FINAL ENVIRONMENTAL AND SOCIAL REVIEW CHECKLIST

Micro-project title: Extension of the Potable Water Distribution network in Akhatyan Community

Micro-project #: TSQ-04

Is the Environmental and Social management plan (ESMP) developed?

Yes + No _____

Does ESMP provide a full list of potential impacts and establish adequate measures for their mitigation?

Yes + No _____

Conclusion of the Final Environmental and Social Assessment

### PART A: GENERAL PROJECT AND SITE INFORMATION

#### INSTITUTIONAL & ADMINISTRATIVE

<table>
<thead>
<tr>
<th>Micro-project number and title</th>
<th>TSQ-04 Extension of the Potable Water Distribution network in Akhlatyan Community</th>
</tr>
</thead>
<tbody>
<tr>
<td>Municipality, community</td>
<td>Syuniq, marz, Akhlatyan community</td>
</tr>
<tr>
<td>Scope of site-specific activity</td>
<td>Water supply of the village is provided from 3 group sources: 1. two sources named &quot;Manchu Chuman&quot;; the catchments are in satisfactory condition, there is a sanitary zone there. The whole length of the water pipe is 3.5km with dy=100mm steel tubes. They were constructed in the 80s. The catchments were renovated in 2007-2008. 1.76km part of was reconstructed with polyethylene. The system is in satisfactory condition. 2. Right wing water sources named &quot;Obi Dzor&quot;. 5 small catchments were constructed, the water of which flow into the catchment tank and is delivered to the DRR with dy=65mm steel tubes. The system was constructed in the middle of 70-ies. It is in an unsatisfactory condition. 3. The group of sources named &quot;Dzor of Gyol&quot;. A water pipe with 1.5km length dy=80mm steel tubes was constructed (up to the DRR). The system was constructed in 1998 by &quot;Save the Children&quot; organization. The water pipe is in satisfactory condition. The catchments are absolutely damaged. They sank into the sludge because of swamping of the area. The distributing network of the village was constructed in the 60s (with dy=80mm steel tubes). The 1.2km long section was replaced in 2002. Partial renovation was implemented. The distribution network is in satisfactory condition. There is a concrete monolithic DRR in the village. There is a sanitary zone there. Micro-project will provide 2.5km long piping to connect right wing and left wing 6 sources named &quot;Obi Dzor&quot;. This pipe will be connected to the existing water pipe of &quot;Dzor of Gyol&quot; (which is in satisfactory condition). This technical solution allows to make up for the lost catchments of the area restoration of which is deemed impossible. The new pipe will change the situation in the village for water users and ensure smooth operation of the system.</td>

#### SITE DESCRIPTION

<table>
<thead>
<tr>
<th>Name of institution whose premises are to be rehabilitated</th>
<th>Water Department of Syuniq marzpetaran (regional governor office), Akhlatyan potable water pipeline non-profit organization</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address and site location</td>
<td>Address: Syuniq marz, Akhlatyan village.</td>
</tr>
<tr>
<td>Who owns the land?</td>
<td>Land plots proposed for the extension of the village Akhlatyan water supply network according to the legal decision of land allocation N5-A, 01.26.2017. The allocated land is 7065 sq. meter. (Annex 3)</td>
</tr>
<tr>
<td>Description of physical and natural environment around the site (see maps and photo annex 1)</td>
<td>The provided land plot is not under formal or informal private use; there are no structures, crops, trees or business in the provided land. The surrounding area next to the route of the pipelines does not include private lands or traffic roads, thus restricted access to roads and private property and disruption of local traffic is not anticipated. There are no subterranean networks across the route of the pipelines. During the construction works, no tree removal is intended. Endemic species and plants do not exist across the land plot provided for the construction works. Geological conditions are favorable for construction works. Physical-geological phenomena do not exist in the area. The ground waters are located deeper than the pipelines are proposed to be constructed. The precipitations in the area generally have surface flood, and only the part of the water penetrate through the minerals and soil.</td>
</tr>
</tbody>
</table>
### LEGISLATION

<table>
<thead>
<tr>
<th>National &amp; local legislation &amp; permits that apply to project activity</th>
<th>Extension of the Potable Water Distribution network in Akhlatyan is not subject to the Environmental Impact Assessment and to the issuance of the expert environmental review conclusion.</th>
</tr>
</thead>
</table>

According to the Armenian legislation, the following permissions are required for this micro-project:

(a) Special permission of water use (is available)
(b) Land allocation for captations sanitary areas and pipeline construction (is available)
(c) Permission for construction

### PUBLIC CONSULTATION

¹ Land acquisitions includes displacement of people, change of livelihood encroachment on private property this is to land that is purchased/transferred and affects people who are living and/or squatters and/or operate a business (kiosks) on land that is being acquired.

² Toxic / hazardous material includes but is not limited to asbestos, toxic paints, noxious solvents, removal of lead paint, etc.
**PART C: MITIGATION MEASURES**

<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES (provide costs where applicable)</th>
</tr>
</thead>
</table>
| 0. General Conditions | Notification and Worker Safety | (a) The local construction and environment inspectorates and communities have been notified of upcoming activities.  
(b) The public has been notified of the works through appropriate notification in the media and/or at publicly accessible sites (including the site of the works).  
(c) All legally required permits have been acquired for construction.  
(d) The Contractor formally agrees that all work will be carried out in a safe and disciplined manner designed to minimize impacts on neighboring residents and environment.  
(e) Workers’ PPE will comply with international good practice (always hardhats, as needed masks and safety glasses, harnesses and safety boots).  
(f) Appropriate signposting of the sites will inform workers of key rules and regulations to follow. |
| A. General Construction Activities | Air Quality | (a) During interior demolition debris-chutes shall be used above the first floor.  
(b) Demolition debris shall be kept in controlled area and sprayed with water mist to reduce debris dust.  
(c) During pneumatic drilling/wall destruction dust shall be suppressed by ongoing water spraying and/or installing dust screen enclosures at site.  
(d) The surrounding environment (sidewalks, roads) shall be kept free of debris to minimize dust.  
(e) There will be no open burning of construction / waste material at the site.  
(f) There will be no excessive idling of construction vehicles at sites. |
| Noise | (a) Construction noise will be limited to restricted times agreed to in the permit.  
(b) During operations the engine covers of generators, air compressors and other powered mechanical equipment shall be closed, and equipment placed as far away from residential areas as possible. |
| Water Quality | (a) The site will establish appropriate erosion and sediment control measures such as e.g. hay bales and/or silt fences to prevent sediment from moving off site and causing excessive turbidity in nearby streams and rivers. |
| Waste Management | (a) Waste collection and disposal pathways and sites will be identified for all major waste types expected from demolition and construction activities.  
(b) Mineral construction and demolition wastes will be separated from general refuse, organic, liquid and chemical wastes by on-site sorting and stored in appropriate containers.  
(c) Construction waste will be collected and disposed properly by licensed collectors.  
(d) The records of waste disposal will be maintained as proof for proper management as designed.  
(e) Whenever feasible the contractor will reuse and recycle appropriate and viable materials (except asbestos). |
| B. Individual wastewater treatment system | Water Quality | (a) The approach to handling sanitary wastes and wastewater from building sites must be approved by the local authorities.  
(b) Before being discharged into receiving waters, effluents from individual wastewater systems must be treated in order to meet the minimal quality criteria set out by national guidelines on effluent quality and wastewater treatment.  
(c) Monitoring of new wastewater systems (before/after) will be carried out.  
(d) Construction vehicles and machinery will be washed only in designated areas where runoff will not pollute natural surface water bodies. |
| C. Historic building(s) | Cultural Heritage | (a) If the building is a designated historic structure, very close to such a structure, or located in a designated historic district, notification shall be made and approvals/permits be obtained from local authorities and all construction activities planned and carried out in line with local and national legislation.  
(b) It shall be ensured that provisions are put in place so that artifacts or other possible “chance finds” encountered in excavation or construction are noted and registered, responsible officials contacted, and works activities delayed or modified to account for such finds. |
<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES CHECKLIST</th>
</tr>
</thead>
</table>
| D.        | Acquisition of land | Land Acquisition Plan/Framework  
(a) If expropriation of land was not expected but is required, or if loss of access to income of legal or illegal users of land was not expected but may occur, that the Bank’s Task Team Leader shall be immediately consulted.  
(b) The approved Land Acquisition Plan/Framework (if required by the project) will be implemented. |
| E.        | Toxic Materials | Asbestos management  
(a) If asbestos is located on the project site, it shall be marked clearly as hazardous material  
(b) When possible the asbestos will be appropriately contained and sealed to minimize exposure  
(c) The asbestos prior to removal (if removal is necessary) will be treated with a wetting agent to minimize asbestos dust  
(d) Asbestos will be handled and disposed by skilled & experienced professionals  
(e) If asbestos material is stored temporarily, the wastes should be securely enclosed inside closed containments and marked appropriately. Security measures will be taken against unauthorized removal from the site.  
(f) The removed asbestos will not be reused. |
| F.        | Affected forests, wetlands and/or protected areas | Protection  
(a) All recognized natural habitats, wetlands and protected areas in the immediate vicinity of the activity will not be damaged or exploited, all staff will be strictly prohibited from hunting, foraging, logging or other damaging activities.  
(b) A survey and an inventory shall be made of large trees in the vicinity of the construction activity, large trees shall be marked and cordoned off with fencing, their root system protected, and any damage to the trees avoided.  
(c) Adjacent wetlands and streams shall be protected from construction site run-off with appropriate erosion and sediment control feature to include by not limited to hay bales and silt fences.  
(d) There will be no unlicensed borrow pits, quarries or waste dumps in adjacent areas, especially not in protected areas. |
| G.        | Disposal of medical waste | Infrastructure for medical waste management  
(a) In compliance with national regulations the contractor will insure that newly constructed and/or rehabilitated health care facilities include sufficient infrastructure for medical waste handling and disposal; this includes and not limited to:  
   - Special facilities for segregated healthcare waste (including soiled instruments “sharps”, and human tissue or fluids) from other waste disposal; and  
   - Appropriate storage facilities for medical waste are in place; and  
   - If the activity includes facility-based treatment, appropriate disposal options are in place and operational. |
| H.        | Traffic and Pedestrian Safety | Direct or indirect hazards to public traffic and pedestrians by construction activities  
(a) In compliance with national regulations the contractor will insure that the construction site is properly secured and construction related traffic regulated. This includes but is not limited to  
   - Signposting, warning signs, barriers and traffic diversions: site will be clearly visible and the public warned of all potential hazards  
   - Traffic management system and staff training, especially for site access and near-site heavy traffic. Provision of safe passages and crossings for pedestrians where construction traffic interferes.  
   - Adjustment of working hours to local traffic patterns, e.g. avoiding major transport activities during rush hours or times of livestock movement  
   - Active traffic management by trained and visible staff at the site, if required for safe and convenient passage for the public.  
   - Ensuring safe and continuous access to office facilities, shops and residences during renovation activities, if the buildings stay open for the public. |
## Environmental Monitoring Plan for construction and operation phases.

Attachment 1: Photos of sub-project site
Annex 2: Copy of an agreement for construction waste disposal

Non-official translation of the above attached document:

This is to inform you, that within the framework of construction of potable water supply system in Akhlatyan Community:

1. Excess material (soil), if any, will be taken from the area 2 km far from the construction site, the area name is "Gyuner" land plot.
2. The generated construction waste will be transported to the waste dump located 2 km away from the site, the site name is Akhlatyan land plot.
3. The temporary dump of the soil is not determined.

Head of Community (signed) A.Babayan
Annex 3: Copy of the land allocation document

Non-official translation of the above attached document:

Community Council of Akhlatyan Community RA

Decree

January 26, 2017 N-5-A

On land allocation of the purpose of sanitation zone construction by Armenian Territorial development fund

According to the 13th point of 10st part of law on Local Self-Government and 18st point of 21st part Land Code of the Republic of Armenia, and support by the Head of the Community the Community Council of Akhlatyan Community

Made a decision

Allocate 7065 qm. land plot in the area named “Obi dzor” which is Community property to carry out the construction of sanitation zone in Akhlatyan Community within the framework of Social Investment and Local Development Project implemented by Armenian Territorial Development Fund.

Vote for 5, Against - 0, abstain from voting - 0

Head of Community A. Babayan
Give on 01.27.2017
Is in force until 01.27.2022
A stakeholder consultation meeting on the draft Environmental and Social Management Plan (ESMP) for the Micro-project of the Extension of the Potable Water Distribution network in Akhlatyan Community was held at Akhlatyan Community Administration Office, Syuniq Marz on 24 February, 2017.

The announcement for the meeting in Armenian and English languages, including its date and time, was disclosed on the ATDF web page (www.atdf.am) on 14 Feb, 2017. Information on the meeting day and time was posted on information boards of Akhlatyan Community Administration Office; in addition, the Administration conducted telephone calls to ensure participants’ attendance.

The public consultation was carried out by ATDF Environmental specialist Asya Osipova. 19 participants were present at the meeting, among which 6 women (about 33%).

A. Osipova introduced the main purpose of the consultation, the key features of the Micro-project and briefly introduced World Bank requirements and Armenian legislation on conducting environmental and social assessment and reasoned the need to develop ESMP for Potable Water Distribution network projects as in case of Akhlatyan Micro-project.

A. Osipova described baseline environmental conditions and outlined likely negative environmental impacts related to the Micro-project implementation. She specified that no tree removal is intended, the site does not involve endemic species and plants, as well as subterranean networks. Physical-geological conditions are favorable for construction. The key environmental adverse impacts include pollution of air, generation of construction waste, disruption of natural landscape. She specified key environmental measures aimed at reduction of negative impacts and emphasized that natural relief and landscape will be recovered after construction works. As the surrounding area next to the route of the pipelines do not include private lands or traffic roads direct or indirect hazards to public traffic and pedestrians by construction activities are not anticipated. A. Osipova explained what measures ATDF will apply to enhance effectiveness of construction waste management. She highlighted that safety measures for community members and workers will be applied.

A. Osipova outlined that technical supervisors on monthly basis will keep under control the fulfillment of all the environmental mitigation measures included in ESMP, and report the deviations to ATDF.

A. Osipova presented the main provisions of the ESMF concerning to the social aspects of the Project. She emphasized that the project does not involve any resettlement as proposed area of the construction is public property and land allocation document is available.
Ms. Osipova explained mechanisms of public engagement and grievance redress mechanism (GRM) to be applied during project implementation. Elected grievance focal point at the community level Hayrunjan Ashot was introduced to the community members. A. Osipova explained the purpose of Focal points at local level and welcomed participants to apply to Ashot in case of questions/feedback or grievances concerning to the project implementation. A. Osipova talked also about main socio-economic challenges including engagement of women, youth and vulnerable groups in distribution of benefits. She outlined that these groups should have equal opportunities to be engaged in project benefits.

A. Osipova informed the beneficiaries that they also have the option to contact ATDF directly to communicate their grievance if they are unable to, or do not wish to, go through the PIC grievance focal point. A. Osipova explained all the channels of grievance submission involving e-mail address, hot line telephone number, postal address and web-site link and outlined that ATDF contact information is reflected on the booklets delivered to the participants, as well as on the information desk to be posted in public visible places in the Community, including Community Administrative Office building. A. Osipova introduced that information on Micro-project details permanently will be available on the information desks, as well as on-going announcements and references. She outlined that these will support to raising public awareness and early identification, assessment and resolution of complaints on Project activities.

The participants were welcomed to raise questions regarding to the discussed questions. Following questions were raised by the participants:

**Arsen Pogosyan:** We would like to welcome the Project and outline that this project is very important for the Community as it will enable us to have regular and clean potable water at our houses. Besides, I would like to outline that the Community also has issue regarding to irrigation water supply system which is very unfavorable in terms of agricultural development.

**Armenak Setrakyan:** The other issues of the Community involve bad conditions of inter-community roads.

**Hovakimyan Seda:** In many cases people are not sure where to apply having grievances. I am very happy to hear that ATDF cares about the Communities. The established grievance mechanism is very important as it will enable to quickly raise the voice of community members.

**Mesrop Meliksetyan:** We welcome the idea that you encourage involvement of community members at work activities. It will be very important for community members to have opportunity to be employed at project-related jobs as many households in our community depend on agricultural works which in many cases are not profitable.

There were raised technical questions on the next procedures of the Micro-project and start date which were answered by the Specialists.

The list of participants and photos are attached.
