC-PIF) closed operations across
 all project components, including inventories and transfer of assets, closure of contracts, and preparation of component level completion
 reports. The FIP Completion Report was prepared and shared with the Bank in January 2021. It will support the preparation of the overall
 project's Implementation Completion Report (ICR) which will be prepared by the Bank in 2022/2023.
- In the Mai-Ndombe Province, project implementation has progressed although COVID restrictions have put a strain on activities since 2020:

1/14/2022 Page 1 of 9

1/ In the Plateaux District, where activities closed in June 2020 (FIP grant), 215 Local Development Committees (LDC) were operationalized in the four territories (Bolobo, Kwamouth, Mushie, and Yumbi), and formally registered with proper articles of association and recognized by the decentralized administration. The LDCs are supporting the management planning exercise of their territories as validated by the four Councils for Agriculture and Rural Management (CART, Conseil Agricole Rural de Territoire) at the territory level with the aim of reducing pressure on native forests by promoting alternatives to slash-and-burn in forested landscapes. 133 Natural Resource Management Plans (NRMP) were completed out of an objective of 133. The validation of 25 NRMPs in the Yumbi Territory was not made possible due to December 2018 conflicts and subsequent withdrawal of project staff. In addition, there were 4 contentious NRMPs in the Bolobo Territory which had not been validated. A joint mission including representatives from UC-PIF, WWF, and national CSOs went to Yumbi and Bolobo Territories from November 25 to December 3, 2019, and resulted in 1) the validation of the 25 NRMPs in Yumbi and 2) suspending validation for the 4 NRMPs in Bolobo recognizing this the long-lasting customary conflicts over land limits in the area which do not allow local authorities to endorse the NRMPs for the time being. 155 LDCs (7,282 households) benefited from Payments for Environmental Services (PES), with around 1.36 million USD paid in the field and reinvested in microprojects at the community and/or household level.

2/ In the Mai-Ndombe District, where activities are ongoing, 480 CLDs have been created or dynamized and are functional (out of the 400 expected) with 404 NRMPs validated. 1793 hectares of agroforestry plantations (acacia) have been implemented (out of the 990 ha planned), 1,595 ha of oil palm (out of the 2,000 ha planned), 698 hectares of perennials (out of the 6,000 ha planned), 9,936 hectares of exclosures/set-asides (out of the 20,000 expected) 4 CARG and 15 CART have been revitalized and are functional, and about 1.5 USD million in PES has been paid to communities. 24 concessioner farmers (including 2 women and 2 Indigenous Peoples) and 9,593 farmers (including 3,203 women and 206 Indigenous Peoples) are direct beneficiaries of the project. Although in 2020-2021 progress was slowed down by COVID-related restrictions, the local implementing agency and NGO service providers remained in the field presence to engage with communities on awareness-raising and dialogue related to LCDs, nurseries, and PES. In November 2020 the PIU, local implementation agency, and Bank have agreed on an action plan to catch up with implementation delays throughout 2021. The project's Provincial Steering Committee was not held in 2021 due to COVID constraints and the political situation in Mai Ndombe but the PIU, FONAREDD and Bank are discussing options to do so in early 2022.

- 21,252 hectares of Agroforestry plantations are in place (71% of the overall objective). 894 ha have been lost to bushfires since Sept. 2019. The breakdown is as follows: Component 1: 7,458 ha including 4,070 ha under PIREDD Plateau (81% of the FIP objective), 3,388 ha under PIREDD Mai-Ndombe (113% of the CAFI objective), and 698 ha of perennials under PIREDD Mai-Ndombe (12% of the CAFI objective); Component 2: 5,493 ha (55% of the objective of the parent project); and Component 3: 7,603 ha (152% of the FIP objective)
- In addition, 171,987 hectares of exclosures to facilitate natural regeneration by protecting land areas from bush fires are in place in savanna and forest areas. The breakdown is as follows: Component 1: 162,119 ha including 149,989 ha under PIREDD Plateau (13,944 incl. 9,669 ha supported by PSE (accounting loss), and 136,045 of primary forest identified by communities for conservation) and 12,130 ha under PIREDD Mai-Ndombe; and Component 3: 9,868 ha.
- Under Component 3, the project facilitated the dissemination of 86,625 cookstoves (115% of the objective) and the avoidance of 0.34 million tons of CO2 (tCO2eq.).
- Overall emission reductions generated by project activities are estimated at 5.92 million tCO2eq. Removals from afforestation / reforestation activities are estimated at 1.26 million tCO2eq. Avoided emissions from deforestation and forest degradation have not been monitored yet (on-going work with the University of Maryland) and are based on estimates from the Mai Ndombe Emissions Reduction Program Document (4,322,052 tCO2eq.).
- Regarding connectivity among territories, 252 kilometers of roads in Plateaux District were restored. In the Mai Ndombe District, an infrastructure intervention plan was developed with authorities and started implementation in May 2021. As of December 2021, 60 kilometers of road have been restored through the HIMO approach (Mushi-Mbali axis), 1 metal bridge rehabilitated (46 meters in Ngapoko) and 14 bridges and 4 road culverts are being finalized.
- The project website (www.pifrdc.org) has been up and running since November 15, 2017. Its objective is to promote: (i) the dissemination of lessons learned; and (ii) the use of the Feedback and Grievance Redress Mechanism. Grievances can be submitted online or by contacting: (i) plaintes.recours.pif@gmail.com; (ii) the Forest Investment Program Coordination Unit (UC-PIF); (iii) the Local Implementing agencies (Agences Locales d'Exécution); and (iv) the CLDs or the CARTs.
- A socioeconomic study focusing on the monetary and non-monetary benefits of the project was conducted using a sampling of
 1,650 households spread all over the project boundary, shows that 15,700 households or 110,000 inhabitants, including 58,400 women
 (92 percent of the end target of the parent project) have benefited from the project. Populations saw an 18% increase (+ US\$448 per
 annum) in their incomes. A similar study was prepared in 2020 for the Mai Ndombe District to define the baseline and monitor socioeconomic benefits for PIREDD Mai Ndombe.

Designing a new approach: (i) Payment for Environmental Services (PES) rewarding efforts in agroforestry (1 point) and in the fight against bush fires (1 point) based on exclosures; (ii) Support the private sector by subsidizing agroforestry investments in the field (1 point); and (iii) promoting the production of non timber forest products out of the agroforestry models (1 point). Implementing a new approach (2 points per year): 8 points as the four new approaches described above

have been implemented for two years.

Satisfactory implementation (2 points per year): 8 points as the four new approaches described above have been satisfactorily implemented for two years.

► Land area where sustainable land mgt. practices were adopted as a result of proj (Hectare(Ha), Corporate)

	Baseline	Actual (Previous)	Actual (Current)	End Target
Value	0.00	188,318.00	188,318.00	350,000.00
Date	30-Jun-2014	15-Jun-2021	15-Dec-2021	31-Dec-2022

The methodology to monitor this indicator has been reviewed with the PIU in order to align with the initial approach at the project design phase. Indeed, the PIU had decided over the course of the project to account for the total area covered under the Natural Resources Management Plans developed by communities. However, the current Task Team understands that at project design the targets were related to areas covered by actual outputs in terms of tree plantations and exclosures. This is in turn more consistent with the end target of 350,000 ha while the PIU's new approach reported results 10 times larger. Based on the approach revised in June 2021, the actual Land area where sustainable land mgt. practices were adopted as a result of the project is 193,239 ha (55% of the objective) broken down as follows:

Comments:

Comments:

-21,252 hectares of agroforestry plantations. Component 1: 7,458 ha including 4,070 ha under PIREDD Plateau and 4,086 ha under PIREDD Mai-Ndombe; Component 2: 5,493 ha and Component 3: 7,603 ha. -171,987 hectares of exclosures. Component 1: 162,119 including 149,989 ha under PIREDD Plateau (13,944 incl. 9,669 ha supported by PSE (accounting loss), and 136,045 of primary forest identified by communities for conservation) and 12,130 ha under PIREDD Mai-Ndombe; and Component 3: 9,868 ha.
