FINAL ENVIRONMENTAL AND SOCIAL REVIEW CHECKLIST

Micro-project title: Construction of the External System of Drinking Water in Artsvanist

Micro-project #: TGQ-11

Is the Environmental and Social management plan (ESMP) developed?

Yes + No _____

Does ESMP provide a full list of potential impacts and establish adequate measures for their mitigation?

Yes + No _____

Conclusion of the Final Environmental and Social Assessment

</tr>
<tr>
<td>Scope of site-specific activity</td>
<td>Water supply of the village was implemented by two water pipelines. Water sources named &quot;Alaqbalaq&quot; were put into pipes and the water (9.0km length) with asbestos cement dy=150mm tubes were given to the old DRR of the village in 1952. In these sources water outlets were decreased with time, in the result of which, a metal tank for water supply was inserted in the head - in the stream channel which was connected to the water pipe. The water pipe is damaged and it is useless for the further operation. The second water pipe (with dy=100m steel tubes) which is 7.7km far from the water source named &quot;Canyon of Satan&quot; was constructed in 2004 by the ASIF project. The old DRR-s of the village was located in the area of tombs. The new DRR (500cubic meters) was constructed by the second project of ASIF with a sanitary zone. The distribution network was reconstructed with 1.6km length. The distribution network of the village has about 7.5km length and was constructed with dy=100mm steel and polyethylene tubes. It is in sufficient condition. Taking into account the extremely decreasing of the water outlet of the source named &quot;Alaqbalaq&quot; and the fact that it is not expedient to restore, the twin sources located about 7.8km to South from the DRR were suggested to put into pipes in order to supply the community with water.</td>

### SITE DESCRIPTION

<table>
<thead>
<tr>
<th>Name of institution whose premises are to be rehabilitated</th>
<th>Water Department of Gegharqunik Marzpetaran (regional governor office), Arcvanist drinking Water Pipeline NPO</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address and site location</td>
<td>Address: Gegharqunik Marz, Arcvanist Community.</td>
</tr>
<tr>
<td>Who owns the land?</td>
<td>The proposed land plots for construction of sanitary zones of the source located about 7.8km to South from the DRR is property of Arcvanist community. The land allocation document (N51, 15.12.2016) is available according to which 4536 meter/square land plot in the area called “Twin Sources” (code 63-72) was allocated for construction activities of the external system of drinking water. The whole route of the pipelines (7.8km) is passing through the lands which are property of the Community.</td>
</tr>
<tr>
<td>Description of physical and natural environment around the site (see maps and photo annex 1)</td>
<td>The proposed are not used by any private household; there are no structures, crops, trees or business in the proposed site. The entire route of the pipeline will pass through the communal lands. The starting part of the pipeline will pass through the hills where there are no adjacent agricultural lands. The rest part of the pipeline will pass though the communal trail which is situated nearby to the agricultural lands (not crossing them). In one part the pipeline will cross the communal road which currently is used by the residents to reach their agricultural lands. As there are several alternative roads for the trail and communal road which will be affected restricted access to the agricultural lands and private property and disruption of local traffic is not anticipated. There are no subterranean networks across the route of the pipelines. During the construction works no tree removal is intended. Endemic species and</td>
</tr>
</tbody>
</table>
plants do not. The Geological Engineering conditions are sufficient for construction works. In terms of seismic zones the area is classified in 3th zone. Seismic stability is 9 point. Physical-geological phenomena do not exist in the area. The ground waters are located deeper than the pipelines are proposed to be constructed. The precipitations in the area generally have surface flood, and only the part of the water penetrate through the minerals and soil. The natural relief and landscape will be recovered after construction works.

**LEGISLATION**

| National & local legislation & permits that apply to project activity | Construction of a new drinking water pipeline is not subject to the Environmental Impact Assessment and to the issuance of the expert environmental review conclusion. According to the Armenian legislation, the following permissions are required for this micro-project:  
(a) Water use permit  
(b) Land allocation for captations, sanitary areas and pipeline construction  
(c) Construction permit (to be provided)  
(d) Waste disposal permit |

**PUBLIC CONSULTATION**

| When / where the public consultation process will take /took place | Public consultation was carried out in the Arcvanist Community on 15 March, 2017. |

**ATTACHMENTS**

---

1. Land acquisitions includes displacement of people, change of livelihood encroachment on private property this is to land that is purchased/transferred and affects people who are living and/or squatters and/or operate a business (kiosks) on land that is being acquired.

2. Toxic / hazardous material includes but is not limited to asbestos, toxic paints, noxious solvents, removal of lead paint, etc.
# PART C: MITIGATION MEASURES

<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES (provide costs where applicable)</th>
</tr>
</thead>
</table>
| **0. General Conditions** | Notification and Worker Safety | (a) The local construction and environment inspectorates and communities have been notified of upcoming activities  
(b) The public has been notified of the works through appropriate notification in the media and/or at publicly accessible sites (including the site of the works)  
(c) All legally required permits have been acquired for construction  
(d) The Contractor formally agrees that all work will be carried out in a safe and disciplined manner designed to minimize impacts on neighboring residents and environment.  
(e) Workers’ PPE will comply with international good practice (always hardhats, as needed masks and safety glasses, harnesses and safety boots)  
(f) Appropriate signposting of the sites will inform workers of key rules and regulations to follow. |
| **A. General Construction Activities** | Air Quality | (a) During interior demolition debris-chutes shall be used above the first floor  
(b) Demolition debris shall be kept in controlled area and sprayed with water mist to reduce debris dust  
(c) During pneumatic drilling/wall destruction dust shall be suppressed by ongoing water spraying and/or installing dust screen enclosures at site  
(d) The surrounding environment (sidewalks, roads) shall be kept free of debris to minimize dust  
(e) There will be no open burning of construction / waste material at the site  
(f) There will be no excessive idling of construction vehicles at sites |
| | Noise | (a) Construction noise will be limited to restricted times agreed to in the permit  
(b) During operations the engine covers of generators, air compressors and other powered mechanical equipment shall be closed, and equipment placed as far away from residential areas as possible |
| | Water Quality | (a) The site will establish appropriate erosion and sediment control measures such as e.g. hay bales and/or silt fences to prevent sediment from moving off site and causing excessive turbidity in nearby streams and rivers. |
| | Waste Management | (a) Waste collection and disposal pathways and sites will be identified for all major waste types expected from demolition and construction activities.  
(b) Mineral construction and demolition wastes will be separated from general refuse, organic, liquid and chemical wastes by on-site sorting and stored in appropriate containers.  
(c) Construction waste will be collected and disposed properly by licensed collectors  
(d) The records of waste disposal will be maintained as proof for proper management as designed.  
(e) Whenever feasible the contractor will reuse and recycle appropriate and viable materials (except asbestos) |
| **B. Individual wastewater treatment system** | Water Quality | (a) The approach to handling sanitary wastes and wastewater from building sites must be approved by the local authorities  
(b) Before being discharged into receiving waters, effluents from individual wastewater systems must be treated in order to meet the minimal quality criteria set out by national guidelines on effluent quality and wastewater treatment  
(c) Monitoring of new wastewater systems (before/after) will be carried out  
(d) Construction vehicles and machinery will be washed only in designated areas where runoff will not pollute natural surface water bodies. |
| **C. Historic building(s)** | Cultural Heritage | (a) If the building is a designated historic structure, very close to such a structure, or located in a designated historic district, notification shall be made and approvals/permits be obtained from local authorities and all construction activities planned and carried out in line with local and national legislation.  
(b) It shall be ensured that provisions are put in place so that artifacts or other possible “chance finds” encountered in excavation or construction are noted and registered, responsible officials contacted, and works activities delayed or modified to account for such finds. |

<tr>
<td><strong>D. Acquisition of land</strong></td>
<td>Land Acquisition Plan/Framework</td>
<td>(a) If expropriation of land was not expected but is required, or if loss of access to income of legal or illegal users of land was not expected but may occur, that the Bank’s Task Team Leader shall be immediately consulted.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(b) The approved Land Acquisition Plan/Framework (if required by the project) will be implemented</td>
</tr>
</tbody>
</table>
| **E. Toxic Materials**    | Asbestos management                            | (a) If asbestos is located on the project site, it shall be marked clearly as hazardous material  
(b) When possible the asbestos will be appropriately contained and sealed to minimize exposure  
(c) The asbestos prior to removal (if removal is necessary) will be treated with a wetting agent to minimize asbestos dust  
(d) Asbestos will be handled and disposed by skilled & experienced professionals  
(e) If asbestos material is be stored temporarily, the wastes should be securely enclosed inside closed containments and marked appropriately. Security measures will be taken against unauthorized removal from the site.  
(f) The removed asbestos will not be reused |
|                          | Toxic / hazardous waste management              | (a) Temporarily storage on site of all hazardous or toxic substances will be in safe containers labeled with details of composition, properties and handling information  
(b) The containers of hazardous substances shall be placed in an leak-proof container to prevent spillage and leaching  
(c) The wastes shall be transported by specially licensed carriers and disposed in a licensed facility.  
(d) Paints with toxic ingredients or solvents or lead-based paints will not be used |
| **F. Affected forests, wetlands and/or protected areas** | Protection                                    | (a) All recognized natural habitats, wetlands and protected areas in the immediate vicinity of the activity will not be damaged or exploited, all staff will be strictly prohibited from hunting, foraging, logging or other damaging activities.  
(b) A survey and an inventory shall be made of large trees in the vicinity of the construction activity, large trees shall be marked and cordoned off with fencing, their root system protected, and any damage to the trees avoided  
(c) Adjacent wetlands and streams shall be protected from construction site runoff with appropriate erosion and sediment control feature to include by not limited to hay bales and silt fences  
(d) There will be no unlicensed borrow pits, quarries or waste dumps in adjacent areas, especially not in protected areas. |
| **G. Disposal of medical waste** | Infrastructure for medical waste management     | (a) In compliance with national regulations the contractor will insure that newly constructed and/or rehabilitated health care facilities include sufficient infrastructure for medical waste handling and disposal; this includes and not limited to:  
▪ Special facilities for segregated healthcare waste (including soiled instruments “sharps”, and human tissue or fluids) from other waste disposal; and  
▪ Appropriate storage facilities for medical waste are in place; and  
▪ If the activity includes facility-based treatment, appropriate disposal options are in place and operational |
| **H Traffic and Pedestrian Safety** | Direct or indirect hazards to public traffic and pedestrians by construction activities | (a) In compliance with national regulations the contractor will insure that the construction site is properly secured and construction related traffic regulated. This includes but is not limited to  
▪ Signposting, warning signs, barriers and traffic diversions: site will be clearly visible and the public warned of all potential hazards  
▪ Traffic management system and staff training, especially for site access and near-site heavy traffic. Provision of safe passages and crossings for pedestrians where construction traffic interferes.  
▪ Adjustment of working hours to local traffic patterns, e.g. avoiding major transport activities during rush hours or times of livestock movement  
▪ Active traffic management by trained and visible staff at the site, if required for safe and convenient passage for the public. |
• Ensuring safe and continuous access to office facilities, shops and residences during renovation activities, if the buildings stay open for the public.

Reference

To the N14 Minutes of Community Council’s N51 decision 15.12.2016

1. Reporter S. Ohanyan introduced land allocation need for “Construction of the External System of Drinking Water in Artsvanist” Project

H. Yeremyan and D. Gevorgyan introduced their views.

According to the provisions of 27<sup>th</sup> point of 16<sup>th</sup> article of RA Law on “Local Self-Governance” the Community Council decides:

Allocate 4536 meter/square land from the land plot-code 63-72 located in the area called “Twin Sources” for construction activities, as the water supply system issue is urgent and Community applied to ATDF for construction of the external system of drinking water.

Voting results: For-7, against-0, abstain-0

Head of Community  S. Ohanyan (signed and sealed)

Correspondents to the original document  S. Nikoghosyan

Annex 3: Copy of an agreement for construction waste disposal
Non-official translation of the above attached document:

Reference

This is to inform you, that within the framework of Construction of the External System of Drinking Water in Artsvanist

1. The material (soil) that are not available for refilling, depending on necessity, will be taken from the area 5 km far from the construction site.

2. The generated construction waste will be transported to the waste dump located 6 km far from the site.

Head of Community (signed) S. Ohanyan
Annex 4: Water use permit

UPON CHEMICAL and BACTERIOLOGICAL ANALYSIS OF DRINKING WATER SAMPLE

Indicators of bacteriological survey of water are compliant with norms, including requirements of Н 2-III-A2-i
A stakeholder consultation meeting on the draft Environmental and Social Management Plan (ESMP) for the Micro-project of the Construction of the External System of Drinking water in Artsvanist was held at Artsvanist Community Administration Office, Gegarqunik Marz on 15 March, 2017. The announcement for the meeting in Armenian and English languages, including its date and time, was disclosed on the ATDF web page (www.atdf.am) on 9 March, 2017. Information on the meeting day and time was posted on information boards of Artsvanist Community Administration Office; in addition the Administration conducted telephone calls to ensure participants’ attendance.

The public consultation was carried out by ATDF Environmental Specialist Asya Osipova. 25 participants were present at the meeting.

A. Osipova introduced World Bank requirements and Armenian legislation on conducting environmental and social assessment and reasoned the need to develop ESMP for Construction of the External System of Drinking water in Artsvanist. A. Osipova described baseline environmental conditions and outlined likely negative environmental impacts related to the Micro-project implementation. She specified that no tree removal is intended, the site does not involve endemic species and plants, as well as subterranean networks. Physical-geological conditions are favorable for construction. The key environmental adverse impacts include pollution of air, generation of construction waste, disruption of natural landscape. She specified key environmental measures aimed at reduction of negative impacts and emphasized that natural relief and landscape will be recovered after construction works. As the surrounding area next to the route of the pipelines do not include private lands or traffic roads direct or indirect hazards to public traffic and pedestrians by construction activities are not anticipated. A. Osipova explained what measures ATDF will apply to enhance effectiveness of construction waste management. She highlighted that safety measures for community members and workers will be applied.

A. Osipova outlined that technical supervisors on monthly basis will keep under control the fulfillment of all the environmental mitigation measures included in ESMP, and report the deviations to ATDF.

A. Osipova presented the main provisions of the ESMF concerning to the social aspects of the Project. She emphasized that the project does not involve any resettlement as proposed area of the construction is public property and land allocation document is available.

A. Osipova explained mechanisms of public engagement and grievance redress mechanism (GRM) to be applied during project implementation. Elected grievance focal point at the community level Suqiasyan
Hrach was introduced to the community members. A. Osipova explained the purpose of Focal points at local level and welcomed participants to apply to Hrach in case of questions/feedback or grievances concerning to the project implementation. A. Osipova talked also about main socio-economic challenges including engagement of women, youth and vulnerable groups in distribution of benefits. She outlined that these groups should have equal opportunities to be engaged in project benefits.

A. Osipova informed the beneficiaries that they also have the option to contact ATDF directly to communicate their grievance if they are unable to, or do not wish to, go through the PIC grievance focal point. A. Osipova explained all the cannels of grievance submission involving e-mail address, hot line telephone number, postal address and web-site link and outlined that ATDF contact information is reflected on the booklets delivered to the participants, as well as on the information desk to be posted in public visible places in the Community, including Community Administrative Office building. A. Osipova introduced that information on Micro-project details permanently will be available on the information desks, as well as on-going announcements and references. She outlined that these will support to raising public awareness and early identification, assessment and resolution of complaints on Project activities.

The participants were welcomed to raise questions regarding to the discussed questions. Following questions were raised by the participants:

**Zohrab Navoyan:** We would like to welcome the Project and outline that this project is very important for the Community as it will enable us to have regular and clean potable water at our houses. Besides, I would like to outline that the Community also has issue regarding to irrigation water supply system which is very unfavorable in terms of agricultural development.

**Levon Safaryan:** The other issues of the Community involve lack of kindergarten and bad conditions of inter-community roads.

**Hamlet Pogosyan:** In many cases people are not sure where to apply having grievances. I am very happy to hear that ATDF cares about the Communities. The established grievance mechanism is very important as it will enable to quickly raise the voice of community members.

**Hrach Suqiasyan:** We welcome the idea that you encourage involvement of community members at work activities. It will be very important for community members to have opportunity to be employed at project-related jobs as many households in our community depend on agricultural works which in many cases are not profitable.

There were raised technical questions on the next procedures of the Micro-project and start date which were answered by the Specialists.

The list of participants and photos are attached.
Annex 7: Copy of a Construction Permit
