YOUTH EMPLOYMENT SUPPORT PROJECT
(A World Bank Funded Program)

Resettlement Process Framework (RPF)
August 24, 2010

Prepared by:
Serigne Omar Fye, consultant

Ministry of Finance and Economic Development
Secretariat Building
George Street, Freetown
Glossary of Key Terms

- **Cut-off Date**—refers to a day on and beyond which any person who occupies land required for project use, will not be eligible for compensation. The date is often the day when the assessment of persons and their property in the project area commences.

- **Environmental and Social Management Framework (ESMF)**—report is a safeguards instrument (document) which establishes a mechanism to determine and assess future potential environmental and social impacts of sub projects within a conservancy area, and then to set out mitigation, monitoring and institutional measures to be taken during design, implementation and operation of the project activities to eliminate adverse environmental and social impacts, offset them, or reduce them to acceptable levels. This instrument has been prepared as a separate and stand alone document to be used in conjunction with the RPF.

- **Market rate**—based on commercial terms according to Sierra Leone law for sale of land, materials, agricultural products and other assets and commodities.

- **Project Affected Person(s) (PAPs)**—are persons affected by the land use or acquisition needs of the management committees sub project activities that lead to these person(s) being required either to be physically displaced or relocated due to loss of shelter and or, lose, denied or restricted access and or to economic assets, or lose income sources or means of livelihood, whether or not the person(s) must move to another location.

- **Resettlement and Compensation Plan (RAP)**, is also known as a Resettlement Action Plan or Resettlement Plan - is a resettlement instrument (document) to be prepared when project activities are identified, that require land acquisition that leads to physical displacement of persons, and/or loss of shelter, and/or loss of livelihoods and/or loss, denial or restriction of access to economic resources. RAPs are prepared by the party impacting people and livelihoods in this manner and contain specific and legal binding requirements to be taken by that party to resettle and compensate the affected party before project activities causing this adverse impact are implemented. The RAP must be accepted by the Project authorities and the World Bank before the subproject can be included in the Project.

- **Resettlement Policy Framework (RPF)**, is also a resettlement instrument (this document) that is prepared by the borrower’ (in this case by the Government of Sierra Leone) when project activities that require land acquisition that leads to physical displacement of persons, and/or loss of shelter, and/or loss of livelihoods and/or loss, denial or restriction of access to economic resources, are not identified at the project preparation stage. The RPF is therefore prepared and disclosed before the proposed project is appraised setting out the resettlement and compensation principles, organizational arrangements and design criteria to be applied to meet the needs of the people who may be affected by the project, when project activities are identified. The RAP is prepared consistent with the provisions of the RPF. The term 'borrower’ is a generic term used by the World Bank, and includes recipients, such as the Youth Development Secretariat and the National Youth Commission. The Environment Protection Agency (EPA) etc.

A. INTRODUCTION
The rebel war of the 1990s caused dramatic population redistribution in the country, occasioning severe pressure on land, particularly in the urban areas of Sierra Leone, to which previously rural residents migrated in search of relative security. This sudden increase and concentration of the youth population in Freetown and other big towns exposed the weakness of the previous disjointed approaches to land management and emphasized the urgency to develop a new and comprehensive approach to land management by the introduction of a Land Policy for the country.

A range of statutes have been in place to address specific land management problems. Such statutes included: Act No. 19 of 1960, ‘An Act to make Further Better Provision for the Management and disposal of Crown Lands’, otherwise known as the “State Lands Act”, (as amended), the ‘Protectorate Lands Act’ Cap. 122, Act No. 14 of 1960, the Survey ordinance, Act No 42 of 1961, the Compulsory Acquisition of Property Act Cap. 116 the Public Lands Act, Cap 117 the ‘Unoccupied lands’ Act, Cap 118 the Crown Lands Conservancy Act Cap.119 and 120 the Defense Land Acquisition Act, Cap 121, the Concession Act, Cap 66 the Freetown Improvement Act, Cap 81 and The Town and Country Planning Act among others. These statutes serve as the guide to the current land management practices existing in this country and have stood the test of time to deal with specific land related problems on an ad hoc basis. Efficient land management in this country is however still elusive as the inherent weaknesses in some of the existing legislations have been scrupulously exploited. The Laura Marcus Jones Report commissioned by the Government of Sierra Leone highlighted major issues, key among which were the inadequacies of the existing land laws, the lack of institutionalized approach to land management and the absence of land management audit and control system based on a coherent policy. In order to address the key issues and the recommended reforms, it was decided that a policy framework should be formulated on the basis of comprehensive principles that offer direction for efficient management and use of land.

In 2004, Sierra Leone’s Land Policy was drafted by the Ministry of Lands, Country Planning and the Environment with the intention to serve as a useful guide for the smooth administration of land, and to lay the foundation for ensuring individual and collective interest in the sustainable development of the national territory of Sierra Leone.

This proposed project, The Sierra Leone Employment Support Project, is part of the Government of Sierra Leone’s effort to address the political and social risks associated with youth underemployment and unemployment. As the 2012 elections draw nearer, youth unemployment may increasingly become an issue of peace and stability that needs to be managed.

The specific objective of the project is to increase access to short term employment opportunities and to improve employability of targeted youth. The program seeks to address constraints on the demand and supply side of the labor market namely: (i) to improve technical capacity and promote creation and/or expansion of small youth owned enterprises in economically viable activities: (ii) to improve skills base of young people to make them more employable; and (iii) to provide a safety net and income supplement for the most vulnerable youth through public works.
The program is expected to reduce social pressures and the risk of conflict by providing employment support to 45,000-50,000 vulnerable youth over a period of three years. The Project will finance a package of short term to medium term interventions and build on successes of existing youth employment support programs. It will also provide institutional support to national structures, and finance policy studies and analysis to support effective national coordination of youth employment support initiatives.

To achieve these objectives, the project has three main components as follows:

**Component 1: Cash for Works:** This component will support a labor intensive public works program which will provide short term employment to young people through rehabilitation and/or improvement of key economic infrastructure and/or other priority public works. The works will be chosen from amongst three areas: road rehabilitation and maintenance; agriculture; and renewable energy/environmental management. The component will train and support apportion of the youth groups participating in the program as contractors to acquire improved technical skills and be able to operate independently following the program continuing to employ unskilled youth. As part of the program, all beneficiaries will also receive a life-skills training package. An impact evaluation will be integrated into the design of the component to measure the impact of the income support and skills training on the participating beneficiaries/households.

**Component 2: Skills Development and Employment Support:** This component will test approaches to support young individuals and youth groups who either have established businesses or are interested in pursuing business/employment opportunities through a package of technical assistance which will consist of apprenticeship, business development support and coaching, literacy/numeracy, and other life skills. The program will provide employability support and business development around agriculture and any other economically viable activity (to be demonstrated by market demand). An impact evaluation will be integrated into the design of the component to measure the success of this approach in improving employability and livelihoods of participating beneficiaries.

**Component 3: Institutional Support and Policy Development:** This component will support the Government of Sierra Leone to operationalize the Youth Commission such that it is effectively able to coordinate the youth agenda and provide policy guidance to various key ministries, agencies and implementing partners. It will also enable key ministries and agencies (such as labor and employment, agriculture, and trade and commerce and education, youth and sports) to work effectively with the Youth Commission to provide technical inputs into project implementation and overall implementation of the Government of Sierra Leone youth agenda. The component will also assist the GoSL to develop policy responses in various issue areas through further analytical work on labor markets, skills certification, monitoring and evaluation of existing programs and setting up of systems to assist in the identification and follow up of beneficiaries. The component will also finance knowledge management and learning events to promote the interests of youth. This component will be financed in parallel by the UNDP who is expected to continue to support the YES Secretariat and the eventual NYC.
Specifically under Component 1 the Cash for Works Program, the positive list of sub projects to be funded include the following primary activities: road rehabilitation and maintenance, agriculture, renewable energy, environmental management and waste disposal.

The World Bank Safeguard policy OP 4.12 is triggered only when people are being affected by physical displacement, or when the project activity causes land acquisition, where by a physical piece of land is needed and people may be affected because they are cultivating on that land, they may have buildings on the land, they use the land for water and grazing of animals or they may otherwise access the land economically, spiritually or any other way which may not be possible during and after the project is implemented.

Under Component 1 therefore, for certain type of sub projects, swamp and communal land within a conservancy could be used to locate new infrastructure, or access could be restricted or denied due to sub project activities. Likewise, for forests/woodlands sub projects, promoting the sustainable use and management of forest ecosystems in a conservancy would also require either the loss, denial or restriction of access to certain areas of a forest or woodland, although the intention of the project is to facilitate change in access to resources only in the context of changes in support of sustainable resource management and use, with the consent of the membership of a youth group, women’s groups and or community groups.

Sierra Leone has a land area of approximately 72,000km² and a population of 4.96 million people with a high density compared to any other country in West Africa. Certain regions of the country carry the bulk of the population including the Freetown peninsula the Kono, Kenema and Bo districts while the northern part of the country is sparsely populated. With this in mind, significant efforts must be made in the design and screening stages of the sub projects to select sites to avoid or minimize impacts on people, land, property, including peoples access to natural and other economic resources, as far as possible. Notwithstanding, land acquisition or land use by some sub projects recipient communities to support their planned activities under the project, may lead to the physical or economic displacement of people or their loss, denial or restriction of access to economic resources and therefore ultimately to resettlement. Compensation of people may potentially be required, although none of the anticipated sub projects will be designed to result in loss or restriction to access to any resource. When this occurs, the World Bank Operational Policy OP 4.12 on Involuntary Resettlement and certain laws of Sierra Leone will be triggered. This may be possible because of the high density, the uneven and varying settlement patterns and population densities across Sierra Leone. All sites for project intervention will be selected with community consent i.e. Councils and community youth and women groups as well as other interested groups. Environmental management and energy type sub projects will be sited only with the consent of the relevant communities, chieftdoms, Regional and District Councils and other relevant structures.

Land use, expropriation and administration in post war Sierra Leone are highly emotive issues, as there is an overwhelming disproportionate distribution of land and the Government of Sierra Leone is taking positive steps to address these issues through a combination of appropriate land polices and legislation. Special care should be taken during the implementation of sub project activities that require land acquisition /use that adversely affect people and their economic resources. None of the sub project activities under the Youth Employment and Support Project will be designed to create adverse effects. To the contrary all sub projects will be designed to
benefit communities. The project is intended to assist the vulnerable youth of Sierra Leone to enhance their economic benefits from the sustainable use of the resource base.

At this stage the Government of Sierra Leone is not required to prepare a Resettlement Action Plan since the sub project activities have not yet been identified and therefore their lands needs have consequently not been determined. However, the Government of Sierra Leone is required by the World Bank to prepare a Resettlement Policy Framework (RPF) to be publicly disclosed in Sierra Leone and at the InfoShop of the Bank six months before project effectiveness as this is an emergency project under OP 8.0.

The RPF establishes the resettlement and compensation principles, organizational arrangements and design criteria to be applied to meet the needs of the people who may be affected by the project. The RPF is prepared to the standards of the Government of Sierra Leone own laws and policies on resettlement and the policy of the World Bank, OP4.12.

When specific planning information on the subprojects becomes available and the land/forest/woodland areas needed and/or affected are identified, for the sites that trigger OP 4.12, resettlement/compensation plans will be closely coordinated with the planning and implementation of civil works and then subsequently prepared consistent with this policy framework by the implementation agencies and will be submitted to the Bank for approval before any land acquisition, resettlement, loss, denial of, and restriction to economic resources or any other impact on livelihood occurs.

This RPF governs all activities funded under the Youth Employment and Support Project and is to be used in conjunction with the Environmental and Social Management Framework (ESMF) that has also been prepared for this project as a separate stand alone document, also disclosed at the Bank info shop and in Sierra Leone.

This RPF covers the following sections;

B. Principles and objectives governing resettlement preparation and implementation.

C. A description of the process for preparing and approving resettlement plans.

D. Land acquisition and likely categories of impact.

E. Eligibility criteria for defining various categories of project affected persons.

F. A legal Framework reviewing the fit between the laws of Sierra Leone and regulations and Bank policy requirements and measures proposed to bridge any gaps between them.

G. Methods of valuing affected assets.

H. Organizational procedures for the delivery of entitlements, including, for projects involving private sector intermediaries, the responsibilities of the financial intermediary, the government, and the private developer.
I. A description of the implementation process, linking resettlement implementation to civil works.

J. A description of the grievance redress mechanisms.

K. A description of the arrangements for funding resettlement, including the preparation and review of cost estimates, the flow of funds, and contingency arrangements.

L. A description of mechanisms for consultations with, and participation of, displaced persons in planning, implementation, and monitoring.

M. Arrangements for monitoring by the implementation agency and, if required, by independent monitors.

This RPF is to be used in conjunction with the Environmental and Social Management Framework (ESMF) and the Integrated Pest Management Plan that has all been prepared for this project as separate stand alone documents, also disclosed at the Bank info shop and in Sierra Leone.

B. PRINCIPLES AND OBJECTIVES GOVERNING RESETTLEMENT PREPARATION AND IMPLEMENTATION.

The impacts due to involuntary resettlement from development projects, if left unmitigated, often gives rise to severe economic, social and environmental risks resulting in production systems being dismantled, people facing impoverishment when their productive skills may be less applicable and the competition for resources greater; community institutions and social networks being weakened; kin groups being dispersed; and cultural identity, traditional authority, and the potential for mutual help are diminished or lost. The World Bank Safeguard policy OP 4.12 is not triggered only when people are being affected by physical displacement. It is also triggered when the project activity causes land acquisition, whereby a physical piece of land is needed and people may be affected because they are cultivating on that land, they may have buildings on the land, they use the land for water and grazing of animals or they may otherwise access the land economically, spiritually or any other way which may not be possible during and after the project is implemented. In all these cases, affected people are compensated for their loss (of land, property or access) either in kind or in cash of which the former is preferred.

Therefore, the objectives of this policy are the following:

(i) Involuntary resettlement, land acquisition, and access restrictions should be avoided where feasible, or minimized, exploring all viable alternatives.

(ii) Where involuntary resettlement, land acquisition, or restriction of access is unavoidable, resettlement and compensation activities should be conceived and executed as sustainable development programs, providing sufficient investment resources to give the persons displaced by the project the opportunity to share in the project benefits. Displaced and compensated
persons should be meaningfully consulted and should have opportunities to participate in planning and implementing resettlement programs.

(iii) Displaced and compensated persons should be assisted in their efforts to improve their livelihoods and standards of living or at least to restore them, in real terms, to pre-displacement levels or levels prevailing prior to the beginning of project implementation, whichever is higher.

Affected people, according to the Bank Safeguard Policy OP 4.12, refers to people who are directly affected socially and economically by the bank assisted investment projects, caused by:

(a) The involuntary taking of land and other assets resulting in:

   a. Relocation or loss of shelter

   b. Loss of assets or access to assets

   c. Loss of income sources or means of livelihood, whether or not the affected persons must move to another location;

   or

(b) The involuntary restriction or access to legally designated parks and protected area’s results in adverse impacts on the livelihood of the displaced persons.

The Bank Safeguard Policy OP 4.12 applies to all components under the project; whether or not they are directly funded in whole or in part by the Bank.

The policy applies to all economically and/or physically displaced persons regardless of the total number affected the severity of impact and whether or not they have legal title to the land. Particular attention should be paid to the needs of vulnerable groups in general and youth groups in particular among those economically and/or physically displaced; especially those below the poverty line; the land less, the elderly, women and children, indigenous groups, ethnic minorities and other historically disadvantaged groups or other economically and/or physically displaced persons who may not be protected through provisions in Sierra Leone’s legislation concerning compensation for land.

In particular for the Youth Employment and Support Project, the policy also requires that individual resettlement plans be implemented before the implementation of the sub project activities requiring land acquisition/land use, to ensure that displacement or restriction to access does not occur before necessary measures for resettlement and compensation are in place. It is further required that these measures include provision of compensation and of other assistance required for relocation, prior to displacement, and preparation and provision of resettlement sites with adequate facilities, where required. In particular, the taking of land and related assets may take place only after compensation has been paid; where applicable, resettlement sites, new homes, related infrastructure, public services and moving allowances have been provided to economically and/or physically displaced persons as the case may be; or when alternative
income producing measures have been put into place to provide the income provided by assets to be lost. Furthermore, where relocation or loss of shelter occurs, the policy further requires that measures to assist the physically displaced persons are implemented in accordance with the resettlement plan of action.

To determine the potential impacts, consideration must be given to the distinct project management entity that the Youth Employment Support Project is designed to support. The distinct project management entity is the National Youth Commission and the associated groups. The sub project proponents i.e. the Youth Groups, Farmers groups, District Councils and other affected groups would develop or up-grade their Community Management Plans (CMPs) which would provide the overall development objective for the groups and contain multiple subproject activities to achieve this objective. The National Commission of Social Action (NaCSA) will continue to take the lead role in the implementation of the Cash for Works Program and the communities through Project Oversight Committees and the local councils will be involved in the monitoring of project activities. NaCSA would set the parameters for resource utilization eg. rangeland management (e.g. use of fire, combating soil erosion, positioning of water points, etc). Whereas, the Youth Employment Support Project will not fund all activities in a given District, the principles of OP 4.12 will apply not only to sub project activities in a District funded by the youth project but will also apply to those sub project activities within the same District that are funded by other donors.

The impacts from sub project activities are likely to be positive as they will result in sustainable use of natural resources, improved environmental management raise rural incomes (both individual and household incomes) and hence livelihoods. However, some adverse impacts are possible on some community members, individuals, or households restricted due to zoning of areas, from access to grazing land, fishing areas, water resources or other economic resources. Adverse impacts may also occur, if production cost is increased or incomes reduced due to alteration of access rights, distance, timing etc.

In these cases, individuals, households and communities may/will be impacted and resettlement and compensation cannot be avoided and OP 4.12 will be triggered even though no one may have to physically move or relocate to another location. The potential for conflicts between those affected in this way and other beneficiaries within a community does exist. It is particularly important therefore, to neutralize to the extent possible any socioeconomic pressures in the communities that are likely to be exacerbated by involuntary resettlement, by facilitating the participation of those impacted in the sub project activities. Obtaining consensus by community members on all site-based project interventions should be built into the design of sub projects. Therefore, offering impacted people the opportunity to continue to participate in the planning process that would lead to the preparation of Resettlement Plans is mandatory and Section L of this RPF deals with this requirement.

Offering impacted people the opportunity for employment within sub project activities or for participation in income generating activities will provide tangible measures to ensure they also benefit from project activities. Capacity building and technical assistance opportunities available within the YESP project should also be targeted at project impacted people.
Furthermore, it is worth noting that an influx of people to selected land/sites and forest areas may occur by those wishing to take advantage of the rules of eligibility described earlier in this section. Were this to happen it would bring to bear additional pressures on the whole planning process and compensation budgets. This has major considerations therefore, when establishing the cut-off dates. The establishment of cut-off dates is discussed in Section E.

A major objective of this RPF is to ensure that project affected persons are meaningfully consulted, have participated in the planning process, are adequately compensated to the extent that at least their pre-displacement incomes have been restored and that the process has been a fair and transparent one.

C. DESCRIPTION OF THE PROCESS FOR PREPARING AND APPROVING RESETTLEMENT PLANS.

As stated earlier, the World Bank policy on Involuntary Resettlement OP 4.12 is triggered because the Youth Employment Support (YESP) Project will finance productive investments that may require land acquisition and/or land use leading to loss, denial or restriction of access to economic resources. Since the location of all these sites during the 3-year project period are not known at the time of the preparation of the project, the preparation and disclosure of this RPF by the Government of Sierra Leone is a conditionality for project effectiveness. During implementation of this project, in a process defined here below, the selection of these sites would be made. When that happens, land would be acquired or access to economic resources may be lost, denied or restricted and people may then be affected. At that stage, OP 4.12 calls for the preparation of individual Resettlement Plans that must be consistent with this RPF.

To address the impacts under this policy, resettlement plans must include measures to ensure that the displaced persons are:

(a) Informed about their options and rights pertaining to resettlement.

(b) Consulted on, offered choices among, and provided with technically and economically feasible resettlement alternatives.

(c) Provided prompt and effective compensation at full replacement cost for losses of assets and access attributable to the project.

(d) Enabled to restore and preferably improve their living standards compared to pre-project ones.

Therefore, the first stage in the process of preparing the individual resettlement plans is the screening process to identify the land acquisition and land use needs that will cause resettlement. The resettlement and compensation plans will contain the analysis of alternative sites undertaken during the land screening process.
The land screening process presented here below is designed to be part of the Project Oversight Committee planning stage, thereby ensuring that their sub project proposals presented to the National Youth Commission for funding also complies with the requirements of OP 4.12 and the laws of Sierra Leone relating to land acquisition/use and resettlement.

The Land Selection Screening Process

**Step 1:** Management Committees using participatory techniques mobilize their community members to develop a Business Plan (BP) using the conservancy areas as the physical planning unit on the basis of the existing CMP. The management committees would be assisted by their service providers throughout this process.

**Step 2:** As part of the Plan, the physical planning unit will be divided into zones/areas to thereby, stating/illustrating where certain types/groups of activities are designed to take place for the benefit of all. These activities are to be implemented in the form of multiple sub projects using the community demand driven (CDD) principle of participation/implementation.

**Step 3 :** The Community Management Plan and BP will for each zone, contain specific planning information on sub project activities in the form of engineering and other technical details, land use needs and routes required, etc.

**Step 4:** When this information becomes available, the Management Committee with continued assistance of its service providers and using participatory techniques, makes the following evaluation based on Fig. 1 to determine which pieces of land, if any, within a zone in their District, is affected by resettlement issues and hence OP 4.12

**Step 5:** The use of land that triggers OP 4.12 should be avoided where possible, by rerouting, re-zoning, choosing alternative sites, etc.

**Step 6:** For situations where resettlement or restriction of access cannot be avoided, OP 4.12 will apply. For each parcel of land that has potential PAPs, so determined using the process described above, the cut-off date5 will be immediately established using participatory methods again, acceptable according to local traditions.

**Step 7:** For each parcel of land that has potential PAPs, the Management Committee will request its service providers to carry out (i) a socio-economic study and (ii) a census to identify the potential PAPs on the individual, household and vulnerable group’s level and to calculate their household incomes, as the first step in the preparation of the RAPs.

**Step 8:** On completion of the socio-economic study and the baseline census the Management Committee will prepare a Resettlement and Compensation Plan (RAP) for each site/parcel of land that is affected by resettlement and compensation. There will be as many RAPs as there are affected parcels of land.

Where the impacts on the entire displaced population are minor (i.e. if affected people are not physically displaced and less than 10% of their productive assets are lost) or fewer than 200
people are displaced per physical planning unit (i.e. conservancy), then the bank may approve the preparation of short Resettlement Plan (ARAP) that reflects the requirements of this RPF. The minimum contents of such a short RAP are to be:

(a) A census survey of displaced persons and valuation of assets.

(b) Description of compensation and other resettlement assistance to be provided;

(c) Consultations with displaced people about acceptable alternatives;

(d) Institutional responsibility for implementation and procedures for grievance redress in the specific area in question;

(e) Arrangements for monitoring and implementation of the subproject, and;

(f) A timetable and budget.

The significance of establishing a cut of date is discussed in Section E. The purpose of the socio-economic study is to collect base line data within the chosen/targeted sites/areas thereby enabling the social assessment of potentially affected populations/communities. The socio-economic study would focus on the identification of stakeholders (demographic data), the participation process, identification of affected people (including owners and users of land) and impact on their property and their production systems, the institutional analysis and the system for monitoring and evaluation. Detailed calculation of individual and household economies and identification of all impacts will be undertaken as part of the socio-economic study and be the determinant in the potential compensation process. Standard characteristics of the affected households, including a description of production systems, labor, and household organization, and baseline information on livelihoods (including production levels and incomes derived from both formal and informal economic activities) and standards of living and health status of the PAPs. Under this study a comprehensive base line census would be carried out to identify potentially affected people on the individual and household levels, vulnerable groups (women, children, the elderly, female headed households, farm workers, HIV/AIDS affected persons etc.) and to discourage inflow of people ineligible for assistance.

For impacts that are not considered minor, the preparation of a Resettlement Action Plan (RAP) is required for each site. World Bank OP 4.12 article 25 and Annex A sets the requirements of the RAP to include;
(a) Description of the sub-project;
(b) Potential Impacts;
(c) Objectives;
(d) Socioeconomic Studies;
(e) Institutional Framework;
(f) Eligibility, if different from the issues in the overall RPF;
(g) Valuation of and compensation for losses;
(h) Resettlement measures, including plans to restore any income that may be lost from any assets or natural resources to be lost;
(i) Site selection, site preparation, and relocation;
(j) Housing, infrastructure, and social services;
(k) Environmental protection and management;
(l) Community participation;
(m) Integration with host populations;
(n) Organizational responsibilities for the sub-project;
(o) Implementation schedule;
(p) Cost and budget;
(q) Monitoring and evaluation;

The RAPs cover the elements above, as relevant. When any element is not relevant to the management committee’s circumstances, it should be noted in the RAP.

**Step 9:** The RAPs would then be forwarded for screening and approval to the respective Regional and District Land Boards, the Ministry of Lands and the National Youth Commission in compliance with the local planning laws and project institutional and administrative requirements. All sub project activities that trigger OP4.12 and their resettlement plans would be subject to the final approval of the World Bank to ensure compliance with bank safeguards. This will ensure that before land is actually acquired or access to resources is lost, denied or restricted, that the individual resettlement plans are consistent with this RPF.

For the World Bank to approve funding for any sub project activities that needs to acquire or use land to support proposed investments under this project, the management must first comply with all local laws and seek clearance of the local authorities to use/acquire the land for that purpose, consistent with the provisions of this RPF. For investments on land that is already owned or in use by the management committee pre-project, the World Bank will only approve funding once it is satisfied that the provisions of this RPF were met in cases where OP 4.12 apply.

Furthermore, the Regional and District Project Oversight Committees, the National Youth Commission and the National Commission for Social Action should as a guide consider the cumulative factor and not approve multiple sites that have individual high impact intensity. For example, where land acquisition is required to such an extent that it would require more than 20% of a community's or individual's total land under use or when the mitigation measures are so cumbersome that their efficacy cannot be pre-determine or they cost more than 15% of the investment budget.

Before the decision to approve a site is taken, the Implementing Agency i.e. the NaCSA the National Youth Commission and the Youth Secretariat would need to approve or disapprove the resettlement and compensation plans of the project proponent’s proposed investments in totality with the overall environmental and social screening process that has been applied for each of their proposed investments and to also approve or disapprove of the proposed mitigation measures, if any. Capacity will be built at the level of the Regional and District Land Boards, the Ministry of Lands and at the Environment Protection Agency as well as amongst the local communities, by providing technical assistance to allow the Project Oversight Committees to
screen their proposed sub project investments for environmental and social concerns. This training will also include the capacity to develop mitigation measures to meet environmental and social impacts and to prepare implementation of such measures. This would build capacity at the level of the NaCSA regional and district offices as well as the Regional Environment Offices and their local communities with regards to environmental and social safeguards issues, which is crucial for success of this project.

D. LAND ACQUISITION AND LIKELY CATEGORIES OF IMPACT

Until the exact sub project locations are determined it will not be possible to estimate the likely number of people who may be affected since the technical details of the sub projects have not yet been developed and are unknown. However, the likely displaced (economically or physically) persons can be categorized into these 3 groups, namely:

(I) **Affected Individual** - An individual who suffers loss of assets or investments, land and property and/or access to natural and/or economical resources as a result of the project activities and to whom compensation is due. For example, an affected individual is a person who farms a land or works and lives on a farm, pastoralists whose routes have been altered, or a person who has built a structure on land that has been demarcated and is now required by the sub project. This will include affected individuals who have economic activity on communal land or on project land.

(II) **Affected Household** - a household is affected if one or more of its members is affected by project activities, either by loss of property, land, loss of access or otherwise affected in any way by project activities. This provides for:

(a) Any members in the households, men, women, children, dependent relatives and friends, tenants;

(b) Vulnerable individuals who may be too old or ill to farm along with the others;

(c) Members of households who cannot reside together because of cultural rules, but who depend on one another for their daily existence;

(d) Members of households who may not eat together but provide housekeeping, or reproductive services critical to the family’s maintenance, and

(e) Other vulnerable people who cannot participate for physical or cultural reasons in production, consumption, or co-residence.

In the local cultures, members of production, consumption, and co-resident groups form overlapping, often incongruent sets of people who may exchange domestic or farming services on a regular basis even though living separately. Compensation will not be limited to people who live together in a co-resident group, since this might leave out people whose labor contributions are critical to the functioning of the "household". For example, among polygamous settings, each wife has their own home.
(III) Vulnerable Households: in Sierra Leone because of the ravaging effects of the Rebel war and the long struggle to establish peace in the country, vulnerable households may have different land needs from most households or needs unrelated to the amount of land available to them. They may already be undergoing some form of rehabilitation including training to acquire vocational skills in purpose built centers. However, the following particularly vulnerable groups need special attention:

a) Landless Residents on Communal Lands- this group have little or no usufruct rights, are often the poorest of the poor, destitute, unskilled, unemployed and unemployable and often shunned by rest of contemporary society.

b) Ex-soldiers and combatants- from the struggle for peace many have been successfully demobilized and re-integrated into society, but some remain vulnerable because they have physical disabilities, and have lost family members who supported them.

c) AIDS afflicted persons - a relatively high percentage of the poor and youth population are living with HIV or are terminally ill with AIDS. Many are beneficiaries of numerous health programs from government (central and local), international organizations and the NGO community.

d) Orphans - due to the impacts of the rebel war of the 1990s and AIDS crisis that plagues Sierra Leone today, there are a considerable number of orphaned children, whose parents have died from aids. These children today fall into three categories of care; (i) those being looked after by an uncle, aunt, grandparents or other close relative, (ii) those being looked after by the government, local authorities or NGOs and (iii) those living alone and providing for themselves and other siblings. These children are more vulnerable since they are often "voiceless" because they have no parents to defend or stand up for them and also because they are considered too young to be heard Orphaned children engage in any form of economic activity to provide for themselves and their siblings by engaging in activities such as paraffin selling, artisanal mining, water selling, exploitative employment etc.

f) Despite the laws of Sierra Leone and the International Labor Organization (ILO) prohibiting the exploitation of children, it is a reality that street children are either in paid employment or are on the streets in some areas in Sierra Leone in particular big cities like Freetown, Bo, Kenema and other big cities. They tend to live in close proximity to large towns and cities.

Children in e) and f) above should they become impacted by this project in a way that means they have to be physically relocated, their compensation cannot be in cash. They would have to be put in a program or registered with one of the many children’s charities that are operating in Sierra Leone today. Their compensation would take the form of paying for their rehabilitation and training to acquire useful vocational skills.

g) Women headed households-may depend on husbands, sons, brothers or others for support. During the war, young men were forced into rebel groups and were forced to go into the bush fell victims of the political liberation process and lost their lives and for many other reasons ,
leaving behind many women headed households which to some extent still exist. In other cases too, women are the main breadwinner in their household even where the men have remained with the family. Women therefore need relatively easy access to health service facilities, as mothers and wives; for example, where the land being acquired is used by a woman with no formal rights to it or a woman who is dependent on a man other than her husband for her primary income. These women should not be resettled in a way that separates them from their households as the very survival of their households may depend on them. Their compensation must take into account all these factors.

**h) Youth** - farm or work as long as they are able. Their economic viability may depend on how much land they farm or how much they produce because, by producing even small amounts of food to "exchange" with others, they can subsist on cooked food and generous return gifts of cereal from people such as their kith and kin and neighbors. Losing land will affect their economic viability. What would damage their economic viability even more than losing land is resettlement that separates them from the person or household on whom they depend for their support. The definition of household by including dependents avoids this.

These household types are not mutually exclusive, so that an orphaned child may be a landless resident on communal lands and the youth may be an ex-combatant, etc. These groups are being identified as particularly vulnerable so that special attention would be paid to them by identifying their needs from the socio-economic and baseline study so that (i) they are individually consulted and given the opportunity (i.e. not left out) to participate in the project activities, (ii) that their resettlement and compensation is designed to improve their pre-project livelihood (iii) special attention is paid to monitor them to ensure that their pre-project livelihood is indeed improved upon (iv) they are given technical and financial assistance if they wish to make use of the grievance mechanisms of the project and (v) decisions concerning them are made in the shortest possible time.

**E. ELIGIBILITY CRITERIA FOR DEFINING VARIOUS CATEGORIES OF PROJECT AFFECTED PERSONS**

The Bank’s OP 4.12 suggests the following three criteria for eligibility;

a) Those who have formal rights to land (including customary/communal land, traditional and religious rights, recognized under Sierra Leonean Law).

b) Those who do not have formal legal rights to land at the time the census begins but have a claim to such land or assets provided that such claims are recognized under the national and local laws of Sierra Leone or become recognized through a process identified in the resettlement plan.

c) Those who have no recognizable legal right or claim to the land they are occupying, using or getting their livelihood from.

Those covered under a) and b) above are to be provided compensation for the land they lose, and other assistance in accordance with the policy. Persons covered under c) above are to be
provided with resettlement assistance in lieu of compensation for the land they occupy, and other assistance, as necessary, to achieve the objectives set out in this policy, if they occupy the project area prior to a cut-off date established by the Youth Commission and other implementing agencies in close consultation with the potential PAPs, local community leaders and the respective District and Regional Councils and NaCSA. Persons who encroach on the area after the cut-off date are not entitled to compensation or any other form of resettlement assistance. All persons included in a), b) or c) above are to be provided with compensation for loss of assets other than land.

Therefore, it is clear that all project affected persons irrespective of their status or whether they have formal titles, legal rights or not, squatters or otherwise encroaching illegally on land, are eligible for some kind of assistance if they occupied the land before the entitlement cut-off date. Persons who encroach the area after the socio-economic study (census and valuation) are not eligible for compensation or any form of resettlement assistance.

Eligibility for Community Compensation

Communities (on communal lands) permanently losing land and/or access to assets and or resources under statutory or customary rights will be eligible for compensation. Example of community compensation could be for public toilets, market place, taxi parks, schools and health posts. The rationale for this is to ensure that the pre-project socio-economic status of communities where adversely impacted, is also restored.

Method to Determine the Cut - Off Dates

The entitlement cut-off date refers to the time when the enumeration of persons and the inventory of their property and income sources in the identified project areas are carried out, i.e. the time when the management committees have identified the land sites they would need and when the socio-economic study is taking place. Thereafter, no new cases of affected people will be considered except through accepted grievance mechanisms for such cases as migrant workers or others away from the area being considered at the time of the inventory and enumeration. Unfinished structures would be identified and secured, and unused materials will be piled at the site so that the cut-off survey can estimate investment which should be compensated for in lieu of expenses (including labor) incurred until the cut-off date.

The establishment of a cut-off date is required to prevent opportunistic invasions/rush migration into the chosen land thereby posing a major risk to the project. Therefore, establishment of the cut-off date is of critical importance. Because the time period between the cut-off date and the time actual productive investments (civil works, etc.) would start bearing also in mind that only after PAPs have been compensated and any replacement structures built according to the requirements of this RPF, is likely to be anytime period from six months on, special attention needs to be taken to secure the sites from rush and opportunistic invasion. These measures could include close consultation with the recognized PAP’s, signs that inform general public of intended use of site, security patrols to identify opportunistic invaders etc.

This date is to be chosen in close consultation with the Regional and District Councils and Traditional Leaders and the National Youth Commission, as soon as possible after the affected
land is identified. This process must be in full compliance with the conflict resolution mechanisms in this RPF and this date must be communicated effectively to the potential PAP’s and surrounding local communities.

The local community and traditional chiefdoms will play a crucial role in identifying users of land.

F. A LEGAL FRAMEWORK REVIEWING THE FIT BETWEEN THE LAWS AND REGULATIONS OF SIERRA LEONE AND BANK POLICY REQUIREMENTS AND MEASURES PROPOSED TO BRIDGE ANY GAPS BETWEEN THEM.

Freetown is the capital of Sierra Leone. Administratively, Sierra Leone is divided into 4 regions and 14 districts which are: Kailahun, Kenema, Kono, Koinadugu, Bombali, Yonkolili, Kambia, Port Loko, Bo, Bonthe, Pasehun, Moyamba, western urban and western rural. The Constitution of Sierra Leone provides for administration of land in Sierra Leone to be by Statutory Law and Customary Law. Generally, statutory laws apply to land in urban areas and Customary Laws to rural/communal lands.

The Draft Land Policy of 2004 is the first time in the history of Sierra Leone that a Comprehensive land policy is being formulated. Hitherto, land in Sierra Leone has been managed through various legal instruments and customary practices applied through the court system. This approach to land management did not provide the basis for a comprehensive overview to assess the social and environmental implications of the dynamics of land ownership, acquisition procedures and the use to which land is put.

A range of statues have been in place to address specific land management problems and such statutes have included:

- The State Lands Act (1960);
- The Protectorate Lands Act;
- The Compulsory Acquisition of Property Act;
- The Public Lands Act;
- The Unoccupied Lands Act;
- The Crown Lands Conservancy Act;
- The Defense Lands Acquisition Act;
- The Concessions Act;
- The Freetown Improvement Act;
- The Town and Country Planning Act,
- The Forestry Act;

These statutes serve as the guide to the current land management practices existing in Sierra Leone and have stood the test of time to deal with specific land related problems on an ad hoc
basis. Efficient land management in Sierra Leone is however still elusive as the inherent weaknesses in some of the existing legislations have been scrupulously exploited, as in the instance of “The Statutory Declarations Act “ of 1835, a received legislation, the abuse of which can be attested to by the numerous land litigation cases in the courts.

The Draft National Land Policy of Sierra Leone.
The 1999 Laura Marcus –Jones report which was commissioned by the Government of Sierra Leone highlighted major issues, key among them were the inadequacies of the existing land laws, the lack of institutional approach to land management and the absence of a land management audit and control system based on a coherent policy. Based on recommendations from various experts who studied the report, the Ministry of Lands, Country Planning and the Environment thought that it was long overdue and decided to embark on the formulation of a National Land Policy on the basis of comprehensive principles that offer direction for efficient management and use of land.

The Policy provides the foundation for the review of existing laws and the enacting of new ones to create the enabling environment to accommodate the rapid economic development programs and plans of the Government of Sierra Leone in general and specifically, to regulate and streamline access to, and the use of land in order to ensure development of a sustainable environment.

The policy seeks to address some of the fundamental problems associated with land management in the country including general indiscipline in the land market, characterized by land encroachments, falsification of documents, multiple land sales and registration, unauthorized use of the land, haphazard development, improper survey practices, indeterminate local authority and chiefdom boundaries, resulting from lack of reliable maps and plans, rampant encroachment on, and illegal acquisition of large tracts of Government Land which have either not been surveyed, registered and otherwise protected, or have not been utilized; a weak land administration system and conflicting land uses, such as, the activities of mining companies, which leave large tracts of land denuded as against farming, which is the economic mainstay of the rural populations, and the time consuming land litigations, which have crowded out other cases in the courts.

To ensure sustainable land use in Sierra Leone, the draft policy outlines the following:

1. The use of any land in Sierra Leone for sustainable development, the protection of water bodies and the environment and any other socio-economic activity will be determined through national land use planning guidelines based on sustainable principles in the long term national interest.
2. All land declared for forests reserves, strict nature reserves, national parks, wild life sanctuaries and similar land categories constitute Sierra Leone’s permanent forest and wildlife estates, and are fully protected for ecosystem maintenance, biodiversity conservation and sustainable timber production.
3. Fully protected areas as well as timber and wildlife protected areas may be used for the purposes of education, research, recreation and tourism, provided that such uses are compatible with the conservation of the environment.
4. Land categories outside Sierra Leone’s permanent forest and wildlife estates are available for such uses as agriculture, timber, mining and other extractive industries, and human settlement within the context of a national land use plan.

5. Inland and coastal wetlands are environmental conservation areas and the following uses considered incompatible with their ecosystem maintenance and natural productivity are strictly prohibited: (a) Physical draining of wetland waters; (b) Damming of streams and water courses feeding wetlands; (c) Haman settlements and their related infrastructural development in wetlands; Disposal of solid and effluents in wetlands; (d) Mining in wetlands.

6. Use of wetlands for farming, grazing, fishing, timber production and salt wining will be encouraged provided that such uses tend to conserve the ecosystem, biodiversity and sustainable productivity of wetlands.

7. In general, land use involving mining, other extractive industries, mechanized agriculture, cattle ranching, dairy farming and manufacturing industry will have to conform to prescribed environmental conservation principles and guidelines.

8. Land development planning of the purposes of human settlement, industry, large scale intensive agriculture or their expansion will have to make adequate provisions, among others, for: (1) population density; (2) Settlement location and pattern preference; (3) Direction for spatial growth; (4) Physical and social infrastructural development or expansion; (5) Land and other environmental conservation requirements; (6) Provisions for persons displaced by such development.

9. All land and water resources development activities must conform to the environmental laws of Sierra Leone and where Environmental Impact Assessment report is required this must be provided and environmental protection within the polluter pay principle will be enforced.

Provided that payment of adequate compensation in reasonable time will be made, government may require land wherever and whenever appropriate to among other things: (a) Secure and control areas of urban expansion; (b) Facilitate urban renewal and redevelopment programs; (c) Implement any rural or urban improvement program; (d) Provide social infrastructure (e) Supply promptly serviced or un-serviced lands prices, which can secure, socially and economically acceptable patterns of economic development; (f) Provide for the purposes of national defence, national security, national health and conflict resolution; (g) Protect areas of historical, cultural or ecological interest.

Conflict with respect to land use will have to be resolved at local, district, regional or national level before any economic land use activity commences.

**Security of Tenure and Protection of Land Rights.**

The draft policy addresses issues related to land tenure and physiographic land forms, namely communal land, private owned land farmland, proclaimed state land, urban areas and wetlands. The policy objective is to ensure that every socio economic activity is consistent with sound land use practices through sustainable land use planning in the long term national interest and to also facilitate equitable access to and security of tenure.
of land based on registered land. It seeks to promote community participation and public awareness at all levels in sustainable land management and development practices to ensure the highest and best use of land, and thereby guarantee optimum returns on land.

(a). With the full participation of traditional and customary land owners, the National Land Policy seeks to undertake tenure reform process, which documents and recognizes the registration and classification of titles under:

- The allodia owner;
- Customary law freeholder;
- An estate of freehold vested in possession or an estate or interest less than freehold under common law;
- Leasehold interest;
- Interest in land tenure by virtue of any right contractual or share cropping or customary tenancy arrangement.

(b) Speed up title registration to cover all interest in land throughout Sierra Leone, and phase out deeds registration;

(c) Pursue the following actions to resolve or minimize land tenure disputes and their associated ethnic conflicts;

(d) Implementation of a program for the production of a large scale maps of land parcels and building in all urban areas and locations, where disputes are prevalent;

(e) Enactment of legislation to require individual, traditional, family and other land owners to survey and demarcate their land boundaries with the approval of the Survey Department;

(f) Establishment of an Early Warning Mechanism to detect potential areas of land disputes for the purposes of taking preventive measures.

The principal aim of the policy is the judicious use of the nation’s land and all its natural resources by all sections of Sierra Leone society in support of various socio-economic activities undertaken in accordance with sustainable resources management principles and in maintaining viable ecosystems. The policy also seeks to encourage the rational and integrated planning and management of wetlands for the preservation of biological diversity, the maintenance of natural life support systems and sustainable resource use. It requires the establishment of a national inventory and quantitative assessment of wetland resources, the identification of the benefits and values of wetlands and the regulated use of their flora and fauna. It further requires that proper environmental assessments be undertaken before and during the execution of development projects on wetlands. Where wetlands exist within the borders of conservancies then this policy will become relevant.

The guiding principle of the policy requires that the conservation and management of the natural resource on communal land be community-based. The process should involve extensive
consultation with and participation of the community with the ultimate objective of self-sustainability of the community-based management system. The development of the conservancy system and the attendant legislative process to support them is a manifestation of the successful implementation of this policy in achieving community based protection of some of the natural resources, namely wildlife or game, on communal land.

The policy also seeks to encourage the rational and integrated planning and management of wetland systems for the preservation of biological diversity, the maintenance of natural life support systems and sustainable resource use. It requires the establishment of a national inventory and quantitative assessment of wetland resources, the identification of the benefits and values of wetlands and the regulated use of their flora and fauna. It further requires that proper environmental assessments be undertaken before and during the execution of developmental projects on wetlands. Where wetlands exist within the borders of conservancies then this policy will become relevant.

**Relevant Legislative Provisions**
- The Constitution of Sierra Leone
- The Land Commission Act
- The Forest Act 2001

**The Land Commission Act**
The Land Commission Act is being formulated by the Ministry of Lands, Country Planning and the Environment and approved by cabinet. The act is to establish a commission with its composition and functions and for other purposes including the management of state lands, the execution of a comprehensive program for the registration of title to land throughout Sierra Leone. The Act will definitely change the status of land tenure and will also have positive implications for the conservation and the protection of biodiversity within the country. With regard to customary land tenure, the Act recognizes and confirms the powers of traditional leaders to allocate and revoke rights in land. The Act further provides for inheritance of customary allocations through the Traditional Authority of a particular area.

**The Forest Act (No. 12 of 2001)**
The Act contains special protection provisions under which the Minister is empowered to declare any area to be protected area for purposes of conservation of soil, flora, and fauna. The legislation stipulates that “no person may cut, burn, uproot or destroy trees that are in protected areas or trees that have been declared as being protected.” It also states that the Chief Conservator /Director of Forest may issue a license or concession to fell and extract a protected tree. Thus, while the various national polices and laws provide an important context for addressing issues relating to the resettlement of people, none gives explicit, clear and unambiguous guidelines that can be adopted for implementation of this project.

**Comparison between Laws of the Republic of Sierra Leone relating to Land Tenure and Administration and the World Bank OP4.12.**

The law relating to Land administration in Sierra Leone is wide and varied. Entitlements for payment of compensation are essentially based on the one hand on the right of ownership as allowed or defined under statutory or customary law. The Government’s land reform policies as
part of the transformation of Sierra Leone as a country and as a society requiring fundamental restructuring of settlement patterns to ensure greater equity and efficiency. It is clear that the rebel war has left acute anomalies to the composition, form and function in settlement patterns. Many of the settlements continue to reflect past tribal settlement patterns and manifest signs of disintegrated land use patterns. The Government is addressing these problems through a broad and comprehensive Land and Tenure Reform Program which can be characterized mainly by the following objectives:
* Increased sustainable land use
* Better access to land administration services
* Reaching land redistribution targets
* Decrease in state owned land
* Increased State land vesting
* Increased security of land tenure.

The Bank’s OP4.12 states that all project affected persons are entitled to some form of compensation whether or not they have legal title, as long as they have controlled or used the land or resources in question on a regular basis before the project-defined cutoff date.

Therefore, for this project, the laws of Sierra Leone would take precedence in as far as it recognizes rights of tenure. In cases where project affected persons have no rights of tenure according to Sierra Leonean law; the provisions of the Bank OP 4.12 would apply in terms of their rights for compensation, consultation, grievance mechanism etc, where they have been affected by this project. Where, there is conflict between laws of Sierra Leone and the Bank OP 4.12, the latter must take precedence if the Bank is to fund the subproject.

1. **Comparison of Sierra Leonean Law and World Bank OP4.12 regarding compensation.**

<td>Cash compensation based upon rates calculated as an average net agricultural income.</td>
<td>As per section G of the RPF once approved by the Bank and disclosed in Sierra Leone and at the Bank infoshop.</td>
</tr>
</tbody>
</table>

Based on the comparison, the below presented entitlement matrix is so designed to assist the process by bridging the gaps between the requirements under Sierra Leone law and the World Bank OP 4.12. The higher of the three standards is followed in this matrix, since this procedure also satisfies the requirements of the lesser two standards. The missing values in the matrix will be determined at the time the resettlement plans are being negotiated and prepared. All land to be managed by the National Youth Commission for the Youth Development Support project if any at all would be soon acquired for the management purposes subject to the Laws of Sierra Leone and the World Bank OP 4.12

</table>
G. METHODS OF VALUING AFFECTED ASSETS.
The Youth Employment Support Project will only operate on communal lands. Therefore, valuation methods for affected land and assets would depend on the type of asset and subject to customary laws. Land assets would be valued according to the following method and compensation paid for. The management committees would compensate for assets and investments, including labor, crops, buildings, and other improvements, according to the provisions of the resettlement plan. Compensation rates would be market rates as of the date and time that the replacement is to be provided. The market prices for cash crops would have to be determined. Calculations for compensation would not be made after the entitlement cut-off date in compliance with this policy. For community land held under customary law, the permanent loss of any such land will be covered by community compensation which will be in-kind, only. However, because the bank policy on resettlement, OP4.12, makes no distinction between statutory and customary rights, not only assets and investments will be compensated for, but also land. Thus, a customary land owner or land user on state owned land will be compensated for land, assets investments, loss of access etc. at market rates at the time of the loss.

Compensation Payments and Related Considerations.
Individual and household compensation will be made in cash, in kind, and/or through assistance. The type of compensation will be an individual choice although every effort will be made to instill the importance and preference of accepting in kind compensation if the loss amounts to more that 20% of the total loss of subsistence assets.

<table>
<thead>
<tr>
<th>3. Forms of compensation</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash Payment</td>
<td>Compensation will be calculated in Sierra Leonean Leones and rates will be adjusted for inflation</td>
</tr>
<tr>
<td>In Kind Compensation</td>
<td>Compensation may include items such as land, houses, other buildings, building materials, seedlings, agricultural inputs and financial credits for equipment</td>
</tr>
</tbody>
</table>
Making compensation payments raises some issues regarding inflation, security and timing that must be considered. One purpose of providing in-kind compensation is to reduce inflationary pressures on the costs of goods and services. Local inflation may still occur, thus market prices will be monitored within the time period that compensation is being made to allow for adjustments in compensation values. The question of security, especially for people who will be receiving cash compensation payments needs to be addressed by the local administration. Local banks and micro finance institutions should work closely with the local administration at this level to encourage the use of their facilities which will positively impact the growth of the local economies. The time and place for in-kind compensation payments will be decided upon by each recipient in consultation with NaCSA and the National Youth Commission. Monetary payments should be paid at a time in relation to the seasonal calendar.

**Compensation for Land**
Compensation for land is aimed at providing a farmer whose land is acquired and used for project purposes with compensation for land labor and crop loss. For this reason, and for transparency, "Land" is defined as an area:
- In cultivation
- Being prepared for cultivation, or
- Cultivated during the last agricultural season

This definition recognizes that the biggest investment a farmer makes in producing a crop is his or her labor. A farmer works on his/her land most of the months of the year. The major input for producing a crop is not seed or fertilizer, but the significant labor put into the land each year by the farmer. As a result, compensation relating to land will cover the market price of labor invested as well as the market price of the crop lost.

**Land measurement**
For purposes of measuring land, the unit of measurement would be that which is used and understood by the affected farmers. Therefore, in rural areas if a traditional unit of measurement exists, that unit should be used. If a traditional unit of measurement does not exist in a particular area then it is recommended that land should be measured in meters or any other internationally accepted unit of measurement. However, in such an event, the unit that is being used must be explained to the affected farmers/users and must somehow be related to easily recognizable land features that the communities are familiar with, such as using location of trees, stumps, etc. as immovable pegs. The most important concern of this exercise is to ensure that the affected person is able to verify using his/her own standards/units of measurement for him/her, the size of land that is being lost. Ensuring that this occurs maintains transparency in the system and will thus avoid subsequent accusations of wrong measurements or is calculation of areas. For instance, a farmer losing a certain piece of land should know exactly how much land he/she is losing, in terms of size and the replacement land must be at least of that same size and comparable quality as land lost, determinable by the farmer.

**Calculation of Crops Compensation Rate**
The current prices for cash crops would have to be determined. All crops to be compensated using a single rate regardless of the crop grown. This rate incorporates the value of crops and the value of the labor invested in preparing a new land. Determining compensation using a single rate creates transparency because anyone can measure the area of land for which compensation is due and multiply that by a single rate known to all. This approach also allows assignment of values to previous year’s land (land in which a farmer has already invested labor) and land that have been planted but have not yet sprouted. Further, it avoids contention over crop density and quality of mixed cropping. The value of the labor invested in preparing agricultural land will be compensated at the average wage in the community for the same period of time. The rate used for land compensation is to be updated to reflect values at the time compensation is paid. The following example, which is based on 2003 data, derives a total value for a one hectare land from the value of the crops on the land and the value of labor invested in preparing a replacement land.

<table>
<thead>
<tr>
<th>Item Compensated</th>
<th>Basis of Value</th>
<th>Sierra Leonean Leone</th>
</tr>
</thead>
<tbody>
<tr>
<td>Value of Crops</td>
<td>Average of the highest 2010 official and market survey land prices per ha of staple food crops (maize, cassava, potatoes, rice, Banana plantains) cash crops</td>
<td></td>
</tr>
<tr>
<td>Labor Invested</td>
<td>Labor costs of preparing a replacement land</td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>Replacement value of crops plus labor</td>
<td></td>
</tr>
</tbody>
</table>

This example assumes a one hectare land

Crop values will be determined based on:

- A combination of staple foods and cash crops. Specifically, the 80/20 ratio of land that a farmer typically has in food crops and cash crops is used to determine the chances he/she would lose food crop rather than a cash crop income.

- The value of staple crops to be taken as the highest market price (over 3 years) reached during the year, in recognition of these factors:

  - Although most farmers grow staple crops mainly for home consumption, they always have the option of selling these crops to take advantage of the market.

  - Farmers most often purchase cereals when they have run out, during the "hungry season" when prices are high. Compensating at a lower value might put the individual or household at risk.

  - Averaging the highest price of stable foods yields a high per ha value that reimburses for the vegetables and other foods that are commonly inter-
cropped with staples, but are almost impossible to measure for compensation.

- The labor cost for preparing replacement land is calculated on what it would cost a farmer to create a replacement land. This value is found by adding together the average costs of clearing, plowing, sowing, weeding twice, and harvesting the crop. Labor costs will be paid in Sierra Leonean currency, at the prevailing market rates.

The following table presents an example of a compensation schedule for a one-hectare land unit. The Namibian dollar values are based on arbitrary labor rates, which will need to be validated at the time payments are made.

<table>
<thead>
<tr>
<th>ACTIVITY</th>

<td></td>
<td></td>
</tr>
</tbody>
</table>

All agricultural labor activities are included for two reasons. First, because of the need for transparency, all land labor will be compensated for at the same rate. Second, it is difficult to forecast when during the growing season a farmer might need to give up his/her land. Thus, the land compensation covers all investments that a farmer will make. In certain cases, assistance may be provided to land users in addition to compensation payments, for example, if the farmer is notified that his/her land is needed after the agriculturally critical date of March (generic date, may be different in Sierra Leone and across climate zones) when s/he will no longer have enough time to prepare another land without help. Assistance will be provided in the form of labor intensive village hire, or perhaps mechanized clearing, so that replacement land will be ready by the sowing dates. The farmer will still continue to receive his/her cash compensation so that she/he can pay for sowing, seeding and harvesting.

**Compensation for Buildings and Structures.**
Compensation will be paid by replacing structures such as huts, houses, farm outbuildings, latrines and fences. Any homes lost will be rebuilt on acquired replacement land, however cash compensation would be available as a preferred option for structures (i.e. extra buildings) lost, that are not the main house or house in which someone is living. The going market prices for construction materials will be determined. Alternatively, compensation will be paid in-kind for the replacement cost without depreciation of the structure. The project will survey these prices for administrative purposes on an ongoing basis.

Compensation will be made for structures that are:
* Abandoned because of relocation or resettlement of an individual or household,
  Or

* Directly damaged by construction activities.

Replacement values will be based on:

* Drawings of individual’s house and all its related structures and support services,

* Average replacement costs of different types of household buildings and structures based on collection of information on the numbers and types of materials used to construct different types of structures (e.g. bricks, rafters, bundles of straw, doors etc.),

* Prices of these items collected in different local markets, Costs for transportation and delivery of these items to acquired/replacement land or building site,

* Estimates of construction of new buildings including labor required.

**Compensation for Sacred Sites**

This policy does not permit the use of land that is defined to be cultural property by the Banks Safeguards OP 4.11. Sacred sites include but not restricted only to altars, initiation centers, ritual sites, tombs and cemeteries. It includes other such sites or places/features that are accepted by local laws (including customary), practice, tradition and culture as sacred. To avoid
any possible conflicts between individuals and/or communities/chiefdoms the use of sacred sites for any project activity is **not** permitted under this project.

**Compensation for vegetable gardens and beehives**
These are planted with vegetable and ingredients for daily use. Until a replacement garden starts to bear, the family displaced (economically or physically) as a result of the project land needs will have to purchase these items in the market. The replacement costs therefore, will be calculated based on the average amount that an average town dweller spends on buying these items for one year per adult from the local market. Beehives are placed in various locations in the bush by some individuals that specialize in honey gathering. If such hives would be disturbed by the project activities, or access to hives is denied, beekeepers can move them, and the bees will adapt to the new locations. Beekeepers would be compensated by the value of one season’s production costs of honey for each hive that is moved and any reasonable costs associated with moving the hive.

**Compensation for Horticultural, Floricultural and Fruit trees**
With Sierra Leone’s highly variable weather patterns, water costs and the fact that much of the land is not suitable for growing fruits, communal areas are sparsely populated with certain types of fruit trees.

Where they exist on affected land the following example, on Mango trees for instance will serve as a guide on how to value fruit trees and other trees of nutritional, medicinal and other significant economic value.

They are primarily important as a source of:

- Subsistence food for families
- Cash produce that contribute to the local and export economy
- Petty market income in some areas, and
- Shade (in the case of mango and some guava trees).
- Traditional medicinal value.

Given their significance to the local subsistence economy, which this project intends to positively impact, fruit trees will be compensated on a combined replacement/market value. Fruit trees used for commercial purposes will be compensated at market value based on historical production records. If households chose to resettle, they will be compensated for the labor invested in the trees they leave behind, because they will continue to own the trees left behind under customary rights. It is not uncommon for individuals to own trees in other villages in which they formally lived and, in some cases, to continue to harvest fruit from those trees for subsistence purposes and/or sale to traders. If a household/individual chooses to transfer ownership of the trees, transfer costs will be paid in addition to labor costs. The compensation rate will be based on information obtained from the socio-economic study. From this study, a
compensation schedule for guava and mango trees can be developed incorporating the following goals:

* Replace subsistence Fruit (e.g. guava/mango) production yields as quickly as possible.

* Provide subsistence farmers with trees to extend the number of months of the year during which the fruit (e.g. guavas/mangoes) are produced and can be harvested as a supplemental source of food for their families during their "hungry season".

* Provide farmers with the opportunity to derive additional production income from trees bearing more valuable fruits at off-season periods.

* Provide cash payments to farmers to replace pre-project income derived from the sale of excess guava or mango production until replacement trees produce the equivalent (or more) in projected cash income.

The compensation schedule is based on providing a combination of new grafted local trees to farmers, as well as cash payments to offset lost yearly income. The schedule could assume the following (the figures in Leones (x no.) to be determined in the socio-economic study):

<table>
<thead>
<tr>
<th>7. Local Fruit Trees e.g. Mangoes, Guava, Oranges</th>

<th>8. Proposed Schedule for Fruit Trees Cut Down</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type /Age of Tree</td>
</tr>
</tbody>
</table>
| Sapling 0-1 Trees planted after project cut-off date in area will not be eligible for compensation | Deliver to Framer:  
- Choice of mango, guava orange trees (Local or grafted)  
- Supplies: fencing to protect trees | Leone |
| Sapling /young Tree First minor production 12-50 fruits occur about age 4-5 | 1—6 | Deliver to farmer:  
- Choice of mango, guava orange trees (Local or grafted)  
- Supplies: fencing to protect trees and water can and rake and spade | Equivalent of X no. of Leones in credit or other financial support for labor invested in planting, fencing and watering made in one payment |
| --- | --- | --- | --- |
| Mango /Orange tree/guava tree production | 6—25 | Deliver to Framer:  
- Choice of mango, guava orange trees (Local or grafted)  
- Supplies: fencing to protect trees and water can and rake and spade | Equivalent of X no. of Leones in credit or other financial support for labor invested in planting, fencing and watering made in one payment.  
Equivalent of X no. of Leones in credit or other financial support representing eight years (8 years x 12 sacks x Leones) lost income/subsistence until replacement trees begin production. This rate to be agreed by farmers |
| Mature Trees–Low or Non-- Fruit producing | 25 -30 | Same as for mature trees above | Same as above |

No compensation will be paid for minor pruning of trees. Compensation for removal of limbs will be prorated on the basis of the number of square metres of surface area removed. The total
surface area of the tree will be calculated using the following formula: \((1/2 \text{ diameter of canopy})^2 \times 3.14\).

**Other domestic fruit and shade trees.**
These trees have recognized local market values, depending upon the species and age. Individual compensation for wild trees "owned" by individuals who are located in lands as defined in this policy will be paid. Note that wild, productive trees belong to the community when they occur in the true bush as opposed to a fallow land. These trees will be compensated for under the umbrella of the village or community compensation.

No compensation will be paid for minor pruning of trees. Compensation for removal of limbs will be prorated on the basis of the number of square meters of surface area removed. The total surface area of the tree will be calculated using the following formula: \((1/2 \text{ diameter of canopy})^2 \times 3.14\).

Compensation (and resettlement) will be funded like any other activity eligible under the projects’ administrative and financial management rules and manuals. Funding would be processed and effected through the Management Committees financial processing arrangements. The compensation process which will involve several steps would be in accordance with the individual management committee's resettlement and compensation plans, significantly;

* Public Participation with the PAPs would initiate the compensation process as part of an ongoing process that would have started at the planning stages when the technical designs are being developed and at the land selection/screening stage. This would ensure that no affected individual/household is simply "notified" one day that they are affected in this way. Instead, this process seeks their involvement and wishes to involve PAPs in a participatory approach with the project, from the beginning as outlined in item k. of this report.

* Notification of land resource holders-in cases where there is clearly no identified owner/user, the respective regional land boards and the traditional leaders having been involved in identifying the land that the management committee’s require will notify the community leaders and representatives who will help to identify and locate the land users. These leaders and representatives will also be charged with the responsibility to notify their members about the established cut-off date and its significance. The user(s) will be informed through both a formal notification in writing and, for as many people as are illiterate, by verbal notification delivered in the presence of the traditional leaders or their representative. In addition, representatives of traditional leaders, religious leaders, other elders and individuals who control pastoral routes, fishing areas, wild trees, or beehives, hunting areas will accompany the survey teams to identify sensitive areas.
* Documentation of Holdings and Assets - the regional land board and traditional leaders and officials of the management committee will arrange meetings with affected individuals to discuss the compensation process. For each individual or household affected, officials of the management committee completes a compensation dossier containing necessary personal information on, the affected party and those that s/he claims as household members, total land holdings, inventory of assets affected, and information for monitoring their future situation. This information is confirmed and witnessed by regional land board, traditional leaders or their representatives. Dossiers will be kept current and will include documentation of lands surrendered. This is necessary because it is one way in which an individual can be monitored over time. All claims and assets will be documented in writing.

* Agreement on Compensation and Preparation of Contracts - All types of compensation are to be clearly explained to the individual and households involved. The respective management committee draws up a contract listing all property and land being surrendered, and the types of compensation (cash and/or in-kind) selected. A person selecting in-kind compensation has an order form which is signed and witnessed. The compensation contract and the grievance redress mechanisms are read aloud in the presence of the affected party and the representative of the regional land board and the traditional leaders prior to signing.

* Compensation Payments - All handing over of property such as land and buildings and compensation payments will be made in the presence of the affected party, the traditional leaders and their officials and representative of the local government administration.

**Community Compensation Payments**
Community compensation will be in-kind only for a community as a whole in the form of reconstruction of the facility to at least the same standard or equivalent better standard required by local planning regulation. Examples of community compensation include;
* School Building (public or religious)
* Public Toilets
* Well or Pump
* Market Place
* Road
* Storage warehouse

Community compensation may in itself require land take and people may be affected, thus a change of impacts which will be compensated for.

**I. A DESCRIPTION OF THE IMPLEMENTATION PROCESS, LINKING RESETTLEMENT IMPLEMENTATION TO CIVIL WORKS.**

Before any project activity is implemented, PAPs will need to be compensated in accordance with the resettlement policy framework. For activities involving land acquisition or loss, denial or restriction to access, it is further required that these measures include provision of Compensation and of other assistance required for relocation, prior to displacement, and preparation and provision of resettlement sites with adequate facilities, where required. In particular, the taking of land and related assets take place only after compensation has been paid.
and, where applicable, resettlement sites and moving allowances have been provided to displaced persons. For project activities requiring relocation or loss of shelter, the policy further requires that measures to assist the displaced persons are implemented in accordance with the individual resettlement plan of action. For project activities that restrict access to or income from the use of natural resources, alternative arrangements to secure equal or greater resources through income schemes, alternative assignment of resources, the domestic planting of medicinal plants if possible, and other schemes should be in place before restrictions are fully enforced.

The measures to ensure compliance with this policy directive would be included in the resettlement plans that would be prepared for each land involving resettlement or compensation. Specifically, precise details must be provided in Section q. Implementation Schedule (see page 13) for each RAP or Section e. Arrangements for Monitoring and Implementation for each ARAP that is prepared by the management committee. In both of these sections the schedule for the implementation of activities agreed to between the management committee and the PAPs must be included, such as target dates for start and completion of civil works, timetables for transfers of completed civil works to PAPs, dates of possession of land that PAPs are using (this date must be after transfer date for completed civil works to PAPs and payments of all compensation), and how these activities are linked to the implementation of the overall sub project.

When the management committee present their resettlement and compensation plans to their regional Land Board and NaCSA for approval, part of the screening process that would use to approve recommended land would be to confirm that the resettlement plans contain acceptable measures that link resettlement activity to civil works in compliance with this policy. The timing mechanism of these measures would ensure that no individual or affected household would be displaced (economically or physically) due to civil works activity before compensation is paid and resettlement sites with adequate facilities are prepared and provided for to the individual or household affected. Once the resettlement plan is approved by the local and national authorities, the resettlement plan should be sent to the World Bank for final review and approval.

J. A DESCRIPTION OF GRIEVANCE REDRESS MECHANISMS.
At the time that the individual resettlement plans are approved and individual compensation contracts are signed, affected individuals and households would have been informed of the process for expressing dissatisfaction and to seek redress. The grievance procedure will be simple, administered as far as possible at the local levels to facilitate access, flexible and open to various proofs taking into cognizance the fact most people are illiterate requiring a speedy, just and fair resolution of their grievances.

The National Youth Commission and NaCSA being a party to the contract would not be the best office to receive, handle and rule on disputes. Therefore, taking these concerns into account, all grievances concerning non-fulfillment of contracts, levels of compensation, or seizure of assets without compensation should be addressed to the Chief/Traditional Leader for resolution. As is normal practice under customary law, all disputes in a chiefdom are solved by the chief after a thorough investigation of the facts using the services of his officials. Chiefs and their agents may need additional training to understand that the losses sustained by PAPs may be additional to
those that are compensable under Sierra Leonean law, but that they can use their own methods of evidence, witnessing, and argument in settling such cases.

If the verdict rendered by the chief is not acceptable to either the individual affected or the management committee, then the parties in their compensation contract would have agreed that the matter would be appealed to an Independent Tribunal, appointed by the Minister of Lands (as required by Communal Land Reform Act) whose decision would be final and binding on the parties. Notwithstanding that the grievance redress mechanism accepts that the compensation and resettlement plans will be (contracts) binding under statute, but it also recognizes that customary law is the law that governs land administration and tenure in the rural/communal areas and is what most Sierra Leoneans living in these areas are used to and understand.

The grievance redress mechanism is designed with the objective of solving disputes at the earliest possible time which will be in the interest of all parties concerned and therefore implicitly discourages referring such matters to the Tribunal for resolution which would otherwise take a considerably longer time.

Also, in the local cultures it takes people time to decide that they are aggrieved and want to complain. Therefore, the grievance procedures will give people up to the end of the next full agricultural season after surrendering their assets to set forth their case.

All attempts would be made to settle grievances. Those seeking redress and wishing to state grievances would do so by notifying their chief. The chief will inform and consult with the management committee, the regional Land Board, NaCSA, household representatives and leaders and other records to determine claims validity. If valid, the chief will notify the Complainant and s/he will be settled. If the complainants claim is rejected, then the matter will be brought before the Tribunal for settlement. The decision of the Tribunal would be final and all such decisions must be reached within a full growing season after the complaint is lodged.

If a complaint pattern emerges, the management committee, the regional Land Board and the NaCSA with the chiefs will discuss possible remediation. The local leaders will be required to give advice concerning the need for revisions to procedures. Once they agree on necessary and appropriate changes, then a written description of the changed process will be made. The management committee, the regional land board and the NaCSA and the chiefs and community representatives and leaders will be responsible for communicating any changes to future potential PAPs when the consultation process with them begins.

The estimate of the overall cost of resettlement and compensation would be determined during the socio-economic study. The National Youth Commission and NaCSA would have to finance the resettlement compensation because they are the parties who would be impacting livelihoods. At this stage, it is not possible to estimate the likely number of people who may be affected since
the technical designs/details have not yet been developed and land needs have not yet been identified. When these locations are known, and after the conclusion of the site specific socio-economic study, information on specific impacts, individual and household incomes and numbers of affected people and other demographic data would be available, thus facilitating the preparation of a detailed and accurate budget for resettlement and compensation. The management committee will prepare the resettlement budget and will finance this budget through the administrative and financial management rules and manuals like any other activity eligible for payment under the project. This budget will be subject to the approval of the World Bank.

At this stage however, all that can be reasonably and meaningfully prepared is an indicative budget, highlighting key features that the budget must contain, inter alia, as follows;

9. Indicative budget

These costs are to be confirmed during the socio-economic study and revised at the time the payments are made.

L. A DESCRIPTION OF MECHANISMS FOR CONSULTATIONS WITH, AND PARTICIPATION OF, DISPLACED (ECONOMICALLY OR PHYSICALLY) PERSONS IN PLANNING, IMPLEMENTATION, AND MONITORING.

Public consultation and participation are essential because they afford potential PAPS
the opportunity to contribute to both the design and implementation of the project activities and reduce the likelihood for conflicts between and among PAPs and the management committees. The way land administration is undertaken in Sierra Leone today based on long standing traditional and cultural practices and land reform programs discussed earlier, makes public consultation with the rural communities, indispensable. Furthermore, as the youth are the intended ultimate beneficiaries of this project, effective and close consultation with them are a pre-requisite for project success. In recognition of this, particular attention would be paid to public consultation with potentially affected individuals/households/communities when resettlement and compensation concerns are involved.

Public consultation will take place at the inception of the planning stages when the potential land areas are being considered. The participation strategy would evolve around the provision of a full opportunity for involvement. Therefore, as a matter of strategy, public consultation would be an on-going activity taking place throughout the entire project cycle. For example, public consultation would also occur during the preparation of the (i) the socio-economic study, (ii) the resettlement and compensation plan and (iv) the environmental impact assessment and (v) during the drafting and reading of the compensation contract.

Public participation and consultation would take place through meetings, radio programs, request for written proposals/comments, filling in of questionnaires/application forms, public readings and explanations of project ideas and requirements, making public documents available at the national, local and community levels at suitable locations like the official residences/offices of local chiefs/elders. These measures would take into account the low literacy levels prevalent in these rural communities by allowing enough time for responses and feedback.

Notwithstanding, the best guarantor for public interest is the chiefs and other local leaders who are responsible members of their local communities and can inadvertently be part of the potentially displaced (economically or physically) individuals/households either in part or in whole.

Monitoring of this process would be through the village chief as part of the individual resettlement and compensation plans and overall the monitoring and evaluation mechanism of the entire project. This requirement is in line with the Bank policy on disclosure.

M. ARRANGEMENTS FOR MONITORING BY THE IMPLEMENTATION AGENCY AND, IF REQUIRED, BY INDEPENDENT MONITORS.

The arrangements for monitoring would fit the overall monitoring plan of the entire Youth Project which would be through the National Environment Protection Agency. The National Commission for Social Action (NaCSA) will institute an administrative reporting system that:

(a) Alerts project authorities to the necessity for land acquisition in a management committee’s business plan and its technical requirements,

(b) Provides timely information about the valuation and negotiation process,
(c) Reports any grievances that require resolution, and

(d) Documents timely completion of project resettlement obligations (i.e. payment of the agreed-upon sums, construction of new structures, etc.) for all permanent and temporary loses, as well as unanticipated, additional construction damage. Consistent with the Environmental and Social Management Framework, the NaCSA and regional land boards would be responsible for periodically transferring the information compiled "on the ground" to the National Youth Commission, so that it is alerted in a timely manner to any difficulties arising at the local level.

The objective will be to make a final evaluation in order to determine:

(i) If affected people have been paid in full and before implementation of the sub project activities;

(ii) If the people who were affected by the project have been affected in such a way that they are now living a higher standard than before, living at the same standard as before, or they are actually poorer than before.

A number of indicators would be used in order to determine the status of affected people (land being used compared to before, standard of house compared to before, level of participation in project activities compared to before, how many kids in school compared to before, health standards, etc). Therefore, the resettlement and compensation plans will set two major socio-economic goals by which to evaluate its success:

* Affected individuals, households, and communities are able to maintain their pre-project standard of living, and even improve on it; and

* The local communities remain supportive of the project.

* The absence or prevalence of conflicts

In order to access whether these goals are met, the resettlement and compensation plans will indicate parameters to be monitored, institute monitoring milestones and provide resources necessary to carry out the monitoring activities. The following parameters and verifiable indicators will be used to measure the resettlement and compensation plans performance:

* Questionnaire data will be entered into a database for comparative analysis at all levels of Government,

* Each individual will have a compensation signed dossier recording his or her initial situation, all subsequent project use of assets/improvements, and compensation agreed upon and received.

* The National Commission for Social Action (NaCSA) and the National Youth Commission (NYC) will maintain a complete database on every individual impacted by the project land use requirements including relocation/resettlement and compensation, land impacts or damages
* Percentage of individuals selecting cash or a combination of cash and in-kind compensation,
* Proposed use of payments
* The number of contention cases out of the total cases
* The number of grievances and time and quality of resolution
* Ability of individuals and families to re-establish their pre-displacement activities, land and crops or other alternative incomes
* Pastoral and Agricultural productivity of new lands
* Wildlife Conservation, eco-tourism activity on acquired land as per plan.
* Number of impacted locals employed by the management committees
* Seasonal or inter annual fluctuation on key foodstuffs
* General relations between the project and the local communities

The following indicators will be used to monitor and evaluate the implementation of resettlement and compensation plans.

<table>
<thead>
<tr>
<th>MONITORING</th>
<th>EVALUATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Outstanding compensation or resettlement contracts not completed before next agricultural season.</td>
<td>Outstanding individual compensation or resettlement contracts</td>
</tr>

<td>Affected individuals and/or households compensated or resettled in first year who have maintained their previous standard of living at final evaluation</td>
</tr>
<tr>
<td>Pre project production versus present production (crop for crop , land for land )</td>
<td>Equal or improved production per affected household</td>
</tr>
<tr>
<td>Pre- project income of vulnerable youth versus present income of vulnerable groups</td>
<td>Higher post project income of vulnerable individuals</td>
</tr>
</tbody>
</table>

Financial records will be maintained by the management committees, the regional Land
Boards and the NaCSA, to permit calculation of the final cost of resettlement and compensation per individual or household. Each individual receiving compensation will have a dossier containing:

* Individual biological information,

* Number of people s/he claims as household dependents

* Amount of land available to the individual or household when the dossier is opened. Additional information will be acquired for individuals eligible for resettlement and/or compensation:

* Level of income and of production

* Inventory of material assets and improvements in land, and

* Debts.

Each time land is used/acquired by a management committee; the dossier will be updated to determine if the individual or household/homestead is being affected to the point of economic non-viability and eligibility for compensation/resettlement or its alternatives. These dossiers will provide the foundation for monitoring and evaluation, as well as documentation of compensation agreed to, received, and signed for. It is normal that some compensation procedures and rates may require revision at some time during the project cycle. The management committees, the regional land boards and NaCSA as the implementing agency, will implement changes through the Change Management Process in the Monitoring and Evaluation manuals of the project (PIM or Project Implementation Manual), which will require feedback from:

* Indicators monitored by the local regional governments to determine whether goals are being met, and

* A grievance procedure for the local community to express dissatisfaction about implementation of compensation and resettlement. This framework is suggesting that the office of the Regional Governments is structured into the whole M&E component of the project. This would take the form of giving the Regional Government the mandate to carry out independent monitoring of the implementation of the resettlement and compensation plans at periodic intervals of quarterly or half yearly (as circumstances dictate) during the project life. Their report would then be sent to the National Youth Commission, Regional Land Boards and the management committees and become part of the official documents of the project.
Annex A: Template for Preparing Resettlement and Compensation Plans (RAPs).
This template is extracted from OP 4.12 Annex A which can also be found on the Banks website at [www.worldbank.org](http://www.worldbank.org). The scope and level of detail of the resettlement plan vary with magnitude and complexity of resettlement. The plan is based on up-to-date and reliable information about (a) the proposed resettlement and its impacts on displaced persons and other adversely affected groups, and (b) the legal issues involved in resettlement. The resettlement plan covers elements, as relevant. When any element is not relevant to project circumstances, it should be noted in the resettlement plan.

**Description of the sub project:** General description of the sub project and identification of sub project area.

**Potential Impacts:** Identification of (a) the sub project component or activities that give rise to resettlement, (b) the zone of impact of such component or activities, (c) the alternatives considered to avoid or minimize resettlement; and (d) the mechanisms established to minimize resettlement, to the extent possible, during project implementation.

**Objectives:** The main objectives of the resettlement program.

**Socio-economic studies:** The findings of socio-economic studies to be conducted in the early stages of project preparation and with the involvement of potentially displaced people, including;

(a) The results of a census survey covering;

(i) Current occupants of the affected area to establish a basis for design of the resettlement program and to exclude subsequent inflows of people from eligibility for compensation and resettlement assistance.

(ii) Standard characteristics of displaced households, including a description of production systems, labor, and household organization; and baseline information on livelihoods (including, as relevant, production levels and income derived from both formal and informal economic activities) and standards of living including health status) of the displaced population.

(iii) The magnitude of the expected loss, total or partial, of assets, and the extent of displacement, physical or economic

(iv) Information on vulnerable groups or persons, for whom special provisions may have to be made; and

(v) Provisions to update information on the displaced people’s livelihoods and standards of living at regular intervals so that the latest information is available at the time of their displacement.

(b) Other studies describing the following;
(i) land tenure and transfer systems, including an inventory of common property natural resources from which people derive their livelihoods and sustenance, non-title-based usufruct systems (including fishing, grazing, or use of forest areas) governed by locally recognized land allocation mechanisms, and any issues raised by different tenure systems in the sub project area.

(ii) The patterns of social interaction in the affected communities, including social support systems, and how they will be affected by the sub project

(iii) Public infrastructure and social services that will be affected; and

(iv) Social and cultural characteristics of displaced communities, including a description of formal and informal institutions (e.g. community organizations, ritual groups, nongovernmental organizations (NGO’s) that may be relevant to the consultation strategy and to designing and implementing the resettlement activities.

**Legal Framework:** A description of any legal circumstances in the subproject that are substantially different and require measures or the application of laws different from those described in this RPF.

**Institutional Framework:** The findings of any analysis of the institutional framework applicable to the subproject covering;

(a) The identification of agencies responsible for resettlement activities and NGOs that may have a role in project implementation, if different from those defined in this RPF;

(b) An assessment of the institutional capacity of the agencies and NGOs to be involved in the subproject; and

(c) Any steps that are proposed to enhance the institutional capacity of agencies and NGOs responsible for resettlement implementation.

**Eligibility:** Definition of displaced persons and criteria for determining their eligibility for compensation and other resettlement assistance, including relevant cut-off dates.

**Valuation of and compensation for losses:** The methodology to be used in valuing losses to determine their replacement cost; and a description of the proposed types and levels of compensation under local law and such supplementary measures as are necessary to achieve replacement cost for lost assets.

**Resettlement Measures:** A description of the packages of compensation and other resettlement measures that will assist each category of eligible displaced persons to achieve the objectives of OP 4.12. In addition to being technically and economically feasible, the resettlement packages should be compatible with the cultural preferences of the displaced persons, and prepared in consultation with them.
**Site selection, site preparation, and relocation:** Alternative relocation sites considered and explanation of those selected, covering,

(a) Institutional and technical arrangements for identifying and preparing relocation sites, whether rural or urban, for which a combination of productive potential, locational advantages, and other factors is at least comparable to the advantages of the old sites, with an estimate of the time needed to acquire and transfer land and ancillary resources,

(b) Any measures necessary to prevent land speculation or influx of eligible persons at the selected sites,

(c) Procedure for physical relocation under the project, including timetables for site preparation and transfer; and

(d) Legal arrangements for regularizing tenure and transferring titles to resettle’s.

**Housing, infrastructure, and social services:** Plans to provide (or to finance resettle’s provision of) housing, infrastructure (e.g. water supply, feeder roads), and social services to host populations; any necessary site development, engineering, and architectural designs for these facilities.

**Environmental protection and management** A description of the boundaries of the relocation area; and an assessment of the environmental impacts of the proposed resettlement and measures to mitigate and manage these impacts (coordinated as appropriate with the environmental assessment of the main investment requiring the resettlement).

**Community Participation:** a description of the strategy for consultation with and participation of resettle’s and host communities, including:

(a) A description of the strategy for consultation with and participation of resettle’s and hosts in the design and implementation of resettlement activities,

(b) A summary of the views expressed a how these views were taken into account in preparing the resettlement plan,

(c) A review of the resettlement alternatives presented and the choices made by displaced persons regarding options available to them, including choices related to forms of compensation and resettlement assistance, to relocating as individual families or as parts of pre-existing communities or kinship groups, to sustaining existing patterns of group organization, and to retaining access to cultural property (e.g. places of worship, pilgrimage centers, cemeteries); and

(d) Institutionalized arrangements by arrangements by which displaced people can communicate their concerns to project authorities throughout planning and implementation, and measures to ensure that such vulnerable groups as indigenous people, ethnic minorities, landless, and women are adequately represented.
**Integration with host populations:** Measures to mitigate the impact of resettlement on any host communities, including:

(a) Consultations with host communities and local governments,

(b) Arrangements for prompt tendering of any payment due the hosts for land or other assets provided to resettle’s,

(c) Arrangements for addressing any conflict that may arise between resettles and host communities, and

(d) Any measures necessary to augment services (e.g. education, water, health, and production services) in host communities to make them at least comparable to services available to resettles.

**Grievance procedures:** Affordable and accessible procedures for third-party settlement of disputes arising from resettlement, such grievance mechanisms should take into account the availability of judicial recourse and community and traditional dispute settlement mechanisms.

**Organizational responsibilities:** The organizational framework for implementing resettlement, including identification of agencies responsible for delivery or resettlement measures and provision of services; arrangements to ensure appropriate coordination between agencies and jurisdictions involved in implementation; and any measures (including technical assistance) needed to strengthen the implementing agencies capacity to design and carry out resettlement activities; provisions for the transfer to local authorities or resettles themselves of responsibility for managing facilities and services provided under the project and for transferring other such responsibilities from the resettlement implementing agencies, when appropriate.

**Implementation Schedule:** An implementation schedule covering all resettlement activities from preparation through implementation, including target dates for the achievement of expected benefits to resettles and hosts and terminating the various forms of assistance. The schedule should indicate how the resettlement activities are linked to the implementation of the overall project.

**Costs and budget:** Tables showing itemized cost estimates for all resettlement activities, including allowances for inflation, population growth, and other contingencies; timetable for expenditures; sources of funds; and arrangements for timely flow of funds, and funding for resettlement, if any, in areas outside the jurisdiction of the implementing agencies.

**Monitoring and evaluation:** Arrangements for monitoring of resettlement activities by the implementing agency, supplemented by independent monitors as considered appropriate by the Bank, to ensure complete and objective information; performance monitoring indicators to measure inputs, outputs, and outcomes for resettlement activities; involvement of the displaced persons in the monitoring process; evaluation of the impact of resettlement for a reasonable period after all resettlement and related development activities have been completed; using the results of resettlement monitoring to guide subsequent implementation.
