LIFELINE ROAD NETWORK IMPROVEMENT PROJECT

ENVIRONMENTAL MANAGEMENT PLAN FOR SMALL SCALE ROAD REHABILITATION

REHABILITATION OF THE SECTION AT KM 0+000 – KM 5+872 OF THE ROAD M2-SISIAN OF THE RA SYUNIK MARZ

March 2016
### INSTITUTIONAL & ADMINISTRATIVE

**Scope of project and activity**

The project envisages rehabilitation of the km 0+000 – km 5+872 section of the M2-Sisian road.

Design work is done in accordance with acting norms and standard designs.

The main technical parameters of existing road adopted in the design are the following:

- **Subgrade width**: 12.0-15.0m
- **Carriageway width**: 6.6-11.0m
- **Width of shoulders**: 0.6-2.1m
- **Sidewalk**: 0.5-1.5m

The following works are designed on the basis of visual observation, topography and geological surveys, laboratory test result and environmental measures:

- Rehabilitation of the subgrade.
- Restoration of the drainage system (repair and construction of culverts), construction of side ditches and chutes.
- Rehabilitation and reconstruction of pavement.
- Filling of shoulders.
- Road furnishing (access ramps, sidewalks, guardrails, traffic signs and road marking).

### SITE DESCRIPTION

**Name of site**

M2-Sisian road section

**Describe site location**

Syunik Marz

**Who owns the land?**

Community / State

**Description of geographic, physical, biological, geological, hydrographic and socio-economic context**

Administratively, the road section belongs to Syunik Marz. It starts from M-2 road and ends in Sisian community. The relief is foothills, mountainous with hill-knolls. Absolute altitude marks vary between 1650-1800m. Hydrologically, the section is located in the landscape-hydrological zone of Vorotan and Meghri rivers. No mudflows occur on the territory.

The construction site is located in III Climatic zone. Weather in summer is warm and weather in winter is moderate cold. Annual average air temperature 6.9°C. Average temperature in the coldest month -4.8°C. Average temperature in the warmest month 17.9°C. Absolute maximum temperature in summer 36°C. Minimum temperature in winter -34°C. Annual average wind speed 2.4 m/sec. Annual precipitation 392 mm. Maximum depth of soil freezing 92cm.

The project road is ending in the Sisian city. The number of main population of this community is about 14894 people, from which about 51.3% are women.

**Locations and distance for material sourcing, especially aggregates,**

Water to be supplied for construction works will be delivered to construction sites in tanks or provided from a source for which the Water Use Permit is issued to allow water intake. Aggregates will be obtained from the licensed providers located within the project area. Contractor may also extract aggregates, in this case contractor must obtain an extraction license prior to commencement of extraction. Asphalt will be purchased from an official
| LEGISLATION | Environmental permits required for accomplishing the works envisaged by the project:  
- Construction license to be possessed by Construction Contractor,  
- Construction permit to be obtained by the Construction Contractor from rural municipality,  
- Mining license to be possessed by Construction Contractor in case it operates a borrow pit,  
- Agreement for disposal of construction waste to be obtained by Construction Contractor from Community leader. |

\(^1\) Land acquisitions includes displacement of people, change of livelihood encroachment on private property this is to land that is purchased/transferred and affects people who are living and/or squatters and/or operate a business (kiosks) on land that is being acquired.

\(^2\) Toxic / hazardous material includes but is not limited to asbestos, toxic paints, noxious solvents, removal of lead paint, etc.
### PART 3: MITIGATION MEASURES

<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES CHECKLIST</th>
</tr>
</thead>
</table>
| **0. General Conditions** | Notification and Worker Safety | (a) The local construction and environment inspectorates and communities have been notified of upcoming activities  
(b) The public has been notified of the works through appropriate notification in the media and/or at publicly accessible sites (including the site of the works).  
(c) All legally required permits have been acquired for construction and/or rehabilitation.  
(d) The Contractor formally agrees that all work will be carried out in a safe and disciplined manner designed to minimize impacts on neighboring residents and environment.  
(e) Workers' PPE will comply with international good practice (hardhats, as needed masks and safety glasses, harnesses and safety boots).  
(f) Appropriate signposting of the sites will inform workers of key rules and regulations to follow. |
| **A. General Rehabilitation and/or Construction Activities** | Air Quality | (g) During excavation works dust control measures shall be employed, e.g. by spraying and moistening the ground.  
(h) Demolition debris, excavated soil and aggregates shall be kept in controlled area and sprayed with water mist to reduce debris dust.  
(i) During pneumatic drilling or breaking of pavement and foundations dust shall be suppressed by ongoing water spraying and/or installing dust screen enclosures at site.  
(j) The surrounding environment (sidewalks, roads) shall be kept free of soil and debris to minimize dust.  
(k) There will be no open burning of construction / waste material at the site.  
(l) All machinery will comply with the national emission regulations, will be well maintained and serviced and there will be no excessive idling of construction vehicles at sites. |
| | Noise | (a) Construction noise will be limited to restricted times agreed to in the permit.  
(b) During operations the engine covers of generators, air compressors and other powered mechanical equipment shall be closed, and equipment placed as far away from residential areas as possible. |
<p>| | Water Quality | (a) The site will establish appropriate erosion and sediment control measures such as e.g. hay bales and / or silt fences to prevent sediment from moving off site and causing excessive turbidity in canalization and nearby streams and rivers. |</p>

| E. Toxic materials                           | Asbestos management              | (a) If asbestos is located on the project site, it shall be marked clearly as hazardous material.  
(b) When possible the asbestos will be appropriately contained and sealed to minimize exposure.  
(c) The asbestos prior to removal (if removal is necessary) will be treated with a wetting agent to minimize asbestos dust  
(d) Asbestos will be handled and disposed by skilled & experienced professionals.  
(e) If asbestos material is stored temporarily, the wastes should be securely enclosed inside closed containments and marked appropriately. Security measures will be taken against unauthorized removal from the site.  
(f) The removed asbestos will not be reused. |
|                                              | Toxic / hazardous waste management | (a) Temporarily storage on site of all hazardous or toxic substances will be in safe containers labeled with details of composition, properties and handling information.  
(b) The containers of hazardous substances shall be placed in a leak-proof container to prevent spillage.  
(c) The wastes shall be transported by specially licensed carriers and disposed in a licensed facility.  
(d) Paints with toxic ingredients or solvents or lead-based paints will not be used.                                                                                                                                 |
| F. Affected forests, wetlands and/or protected areas | Ecosystem protection           | (a) All recognized natural habitats, wetlands and protected areas in the immediate vicinity of the activity will not be damaged or exploited, all staff will be strictly prohibited from hunting, foraging, logging or other damaging activities.  
(b) A survey and an inventory shall be made of large trees in the vicinity of the construction activity, large trees shall be marked and cordoned off with fencing, their root system protected, and any damage to the trees avoided.  
(c) Adjacent wetlands and streams shall be protected from construction site run-off with appropriate erosion and sediment control feature to include by not limited to hay bales and silt fences.  
(d) There will be no unlicensed borrow pits, quarries or waste dumps in adjacent areas, especially not in protected areas.                                                                                                                                                                           |
<p>| G. Risk of unexploded ordinance (UXO)        | Hazard to human health and safety | (a) Before start of any excavation works the Contractor will verify that the construction area has been checked and cleared regarding UXO by the appropriate authorities.                                                                                     |</p>

</table>
| **H Traffic and pedestrian safety** | Direct or indirect hazards to public traffic and pedestrians by construction activities | (a) In compliance with national regulations the Contractor will insure that the construction site is properly secured and construction related traffic regulated. This includes but is not limited to:  

- Signposting, warning signs, barriers and traffic diversions: site will be clearly visible and the public warned of all potential hazards,  
- Traffic management system and staff training, especially for site access and near-site heavy traffic. Provision of safe passages and crossings for pedestrians where construction traffic interferes,  
- Adjustment of working hours to local traffic patterns, e.g. avoiding major transport activities during rush hours or times of livestock movement,  
- If required, active traffic management by trained and visible staff at the site for safe passage for the public,  
- Ensuring safe and continuous access to all adjacent office facilities, shops and residences during construction. |

STATEMENT
Public Consultation

The Detail Design and Environmental Management Plan of the MP-Sisian road rehabilitation has been prepared by the Local Company "Deeproject Institute" within the framework of the World Bank financed Lifeline Roads Network Improvement Project. The project road passes through the community of Sisian. During the survey and design the engineering team had closely worked with the head of communities to incorporate the public requests, suggestion and comments into the final Detail Design. The aim of this public consultation is to present and discuss the prepared Detail Design and Environmental Management Plan, and to ensure that the public concerns are incorporated in the project. Head of communities were informed prior about the date, time and place of the public consultation.

The design provides for all works for pavement rehabilitation, sidewalk and drainage restoration, and erosion and embankment, as well as there are presented an Environmental Management Plan for the mentioned road section, in particular potential adverse environmental impacts during implementation of rehabilitation works and after their completion, measures to be taken to prevent, mitigate and minimize those impacts, and parties responsible for implementation. Also, there have been submitted the main four sections of the Environmental Management Plan developed in a checklist format. Taking into account that the designed works are rehabilitation in nature and will be carried out on the existing road, one can conclude that potential adverse impacts on the environment will be low-level, short-term and entirely work-related, and there will arise no need for right-of-way.

The Environmental Management Plan was thoroughly discussed with the authorities and residents of the community of Sisian. During discussions, the designers presented works designed for all repair sections, including earthworks, carriageway rehabilitation, sidewalk construction, repair of drainage system, repair of approach roads and access ramps, especially access ramps to the main public places.

During works for rehabilitation of the road section passing through the village, no land or other property issue will arise on the whole territory of the Sisian community. At the same time, design works include solutions for the necessary drainage and safety, as well as pavement rehabilitation problems. Places of agricultural crossings are agreed with heads of communities.

After the presentation the participants were welcomed to ask questions. The questions raised during the meeting and corresponding answers as well as photos made are attached to this statement below. In the end of the Public consultation the participants were asked to sign the statement of the Public Consultation as an approval of the Detail Design and Environmental Management Plan for the MP-Sisian road.

We hereby give our consent to the Detail Design and Environmental Management Plan for the MP-Sisian road and confirm that our request and suggestions are incorporated.

Head of Sisian community: [Signature]
Member of the community: [Signature]
Member of the community: [Signature]
Member of the community: [Signature]
Representative of "Transport PIL" SE: [Signature]

Experts: [Signature]
1. Question (Chief of staff of Sisian community) – What measures have been foreseen to approach Zorats Karer memorial complex?
   ➢ Answer (CPE M. Aleksanyan) Rehabilitation of the junction and two parking lots for approaching Zorats Karer memorial complex has been foreseen in the design.

2. Question (Architect of Sisian community) – What measures have been foreseen for the drainage in Sisian city?
   ➢ Answer (CPE M. Aleksanyan) – It is designed to implement drainage with r/c chutes and metal culverts.

3. Question (Residents of Sisian community) – What measures are foreseen in the design for ensuring traffic safety?
   ➢ Answer (CPE M. Aleksanyan) – For ensuring traffic safety it is designed corresponding amount of road signs and markings according to the standards, which is approved by the traffic police.

4. Question (Residents of Sisian community) – Whether rehabilitation of the sidewalks is included in the design?
   ➢ Answer (CPE M. Aleksanyan) – It is designed to replace existing destroyed sidewalk pavement with new one, to install new basalt curb stones, construct new sidewalks in Sisian city.

5. Question (Residents of Sisian community) – When will the construction be started.
   ➢ Answer (CPE M. Aleksanyan) – The construction will start this year after the bidding procedure and selection of the Contractor.
