FINAL ENVIRONMENTAL AND SOCIAL REVIEW CHECKLIST

Micro-project title: Reconstruction of the Kindergarten Building in Aygabats Community, Construction of a New Block

Micro-project #: TSH-05

Is the environmental management plan (ESMF) developed?
Yes + No ___

Does ESMF provide a full list of potential impacts and establish adequate measures for their mitigation?
Yes + No ___

</tr>
<tr>
<td>Scope of site-specific activity</td>
<td>Currently, the community lacks a kindergarten. Parents of pre-school aged children have to take their children to kindergartens in Gyumri. The existing kindergarten used to have three buildings connected with warm passage and staircase which was envisaged for 100 children. Sizes of group buildings are 2<em>13.45</em>15.45m and sizes of staircase are 12.8*7.0m. After earthquake, the dismantling of the building based on private interests has started but remained incomplete. Building’s walls are made of tufa. Covers are made of reinforced-concrete round-hole slabs. The hip roof with an asbestos-slate cover is damaged. The following is planned under the micro-project: dismantling the second floor of the existing kindergarten building which had its pillars and foundations dismantled in the past; construction of an ancillary building in replacement of a dismantled section of the warm passage which will comprise a kitchen, laundry and thermal block; reinforcement, fundamental renovation and roof coating of the existing building of the kindergarten; replacement of floors, clefts, internal renovation, construction of internal and external engineering networks and installation of equipment; installation of internal heating and ventilation networks; construction of a cesspool are also envisaged by the project. Heating will be provided through wall mounted turbo boilers and panel batteries. Natural gas has been considered as the main fuel. Solar panel batteries with dimensional heat exchangers have been applied for warm water supply. &quot;Brechka&quot; type blind area is planned surrounding the building. Landscape gardening, improvement of the area, asphalting of access roads, construction of playgrounds, a new fence surrounding the area are included under the micro-project.</td>

## LEGISLATION
National & local legislation & permits that apply to project activity

Reconstruction of the kindergarten building and construction of a new block is not subject to the Environmental Impact Assessment and to the issuance of the expert environmental review conclusion.

According to the Armenian legislation, the following permissions are required for this micro-project:

(a) Land ownership;
(b) construction permit;
(c) permission for the disposal of construction waste, and
(d) certificate of sanitary inspection

Operation of the building requires additional permissions certifying that technical parameters established for electric, gas, water supply and sewage appliances are met.

Will the site activity include/involve any of the following?

---

1 Land acquisitions includes displacement of people, change of livelihood encroachment on private property this is to land that is purchased/transferred and affects people who are living and/or squatters and/or operate a business (kiosks) on land that is being acquired.

2 Toxic / hazardous material includes but is not limited to asbestos, toxic paints, noxious solvents, removal of lead paint, etc.
## PART C: MITIGATION MEASURES

<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES (provide costs where applicable)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>0. General Conditions</strong></td>
<td>Notification and Worker Safety</td>
<td>(a) The local construction and environment inspectorates and communities have been notified of upcoming activities  &lt;br&gt; (b) The public has been notified of the works through appropriate notification in the media and/or at publicly accessible sites (including the site of the works)  &lt;br&gt; (c) All legally required permits have been acquired for construction  &lt;br&gt; (d) The Contractor formally agrees that all work will be carried out in a safe and disciplined manner designed to minimize impacts on neighboring residents and environment.  &lt;br&gt; (e) Workers’ PPE will comply with international good practice (always hardhats, as needed masks and safety glasses, harnesses and safety boots)  &lt;br&gt; (f) Appropriate signposting of the sites will inform workers of key rules and regulations to follow.</td>
</tr>
<tr>
<td><strong>A. General Construction Activities</strong></td>
<td>Air Quality</td>
<td>(a) During interior demolition debris-chutes shall be used above the first floor  &lt;br&gt; (b) Demolition debris shall be kept in controlled area and sprayed with water mist to reduce debris dust  &lt;br&gt; (c) During pneumatic drilling/wall destruction dust shall be suppressed by ongoing water spraying and/or installing dust screen enclosures at site  &lt;br&gt; (d) The surrounding environment (sidewalks, roads) shall be kept free of debris to minimize dust  &lt;br&gt; (e) There will be no open burning of construction / waste material at the site  &lt;br&gt; (f) There will be no excessive idling of construction vehicles at sites</td>
</tr>
<tr>
<td></td>
<td>Noise</td>
<td>(a) Construction noise will be limited to restricted times agreed to in the permit  &lt;br&gt; (b) During operations the engine covers of generators, air compressors and other powered mechanical equipment shall be closed, and equipment placed as far away from residential areas as possible</td>
</tr>
<tr>
<td></td>
<td>Water Quality</td>
<td>(a) The site will establish appropriate erosion and sediment control measures such as e.g. hay bales and / or silt fences to prevent sediment from moving off site and causing excessive turbidity in nearby streams and rivers.</td>
</tr>
<tr>
<td></td>
<td>Waste Management</td>
<td>(a) Waste collection and disposal pathways and sites will be identified for all major waste types expected from demolition and construction activities.  &lt;br&gt; (b) Mineral construction and demolition wastes will be separated from general refuse, organic, liquid and chemical wastes by on-site sorting and stored in appropriate containers.  &lt;br&gt; (c) Construction waste will be collected and disposed properly by licensed collectors  &lt;br&gt; (d) The records of waste disposal will be maintained as proof for proper management as designed.  &lt;br&gt; (e) Whenever feasible the contractor will reuse and recycle appropriate and viable materials (except asbestos)</td>
</tr>
<tr>
<td><strong>B. Individual wastewater treatment system</strong></td>
<td>Water Quality</td>
<td>(a) The approach to handling sanitary wastes and wastewater from building sites must be approved by the local authorities  &lt;br&gt; (b) Before being discharged into receiving waters, effluents from individual wastewater systems must be treated in order to meet the minimal quality criteria set out by national guidelines on effluent quality and wastewater treatment  &lt;br&gt; (c) Monitoring of new wastewater systems (before/after) will be carried out  &lt;br&gt; (d) Construction vehicles and machinery will be washed only in designated areas where runoff will not pollute natural surface water bodies.</td>
</tr>
<tr>
<td><strong>C. Historic building(s)</strong></td>
<td>Cultural Heritage</td>
<td>(a) If the building is a designated historic structure, very close to such a structure, or located in a designated historic district, notification shall be made and approvals/permits be obtained from local authorities and all construction activities planned and carried out in line with local and national legislation.  &lt;br&gt; (b) It shall be ensured that provisions are put in place so that artifacts or other possible “chance finds” encountered in excavation or construction are noted and registered, responsible officials contacted, and works activities delayed or modified to account for such finds.</td>
</tr>

</tbody>
</table>
| **D. Acquisition of land** | Land Acquisition Plan/Framework | (a) If expropriation of land was not expected but is required, or if loss of access to income of legal or illegal users of land was not expected but may occur, that the Bank’s Task Team Leader shall be immediately consulted.  
(b) The approved Land Acquisition Plan/Framework (if required by the project) will be implemented. |
| **E. Toxic Materials** | Asbestos management | (a) If asbestos is located on the project site, it shall be marked clearly as hazardous material  
(b) When possible the asbestos will be appropriately contained and sealed to minimize exposure  
(c) The asbestos prior to removal (if removal is necessary) will be treated with a wetting agent to minimize asbestos dust  
(d) Asbestos will be handled and disposed by skilled & experienced professionals  
(e) If asbestos material is be stored temporarily, the wastes should be securely enclosed inside closed containments and marked appropriately. Security measures will be taken against unauthorized removal from the site.  
(f) The removed asbestos will not be reused. |
| **F. Affected forests, wetlands and/or protected areas** | Protection | (a) All recognized natural habitats, wetlands and protected areas in the immediate vicinity of the activity will not be damaged or exploited, all staff will be strictly prohibited from hunting, foraging, logging or other damaging activities.  
(b) A survey and an inventory shall be made of large trees in the vicinity of the construction activity, large trees shall be marked and cordoned off with fencing, their root system protected, and any damage to the trees avoided  
(c) Adjacent wetlands and streams shall be protected from construction site run-off with appropriate erosion and sediment control feature to include by not limited to hay bales and silt fences  
(d) There will be no unlicensed borrow pits, quarries or waste dumps in adjacent areas, especially not in protected areas. |
| **G. Disposal of medical waste** | Infrastructure for medical waste management | (a) In compliance with national regulations the contractor will insure that newly constructed and/or rehabilitated health care facilities include sufficient infrastructure for medical waste handling and disposal; this includes and not limited to:  
- Special facilities for segregated healthcare waste (including soiled instruments “sharps”, and human tissue or fluids) from other waste disposal; and  
- Appropriate storage facilities for medical waste are in place; and  
- If the activity includes facility-based treatment, appropriate disposal options are in place and operational. |
| **H. Traffic and Pedestrian Safety** | Direct or indirect hazards to public traffic and pedestrians by construction activities | (a) In compliance with national regulations the contractor will insure that the construction site is properly secured and construction related traffic regulated. This includes but is not limited to  
- Signposting, warning signs, barriers and traffic diversions: site will be clearly visible and the public warned of all potential hazards  
- Traffic management system and staff training, especially for site access and near-site heavy traffic. Provision of safe passages and crossings for pedestrians where construction traffic interferes.  
- Adjustment of working hours to local traffic patterns, e.g. avoiding major transport activities during rush hours or times of livestock movement  
- Active traffic management by trained and visible staff at the site, if required for safe and convenient passage for the public.  
- Ensuring safe and continuous access to office facilities, shops and residences during renovation activities, if the buildings stay open for the public. |

MINUTES

Of Public Consultations
on draft Environmental and Social Management Plan
for the Reconstruction of the Kindergarten Building in Aygabats Community and Construction of a New Block

A stakeholder consultation meeting on the draft Environmental and Social Management Plan (ESMP) for the reconstruction of the kindergarten building and construction of a new block in Aygabats Community was held on March 29, 2016 in Aygabats community, Shirak Marz.

The announcement for the meeting in Armenian and English languages, including its date and time, was disclosed on the ATDF web page (www.atdf.am) on 22 March, 2016. Information on the meeting day and time was posted on information boards of Aygabats Community Administration Office; in addition the Administration conducted telephone calls to ensure participants’ attendance.

The public consultation was carried out by ATDF Social Specialist Sonya Msryan and ATDF Environmental Specialist Asya Osipova. 27 participants were present at the meeting, among which 7 women (about 26%).

At the very beginning, Head of the Community Mr. Sasunik Vanetsyan introduced the main purpose of the consultation and ATDF specialists.

A. Osipova introduced the main purpose as well as World Bank requirements and Armenian legislation on conducting environmental and social assessment. She reasoned the need to develop ESMP, specifying that the Micro-project involves construction of a new block in addition to reconstruction of the old building. She outlined likely negative environmental impacts related to the Micro-project implementation. These include pollution of air, generation of construction waste, removal of asbestos materials from the construction site and direct or indirect hazards to public traffic and pedestrians by construction activities. She also talked about waste-water management issue including sewage pit construction and disposal of accumulated sewer.

Ms. Osipova explained what measures ATDF will apply to mitigate possible negative impacts, including construction waste and asbestos materials transportation. It was mentioned that ESMP covers the issue of the transportation and disposal of construction wastes and excessive soil.

Since the kindergarten area is not fenced and is located in the center of the Community, A. Osipova talked about safety measures for community members and workers and disturbance to community life due to construction activities. Technical supervisors on monthly basis will keep under control the fulfillment of all the environmental mitigation measures included in ESMP, and report the deviations to ATDF.

S. Msryan presented the main provisions of the ESMF concerning to the social aspects of the Project. She emphasized that the project does not involve any resettlement as proposed area of the construction is public property and land ownership certificate is available issued by Cadaster.
S. Msryan talked also about main socio-economic challenges including engagement of women, youth and vulnerable groups in distribution of benefits. She outlined that these groups should have equal opportunities to be engaged in project benefits.

Ms. Msryan explained mechanisms of public engagement and grievance redress mechanism (GRM) to be applied during project implementation. Elected grievance focal point at the community level Karine Balasanyan was introduced to the community members. S. Msryan explained the purpose of Focal points at local level and welcomed participants to apply to Karine in case of questions/feedback or grievances concerning to the project implementation.

S. Msryan informed the beneficiaries that they also have the option to contact ATDF directly to communicate their grievance if they are unable to, or do not wish to, go through the PIC grievance focal point. S. Msryan explained all the channels of grievance submission involving e-mail address, hot line telephone number, postal address and web-site link and outlined that ATDF contact information is reflected on the booklets delivered to the participants, as well as on the information desk already posted in public visible places in the Community, including Community Administrative Office building. S. Msryan introduced that information on Micro-project details permanently will be available on the information desks, as well as on-going announcements and references. She outlined that these will support to raising public awareness and early identification, assessment and resolution of complaints on Project activities.

The participants were welcomed to raise questions regarding to the discussed questions. Following questions were raised by the participants:

Martirosyan Tigranuhi asked whether the territory will be fenced after the reconstruction. The specialists introduced that the territory will be rehabilitated and fenced as it is governmental requirement for the kindergartens to have fenced playgrounds.

Chaloyan Aristakes introduced that the Community members will be glad to organize tree planting at the surrounding areas of the kindergarten specifying that it will be efficient to organize whenever the building is fenced.

Arkadi Altunyan asked whether there is possibility to involve workers from the Community. S. Msryan explained that those questions should be discussed with Constructor Company and PIC during contract negotiations. ATDF as well as WB encourages involvement of workers from the Community, especially those from vulnerable families, women and youth. If job opportunities are available on Project-related field those groups should have equal opportunities to be involved in project benefits.

Apinyan Artak said that creation of job opportunities will strongly support to the Community as the majority incomes of the families are related to seasonal immigration works. He outlined that especially the youth has to leave for seasonal works because of the unemployment existing in the country.

Sasunik Vanetsyan said that the kindergarten will have positive demographic impacts on the Community. In addition, the operation of kindergarten will enable to create 10-12 jobs intending especially involvement of women labor force.
