Implementation Status Overview
The Material Recovery Facility which sorts and recycles solid waste became fully operational in February 2012, but the construction of the Composting Facility to process the organic and compostable wastes was never constructed due to failure to secure adequate funding. As a result, the project was never successfully completed nor registered with the United Nation Framework Convention on Climate Change. The project is currently under liquidation by the commercial banks. For these reasons, no Certified Emission Reductions will be generated by the end of the project in December 2013.
