1. INTRODUCTION

1.1 BACKGROUND

This Environmental and Social Management Framework (ESMF) prepared for the Third Rural Water Supply and Sanitation Project (RWSSP-3) financed by the International Development Association (IDA) and the Kyrgyz Republic covers procedures and mechanisms that will be triggered by the Project to comply with the World Bank Policy 4.01 Environmental Assessment\(^1\), legislation and normative and legal acts of the Kyrgyz Republic governing preparation and implementation of environmental protection requirements.

ESMF will allow ensuring environmental and social sustainability of activities throughout their implementation cycle and to provide the ARIS’ engineering and technical staff (ETS) and consultants with adequate institutional, normative and technical framework for future processes and procedures that should be observed when:

(i) Identifying Environmental and Social Assessment implementation arrangements, including assessment of conflict stressors and potential transboundary impact of activities implemented under the RWSSP-3;

(ii) Developing separate ESMPs for each subproject integrating the complex of social and environmental impact mitigation measures, environmental monitoring and institutional responsibility into the general project implementation plan by including the EMP into the bidding documents to ensure funding and supervision along with other components of the subproject;

(iii) Identifying requirements for environmental monitoring and activities on institutional strengthening conducive to beneficial impacts of the project.

1.2 PROJECT CONCEPT

1.2.1 Project objectives and geographic coverage

The objective of the Project is to assist the Kyrgyz Republic to (i) improve access and quality of water supply and sanitation services in target rural communities, and (ii) strengthen capacity of institutions in the water supply and sanitation (WSS) sector. The Project is expected to cover the Panfilovka, Sultan, Kun-Tuu, Alekseevka, Kyzyl-Tuu, Tolok subprojects in Chui Oblast, Otuz-Adyr, Kyrgyz-Ata, Togotoi, Gulbaar, Sary-Tash, Achyk-Suu subprojects in Osh oblast; Darhan, Chelpek in Issyk-Kul oblast as marked on the following map.

---

\(^1\) Annex C OP/BP 4.01. January 1999
1.2.2. Project Components

The project is expected to benefit more than 105,000 people residing within the participating rural villages in Osh, Chui and Isyk-Kul Oblasts. The majority of beneficiaries within the project areas will be provided with access to piped water services through a new household connection. Furthermore, some 14,000 people (mostly children), will directly benefit through the investments in sanitation facilities and associated hygiene, nutrition and behavior change interventions in schools and other eligible public institutions (for example, health clinics).

The RWSSP-3 has been structured in four components. A summary of activities to be financed under each Component is provided below.

Component 1. Water supply infrastructure and equipment investments. This component will address the needs for rehabilitation of existing and/or construction of new water supply systems in the target areas. The component will finance goods, works and services (including engineering design and construction supervision) and will include civil and electrical/mechanical installations for water supply production (boreholes, well-fields, intakes, etc., as well as disinfection, and pumping as required), and transmission and distribution (networks, storage, meters, etc.) to households in the project areas. This component will also finance preparatory activities including detailed engineering designs for scaling up investments under the program.

Component 2: Sanitation Development. This component will finance goods, works and services to provide strategic support for improved sanitation within the target rural communities and to enhance the Government’s strategy for improved sanitation in rural areas. It will include, retrofitting of existing sanitary facilities in schools, kindergartens and possibly other public buildings (e.g. health clinics). It will also finance a range of other activities at the national and local levels towards supporting improved sanitation. This will include the development of a set of standard designs for latrines and septic systems for rural areas, this together with related education programs will support private household investments for these facilities.

Component 3: Development of sector strategies and institutions will support strategic studies and technical assistance to the Government in making informed policy decisions for the development,
modernization and reform of the WSS sector. It will also support consultancies and studies to help develop and implement (i) capacity building activities for State agencies; and (ii) capacity building activities for Community Drinking Water User Unions, local authorities, and other WSS local institutions.

Component 4: Project management. This component will finance the project management costs of the project management unit related to staffing, consultancies and equipment costs, Monitoring and Evaluation program, and financial management including internal and external financial audits.

2. WB SAFEGUARDS POLICIES AND PROCEDURES

2.1 REVIEW OF THE WB SAFEGUARD POLICIES (10+1)

The major document regulating the WB environmental safeguard policy is OP 4.01 Environmental Assessment, which is one of ten safeguard policies that the projects submitted for the Bank financing are to comply with.

Ten safeguard policies and the +1 policy on Access to Information represent the framework of safeguard mechanisms applied by the WB for the sake of interests of beneficiaries, clients, stakeholders and that of the Bank. Applying these policies allows avoiding adverse impacts on the environment and people’s lives, minimizing and mitigating potential unfavorable environmental and social project impacts.

1. Environmental Assessment (OP 4.01);
2. Natural Habitats (OP 4.04);
3. Pest management (OP 4.09);
4. Cultural Heritage (OP 4.11);
5. Forests (OP 4.36);
6. Safety of Dams (OP 4.37);
7. Involuntary Resettlement (OP 4.12);
8. Indigenous Peoples (OP 4.10);
9. International Waterways (OP 7.50);
10. Disputed Areas (OP 7.60);
+1. Access to Information

The first six policies are environmental policies and they are taken as focus during preparation of the Environmental Assessment. The seventh and eighth are social and the ninth and tenth are legal.

The objectives of 10+1 safeguard policies are to:

1) Avoid negative impacts where possible; otherwise minimize, reduce, mitigate, compensate;
2) Match level of review, mitigation and oversight to level of risk and impacts;
3) Inform the public and enable people to participate in decisions which affect them;
4) Integrate environmental and social issues into project identification, design and implementation.

Principles of OP 10+1:
- In case of discrepancy between the requirements of OP 10+1 and those of the national legislation norms, the more stringent ones prevail;
- In case of conflict between the OP 10+1 and the national environmental requirements, the WB policies will prevail (even if some parts of the project are financed by the Government of the Kyrgyz Republic or third parties).

The legal basis for such approach is the Agreement ratified by the Jogorku Kenesh3 of the Kyrgyz Republic, which carries the force of an international treaty and prevails over the national legislative acts.

The major requirements of the environmental policies are stated in the Annex 4.

---

3 Jogorku Kenesh (JK) is the legislative body, the Parliament of the Kyrgyz Republic
2.2 SAFEGUARD AND OTHER MEASURES

The RWSSP-3 will not finance any activities with significant or irreversible environmental impacts, and therefore has triggered the WB environmental safeguard policy OP 4.01, with classification as Environmental Category "B".

The Project will focus on achieving concrete, verifiable and sustainable results in the improvement of actual Water & Sanitation Services (WSS) delivery to participating rural communities as well as providing critically needed support to State and local authorities to further their ability to develop and improve WSS sector policies and institutions and strengthen their capacity to efficiently implement the project and subsequently ensure technically and financially sustainable management of system operations. This will be achieved through rehabilitation and expansion of small existing village water supply systems in rural areas of the Kyrgyz Republic. The Project will serve rural populations that are already consuming water from the same river basins.

The Project will also include, minor works for retrofitting and upgrading existing sanitary facilities in schools and possibly other public buildings (e.g health clinics). It will also finance a range of other activities at the national and local levels towards supporting improved sanitation. This will include the development of a set of standard designs for latrines and septic systems for rural areas, this together with related education programs will support private household investments for these facilities.

The Project will also seek to support the Ayil Okmotu’s to put in place systems for safe septic sludge removal and treatment/disposal, including financing mechanisms and enabling regulations.

After survey of the implementation site, environmental sensitivity and the project scale, the following can be stated: (i) RWSSP-3 will not be implemented in proximity to environmentally critical areas (lagoon/wetland areas, forests and etc) and will not impact them. The Project will not have irreversible impacts and will not impact vulnerable ethnic minorities or cultural heritage sites. The Project is of limited scale, associated with moderate environmental risks that can be easily mitigated during its implementation.

The activities planned under the Project can have certain both positive and negative environmental and social impacts, as the project will improve socially important urban infrastructure and services.

The positive impacts include: (a) rational use of water resources following rehabilitation of water supply systems under Panfilovka, Sultan, Kun-Tuu, Alekseevka, Kyzyl-Tuu, Tolok, Otuz-Adyr, Kyrgyz-Ata, Togotoi, Gulbaar, Sary-Tash, Achyk-Suu, Darhan, Chelpek subprojects, which will bring environmental and social benefits; (b) support in protecting ground and surface water resources by promoting the construction and use of environmentally sound sanitation facilities for human waste disposal; (c) improved citizens’ skills and awareness in planning and implementation of local activities, with particular attention to environment protection, and (d) sustainable management of improved infrastructure by communities, which will bring environmental and social benefits related to natural resources management.

Potential adverse impacts of project implementation are mainly related to construction works on water intake, laying water mains and water supply networks during rehabilitation of water supply schemes under subprojects. These impacts are of temporary nature and are related to pollution of the air resulting from operation of vehicles and machinery, pollution with construction and domestic waste resulting in formation of dust, noise and vibration, movement of vehicles and machinery, dumping of construction materials and accumulation of construction waste and debris. Some risks associated with the project activities are conditioned by improper utilization of construction waste, asbestos–containing materials, minor operational and accidental leakage of fuels and lubricants.

All these potential adverse impacts will be mitigated by measures stipulated in this ESMF and individual plans to be developed for each subproject with the objective to prevent pollution and exhaustion of natural resources.

---

4 Safeguard requirements for dealing with asbestos are specified in Annex 5.
Use of construction materials that are hazardous to human health (e.g., asbestos, asbestos contained materials) will not be permitted. Asbestos contained materials waste will be collected, transported and finally disposed by applying special protective measures in accordance with the hazardous waste handling standards.

The RWSSP-3 requires mitigation measures under the following safeguard policies:

OP 4.01. Environmental Assessment;
OP 4.12. Involuntary Resettlement;
OP 7.50. International Waterways.

Environmental Assessment (OP 4.01). The anticipated environmental impacts of RWSSP-3 resulting from construction/rehabilitation of water supply systems under Panfilovka, Sultan, Kun-Tuu, Alekseevka, Kyzyl-Tuu, Tolok, Otuz-Adyr, Kyrgyz-Ata, Togotoi, Gulbaar, Sary-Tash, Achyk-Suu, Darhan, and Chelpek subprojects trigger this safeguard policy that requires carrying out environmental assessment and development of EMP.

The EA will determine potential adverse and favorable environmental impacts of the project and will recommend measures to prevent, minimize, mitigate or compensate for adverse impacts and improve environmental indicators.

The EMP will stipulate preventive and mitigation measures, carrying out environmental monitoring, fulfillment of institutional obligations, timeframe for implementation of activities and their costs in the project budget.

Involuntary Resettlement (OP 4.12). The project does not foresee considerable physical resettlement. Nonetheless, rehabilitation/construction of water distribution networks that will run through populated areas may require temporary land acquisition or change in livelihood. From this point of view, social safeguard measures stipulated by OP 4.12 will apply.

The Resettlement Policy Framework (RPF) developed in compliance with provisions of the OP 4.12 and included in the RWSSP-3 Operational Manual will serve as the guidelines for development of corresponding measures to mitigate and compensate for land acquisition and possible resettlement on land parcels that are not determined yet.

The RPF will guide all activities involving land acquisition, restriction of access to land or services or loss of property. Based on the RPF, a site-specific Resettlement Action Plan (RAP) will be prepared. The RAP will highlight potential project impacts indicating the scale of such possible impact on land use/access to land and structures and set amounts and procedures for payment of compensation and relocation allowances.

The Ministry of Finances of the Kyrgyz Republic will be responsible for payment of all compensations.

The ARIS’ tasks in this case include carrying out social screening, determining the necessity for development of a Resettlement Action Plan (RAP), conducting stakeholder consultations, elaboration of compensation measures, supervision and monitoring.

RAPs are to be developed after determining the exact site for construction works.

1. International Waterways (OP 7.50). OP 7.50 has been triggered because the project will finance rehabilitation, improvement, or minor additions/expansions to drinking water supply systems located within the transboundary basin of the Syr Darya, Talas and Chui Rivers. However, project interventions are not expected to adversely affect water quality or quantity to downstream other riparian states. It is anticipated that the nature of Project activities will not (i) cause appreciable harm to the other riparian states as it will not adversely change the quality or quantity of water flows, and (ii) will not be appreciably harmed by other riparian state’s possible water use. Infrastructure rehabilitation and modernization and water supply

8 Par. 7 of WB OP 4.01 EA Instruments. “Depending on the project, a range of instruments can be used to satisfy the Bank’s EA requirement: environmental impact assessment (EIA), regional or sectoral EA, environmental audit, hazard or risk assessment, environmental management plan (EMP). EA applies one or more of these instruments, or elements of them, as appropriate”.
management improvements should increase system efficiency, thereby generating water savings and providing users with a reliable water supply. Further, the project aims to improve efficiency of water use and to substantially reduce technical losses and high water consumption rates. Leakages will be reduced through infrastructure rehabilitation and replacement which will help conserve ground and surface water resources. Water conservation will be promoted through improved demand-management measures, i.e., replacement of continuously running communal stand pipes, replacement of communal stand pipes with household stand-pipes, and installation of individual meters.

The Exception from the requirement to notify other riparian’s under OP 7.50 has been granted because the nature of the Project activities meet the policy requirements mentioned in paragraph 1 (i) and (ii) above.

This Project does not trigger any of the following safeguard policies:

- **Natural Habitats (OP 4.04).** RWSSP-3 will not engage in changing the natural habitats;
- **Pest Management (4.09).** No pest management activities will be carried out under the Project;
- **Cultural Heritage (4.11).** The project will not impact cultural and national heritage objects; however, the environmental screening process will screen for the presence of physical cultural resources. In addition, chance find procedures will be included in all works contracts.
- **Forests (4.36).** The Project will not cover forests and forest areas;
- **Safety of Dams (4.37).** The Project does not finance construction or repair of dams; the project interventions are not expected to adversely affect water quality or quantity to downstream riparian states, and none of these infrastructure works would depend upon the operation of existing reservoirs and dams in these river basins. There will be no water supply systems that draw directly from a reservoir controlled by an existing dam.
- **Indigenous Peoples (4.10).** The Project does not impact indigenous people, ethnic minorities or tribal groups;
- **Disputed Areas (7.60).** The Project will not be implemented in disputed areas and thus will not trigger this strategy.
3. LEGISLATIVE AND INSTITUTIONAL FRAMEWORK

3.1 LEGAL FRAMEWORK FOR ENVIRONMENTAL ASSESSMENT AND MANAGEMENT

The main normative documents governing the environmental protection activities are:

The Constitution of the Kyrgyz Republic 2010 is the foundation for the whole normative and legal framework. It stipulates the right of all citizens for an environment favorable for human’s life and health and compensation for damage caused to health or property by nature management activities;

The Law “On Environmental Protection” is basis for comprehensive regulation of public relations in the sphere of interaction between the society and the nature. It sets basic principles of environmental protection and stipulates legal authorities for creating environmental quality, marking special protected territories, promulgation of rules and procedures for natural resources management, setting the environmental monitoring and oversight system, and reinforcing the emergency response procedures.

The law prohibits financing and implementation of projects involving the use of natural resources without obtaining the positive opinion of the state environmental expert review.

The Law on Environmental Expertise ensures compliance of economic and other activities with environmental requirements. This Law is applied to projects that may have environmental impact, including feasibility studies as well as projects for construction, reconstruction, development, re-equipment, other projects that may have environmental impact, regardless of their estimate cost and title or ownership type.

The law obliges the project initiator to submit necessary documentation related to the project and its environmental impact to the state environmental expertise. The Expert Commission of the State Agency on Environment Protection and Forestry is responsible for review of the submitted documentation.

Positive decision of the State Environmental Expertise is required to trigger financing or implementation of the project. Negative opinion will ban implementation of the project.

One of the main opportunities for citizen’s participation and their associations in decision making on environmental protection and rational nature management is public environmental expertise. Two types of environmental review are implemented in the Kyrgyz Republic: State Environmental Expertise and Public Environmental Expertise.

Based on the Law the risk categories for each subproject will be determined to fix arrangements for EIA.

The Law of KR “On Water” regulates relations in management and protection of water resources, prevention of adverse impact of economic and other activities on water bodies and waterworks facilities, reinforcement of legality in water related relations. This Law regulates the quantity and the quality of waters discharged to nature, prohibits discharge of industrial, domestic and other waste and effluents into water bodies.

The Law of the KR “On Interstate Use of Water Bodies, Water Resources and Water Management Facilities in the Kyrgyz Republic” sets forth principles and main directions of the state policy on interstate
use of water bodies, water resources and water management facilities of the Kyrgyz Republic. This is not a direct action law as the law enforcement arrangements are not developed yet.

Over one hundred fifty laws and normative acts on environmental protection can be found at http://www.nature.gov.kg/lawbase/index.htm.

The legislative acts listed above set forth the following key tasks on environment protection relevant to the RWSSP-3.

- Obligatory State Environmental Review (expertise);
- Natural resources management standards;
- Protection of atmospheric air, land and water from pollution and exhaustion;
- Improvement of environmental monitoring system;
- Norms of maximum safe levels of noise, vibration and other hazardous physical impacts.

### 3.2 INSTITUTIONAL FRAMEWORK FOR ENVIRONMENTAL ASSESSMENT AND MANAGEMENT

A range of government departments are responsible for management and protection of environment in the Kyrgyz Republic. The chief agency is the State Agency on Environment Protection and Forestry has the main mandate for implementation of legislation of environmental protection mentioned above.

Key government bodies related to the RWSSP-3:

1. State Agency on Environment Protection and Forestry - carries out state environmental expertise;  
2. State Inspectorate on environmental and technical information under the Government of the Kyrgyz Republic – controls compliance with norms and rules of nature management and protection;  
3. State Agency for Geology and Mineral Resources – source of information on reserves of ground waters;  
4. Department for Sanitary Epidemiological Supervision – defining quality characteristics of drinking water;  
5. Department of Water Management and Melioration – use of water resources, including interstate water apportioning issues;  
6. Agency for hydrometeorology – hydrological features of surface waters.

### 3.3 ENVIRONMENTAL IMPACT ASSESSMENT ARRANGEMENTS AND PARTICIPANTS

EIA is a national procedure of environmental impact assessment when the project initiator determines adverse environmental impacts, ensures public participation, evaluates consequences of such impacts and proposes measures for their mitigation. EIA is carried out for activities subject to obligatory environmental review according to the Law of the Kyrgyz Republic “General Technical Regulations on Ensuring Ecological Safety in the Kyrgyz Republic”. The list of such activities is attached as Annex 1.

Undoubtedly, there are discrepancies between the international and domestic requirements in terms of approaches, criteria and grounds for conducting EIA. Some of these differences are shown in the following table.

Table 3.3.1 Major differences between the international and the national approaches to EIA
International Approaches | National Approaches
--- | ---
Requirements for compliance of projects with environmental protection measures are determined by the WB | Requirements for compliance of projects with environmental protection measures are determined by the government bodies and the project initiator.

Prior to investment stage and initial stage the projects are classified by the degree of potential environmental impact and the need for EA/ESMF of the proposed project is determined. | EIA is required for any project, regardless of its technological complexity, the volume of capital investments and degree of environmental impact. 10

EA/ESMF materials are reviewed by creditors and investors. | EIA materials are subject to review of government bodies following the two-stage system.

The EA at the prior-to-investment and investment stages is based on requirements to instrumental monitoring of environment and correspondence of findings to the national environmental protection standards. | The EIA at the prior-to-investment and investment stages the study is based on calculation methods, scientific analysis, comparison with similar projects and forecast evaluations.

The environmental risks are evaluated by creditors, investors, owners and serve as one of the basis for decision making on the investment project. | The environmental risks are evaluated by government bodies that adopt decision on possibility of implementation of the investment project of entities of any form of ownership.

Actors of the RWSSP-3 EIA are listed in the following table.

Table 3.3.2 Participants of the RWSSP-3 EIA

<td>It carries out state environmental expertise of EIA documentation and environmental monitoring.</td>
<td>They participate in consultations conducted under the EIA and receive information on potential adverse impact on the environment and public health.</td>
</tr>
</tbody>
</table>

In addition to environmental aspects, social impacts should be considered. These are gender and conflict sensitivity. While these do not fall under safeguards, yet are critical to successful implementation of the project. It is critical to ensure equal participation, consideration and reflection of interests and opinions of women throughout the project implementation.

10 Simplified EIA arrangements in the form of an Environmental Impact Statement (EIS) are foreseen for facilities with insignificant environmental impact (excerpt from the Regulations on carrying out Environmental Impact Assessment in the Kyrgyz Republic, 2015).

LIST

Of projects with insignificant environmental impact for which filling out an Environmental Impact Statement attached to the working design of the planned activity is sufficient for obtaining the opinion of the state environmental expertise

1. Open air parking lot with parking space for no more than 50 cars and garages with boxes for no more than two cars.
2. Design documents for certain housing, public and other non-production facilities that do not have autonomous sources of heat and water supply, waste water treatment facilities and grounds for solid waste, and located beyond the special protection natural areas, state forest reserves, protected water works, recreation areas, and not involving cutting of green plantations.
3. Design documents for production facilities that according to the opinion of sanitary epidemiological service do not require arrangement of sanitary and protection zones, and do not have autonomous sources of heat and water supply, waste water treatment facilities and grounds for solid waste, and located beyond the special protection natural areas, state forest reserves, protected water works, recreation areas, and not involving cutting of green plantations.

This list does not include urban development documentation of housing micro-districts, production and public zones of towns and other settlements as well as projects for planting of greenery (the EIS sample is provided in Annex 2).
Conflict stressors (long-term structural conditions) and triggers (short term events) have to be identified. Conflict stressors and triggers include, but are not limited to the following: low level of public trust in local self-government bodies, demographic growth, struggle for limited resources. Following visits to the priority project sites, potential conflict trigger factors were identified:

- **Potential inequality of services.** (access and quality) within project target areas. This relates to the opportunity of villages located upstream to receive more water than the consumption norm per capita compared to the villages located downstream due to lack of hydraulic regulation in gravity systems. Conflict may also arise in neighboring AOs not connected to the system, that used to get water from the common system (e.g. Kyrgyz-Ata Aiyol Okmotu).

- **Perception of or actual delay in implementation.** Communities want to receive better quality water supply services and had a disappointing experience of participation in an ADB funded project that failed to continue the initial investments. People may not understand or accept time frame needed for preparation, procurements and implementation.

- **Potential social resistance to tariff increase.** The Project provides for arrangement of individual connections to each household with installation of water meters. These works will be financed by the households themselves. With this kind of connection, the customer will have to pay for (actual) consumption based on a tariff that would cover operational expenses and maintenance costs. Even though the communities know about this, this issues remains unconfirmed and therefore, is a potential conflict trigger.

- **Changes in water consumption behavior and practice.** The customers will not be allowed to use drinking water (from the water supply system) for irrigation purposes under the project, or will be bound to pay high price for doing that. This requirement will lead to change in water consumption behavior and practice, and as such, it may be a potential source of tension. It is crucial that proper understanding of this issue is fostered through public consultation programs.

- **Transparency and management issues.** At the local level there might be negative perceptions regarding the local and national governments, which may also affect the project and trigger conflict.

- **Limited capacities of local self-government.** In addition to the point above, perceptions of low capacity of AO may also impact adversely the project design and implementation. However, such risk will be mitigated through efforts of ARIS that will be responsible for implementation. In addition, individual activities are stipulated by the Project that will be focused on local government capacity building.

**Gender issue also matters.** The projects will address the gender aspects in three ways: directions (i) analysis of the gender issues; (ii) specific measures to address special needs of women or girls, or men and boys; (iii) arrangements for monitoring of gender impact or support in gender differentiated analysis. This implies arrangement of certain activities aimed at addressing specific gender issues and incorporation of gender aspects in scope of support and ensuring equity in general. The following activities will be carried out: informing women about the future project, women will be mobilized to participate in the village meetings to ensure that their opinions are taken into account. Aiyl okmotu and CDWUUs will be encouraged to take women on their staff. These activities will be integrated into the project design, including the community consultation process.

4. ENVIRONMENTAL AND SOCIAL MANAGEMENT PLAN AND MONITORING PLAN

ARIS will follow the mechanism of development and execution of environmental documents according to correlative list throughout all RWSSP-3 development stages in line with the requirements of environmental legislation and the World Bank OP 4.01.

Detailed Design Estimates (DDEs) for all activities are believed to require a state environmental appraisal (SEA) under the provisions of the Kyrgyz legislation. ARIS will supervise the quality of sections “Environmental protection” to be drafted by a local consultant subject to subsequent review by the State Agency on Environment Protection and Forestry to obtain a positive opinion under SEA.

An individual (site-specific) Environmental and Social Management Plan (ESMP) will be produced for each water supply subproject, including detailed sections “Environmental protection” (as needed), a state
environmental appraisal, the activities ensuring environmental mitigation measures, institutional framework for preventative arrangements, environmental monitoring program with use of templates (Tables 4.1 and 4.2) based on the summary data given in Table 4.3. A checklist will be filled out for social infrastructure facilities (schools and kindergartens) (Template provided in Annex 2).

The ESMP outlines the mitigation, monitoring and institutional strengthening measures to be taken during project implementation to avoid or eliminate negative environmental impacts. For projects of intermediate environmental risk (Category B) an ESMP may be an effective way of summarizing the activities needed to achieve effective mitigation of negative environmental impacts.

The format below provides a model for development of an ESMP. The model divides the project cycle into three phases: construction, operation and decommissioning. For each phase, the preparation team identifies any significant environmental and social impacts that are anticipated based on the analysis done in the context of conducting an environmental review or preparing an environmental assessment (if required), as well as carrying out a SA. For each impact, mitigation measures are identified and listed. Estimates are made of the cost of mitigation actions broken down by estimates for installation (investment cost) and operation (recurrent cost). The ESMP format also provides for the identification of institutional responsibilities for installation and operation of mitigation devices and methods.

To keep track of the requirements, responsibilities and costs for monitoring the implementation of environmental mitigation identified in the analysis included in an environmental review or assessment for Category B projects, a monitoring plan should be prepared too. A format is provided below.

Like the ESMP the project cycle is broken down into two phases (construction, and operation). The format also includes a row for baseline information that is needed to achieve reliable and credible monitoring. The key elements of the matrix are:

- What is being monitored?
- Where is monitoring done?
- How monitoring will be carried out?/type of equipment for monitoring
- When or how frequently is monitoring necessary or most effective?
- Why is the parameter being monitored (what does it tell us about environmental impact)?

In addition to these questions, it is useful to identify the costs associated with monitoring (both investment and recurrent) and the institutional responsibilities. When a monitoring plan is developed and put in place in the context of project implementation, the ARIS will request reports from the contractors at appropriate intervals and include the findings in its periodic reporting to the World Bank and make the findings available to Bank staff in the course of supervision missions.

4.2 PUBLIC CONSULTATIONS

ARIS should undertake organization and holding of public consultations for groups that may be impacted by subproject before finalization of ESMP. These groups are usually represented by those who live near construction site, as well as by representatives of local NGOs, LSGBs and other stakeholders. Public consultations are planned to be held in Chui, Osh, Issyk-Kul oblasts to inform stakeholders on planned socio-economic safety measures and to research public opinion.

During public consultations stakeholders will be given an opportunity to express their views on any environment-related issues that may arise in the course of project implementation. All PAPs will be informed and meaningfully consulted on the project using accessible communication methods and language. Any reasonable issue raised at public consultation, will be included in ESMF. Views of the stakeholders will be taken into account during subproject implementation.

Public consultations usually take the form of meetings which enable the best information exchange: subproject initiators inform local communities on their activities and local communities are able to raise issues that are topical for them. Household visits will be used to inform vulnerable and marginalized categories of people (people with disabilities, landless persons, elderly). During public consultations the project beneficiaries will be informed about the grievance redress mechanism that they can utilize during various stages of the project.

There are also other acceptable methods that can be used for public opinion research such as questionnaires, round tables, etc. Minutes of public consultations shall be taken and results of public consultations should be recorded in final version of ESMP. ESMP should be developed for each subproject taking into account its specificity.

ESMP, design estimates for activities and results of public consultations should be submitted to the local office the State for Environmental Protection and Forestry to carry out project environmental impact assessment. Construction activities under subproject should not be started until the approval by the state ecological expertise is obtained (Reference: Law on Environmental Expert Assessment). The approval by the state ecological expertise should be kept with design estimates for activities for further surrender to operating entity.

4.3 PUBLIC DECLARATION OF THE RESULTS

ARIS should post ESMPs on its website after they are approved by the WB, and send them to relevant LSGBs in order they hang them on the information boards located in public places.

4.4 CONSTRUCTION-RELATED ACTIVITIES UNDER ESMP AND RESPONSIBILITY

ARIS is responsible for inclusion of all construction-related activities under ESMP in the bidding documentation package to be provided to construction bidders. One month after the results of tender are made public, a site-specific ESMP, elaborated by a contractor, should be approved and environmental monitoring should be carried out.

4.5 SUPERVISION AND REPORTING

ARIS visits construction sites at least once a quarter in order to supervise fulfillment of ESMP during subproject implementation. More visits may be required if any issues are identified. If there are topical environmental issues, ARIS should continue its supervision during facility operation. Site visits are made once a month at the start of a subproject, and if there are no problems identified, number of site visits can be reduced (once a quarter, semi-annually, annually).

Site visit report should be submitted after monitoring is performed. In the event of non-compliance with environmental protection measures, a statement specifying the remedial period for contractor should be drawn up. «Environmental protection» section will be included in regular subproject progress reports prepared by technical supervision engineers. The section should contain compressed information and briefly describe monitoring activities as well as any arising issues and the ways to address them.
ANNEXES

ANNEX 1. TYPES OF ECONOMIC ACTIVITIES SUBJECT TO EIA

1. Power engineering facilities:
1) central heating and power plants, heat power-stations, hydroelectric power stations;
2) industrial installations for production of electricity, steam and hot water;
3) gas-, oil-, oil products- and hot water pipelines;
4) high-voltage power transmission line;
5) warehouses for oil and oil products, gas and solid fuel;
6) ash dumps.

2. Reservoirs.

3. Enterprises engaged in extraction and processing of oil, oil products and gas.

4. Production of construction materials (cement, asphalt, asbestos sheeting, asbestos-cement pipes).

5. Farming:
1) farming intensification projects;
2) projects for land property management and reorganization;
3) projects for water resources management for farming purposes;
4) projects for land reclamation for changing the land use type;
5) poultry production units, intensive livestock units and fish farms;
6) land improvement projects.

6. Mining industry:
1) exploration and actual mining;
2) mineral output (carbonate of lime, basalt, salt, sand, gravel, clay, etc.);
3) coal mining;
4) ore mining;
5) ore treatment;
6) fabrication of base, rare and precious metals;
7) dispose and burial of waste, including hazardous and toxic waste.

7. Metal processing industry:
1) machine-building industry;
2) manufacturing of semiconducting materials;
3) air and railway transport repair services;
4) manufacturing of radio- and television equipment;
5) foundry and metal-rolling production.

8. Glass production.

9. Production of pharmaceutical drugs, biological and protein substances.

10. Chemical industry.

11. Food industry:
1) fats and oils production;
2) meat and dairy products production;
3) sugar production;
4) tobacco production;
5) wine, spirits production;
6) alcohol production;
7) brewing;
8) canned food production.

12. Textile, leather and paper making industry:
1) primary processing of leather and fur;
2) chipboard, board and fiberboard industries;
3) leather industry;
4) paper making industry;
5) dye industry;
6) manufacturing of industrial rubber.

13. Warehouses for toxic, hazardous and radioactive substances.

15. Water intake systems for ground water.
16. Water supply systems in residential areas, hydro land reclaiming systems.
18. Airports, fly ground, testing ground, inland ports, motordrome.
19. Construction of leisure and tourist facilities.
20. Arranging of industrial hub.
22. Mountain lifts and ski passes.
23. Disposal, recycling and burial of industrial and consumer waste.
24. Refueling stations.
25. Motor vehicle service and presale preparation stations.
ANNEX 2. EMP CHECKLIST FOR CONSTRUCTION AND REHABILITATION ACTIVITIES (SOCIAL INFRASTRUCTURE)

General Guidelines for use of EMP checklist:

For low-risk topologies, such as school and hospital rehabilitation activities, the ECA safeguards team developed an alternative to the current EMP format to provide an opportunity for a more streamlined approach to preparing EMPs for minor rehabilitation or small-scale works in building construction, in the health, education and public services sectors. The checklist-type format has been developed to provide “example good practices” and designed to be user friendly and compatible with safeguard requirements.

The EMP checklist-type format attempts to cover typical core mitigation approaches to civil works contracts with small, localized impacts. It is accepted that this format provides the key elements of an Environmental Management Plan (EMP) or Environmental Management Framework (EMF) to meet World Bank Environmental Assessment requirements under OP 4.01. The intention of this checklist is that it would be applicable as guidelines for the small works contractors and constitute an integral part of bidding documents for contractors carrying out small civil works under Bank-financed projects.

The checklist has three sections:

Part 1 includes a descriptive part that characterizes the project and specifies in terms the institutional and legislative aspects, the technical project content, the potential need for capacity building program and description of the public consultation process. This section could be up to two pages long. Attachments for additional information can be supplemented when needed.

Part 2 includes an environmental and social screening checklist, where activities and potential environmental issues can be checked in a simple Yes/No format. If any given activity/issue is triggered by checking “yes”, a reference is made to the appropriate section in the following table, which contains clearly formulated management and mitigation measures.

Part 3 represents the monitoring plan for activities during project construction and implementation. It retains the same format required for EMPs proposed under normal Bank requirements for Category B projects. It is the intent of this checklist that Part 2 and Part 3 be included into the bidding documents for contractors, priced during the bidding process and diligent implementation supervised during works execution.

ANNEX 3. ENVIRONMENTAL IMPACT STATEMENT

_________________________________________________________________________

(facility)

_________________________________________________________________________

Information about project initiator (postal address, telephone number, fax, e-mail)

_________________________________________________________________________

Financing sources: government budget, private/foreign investments, etc.)

_________________________________________________________________________

Location of facility (oblast, raion, residential area or the distance to and direction of the nearest residential area)

_________________________________________________________________________

Overall work duration

_________________________________________________________________________

(Years, months)

Project documents

_________________________________________________________________________

(feasibility study, feasibility analysis, design, working project, layout plan, etc.)

Design institute (main contractor)

_________________________________________________________________________

Design institutes (sub-contractors)

_________________________________________________________________________

Project chief engineer

_________________________________________________________________________

(Full name)

Environmental Specialist

_________________________________________________________________________

(Full name)
**CONDITIONS OF NATURAL RESOURCE USE AND POTENTIAL ENVIRONMENTAL IMPACT OF PROJECTED ACTIVITIES**

**OPEN AIR**

1. List of main components in emission
2. Assumed volume of emission by components (g/sec, t/years)
3. Assumed ground level concentration of hazardous substances at the boundary of sanitary protection zone (MPC)

**WATER BODIES**

1. Water supply sources:
   - For housekeeping and drinking needs
   - For industrial needs
2. Water intake (m³/year):
   - For housekeeping and drinking needs
   - For industrial needs
3. Total volume of waste water (m³/year):
   - Domestic water
   - Industrial water
4. Volume of disposed waste water (m³/year):
   - Into existing sewerage network
   - Into natural water bodies, cesspools, sewage ponds and to ground surface
5. Concentration of main contaminants in monitoring section by components (when disposing waste water into water bodies, to ground surface) (mg/l):

**LAND**

1. Characteristics and categories of alienated land
2. Area (ha):
   - For sustained use by categories:
   - For temporary use:
   - Land acquisition:
3. Land that requires reclamation (ha):
   - Way of reclamation:
   - Total cost of reclamation (thousands KGS):

**VEGETATION**

1. Types and amount of vegetation exposed to partial or full cutting in the course of projected activities:
   - Of which, are listed or subject to be listed in Red Book of the Kyrgyz Republic:
2. Area of planned cutting:
WILDLIFE
1. Sources of direct impact to wildlife including aquatic wildlife:

2. Presence of migration paths, settlements, nesting and wintering areas on site

NATURAL AREA OF PREFERENTIAL PROTECTION
1. Presence of natural area of preferential protection on site (licensed area) or nearby (less than 5 km away from site):

2. Assessment of impact made by projected activities on environment and socio-economic conditions of population life:

Obligation of project initiator for adhering to environmental requirements, environmental quality standards and norms in the course of construction, operation and closing down of an enterprise

_________________________________________________________

(Signature) Full name
ANNEX 4. SAFEGUARDS POLICY OF THE WORLD BANK

For the full text of OP WB safeguard policies and relevant operating procedures in Russian and English, please refer to the links in the end of this Annex.

Below are the key extracts from OP that give the idea of preventive mechanisms of the World Bank and help to understand and analyze information on environmental, social and legal policies.

**OP 4.01 Environmental Assessment**

EA is a process whose breadth, depth, and type of analysis depend on the nature, scale, and potential environmental impact of the proposed project. EA evaluates a project's potential environmental risks and impacts in its area of influence; examines project alternatives; identifies ways of improving project selection, siting, planning, design, and implementation by preventing, minimizing, mitigating, or compensating for adverse environmental impacts and enhancing positive impacts; and includes the process of mitigating and managing adverse environmental impacts throughout project implementation.

EA takes into account the natural environment (air, water, and land); human health and safety; social aspects (involuntary resettlement, indigenous peoples, and physical cultural resources); and trans boundary and global environmental aspects.

EA considers natural and social aspects in an integrated way. EA is initiated as early as possible in project processing and is integrated closely with the economic, financial, institutional, social, and technical analyses of a proposed project.

**OP 4.04 Natural habitats**

The Bank promotes and supports natural habitat conservation and improved land use by financing projects designed for environmental conservation. The Bank promotes the rehabilitation of degraded natural habitats and does not support projects that involve the significant conversion or degradation of critical natural habitats.

**OP 4.09 Pest Management**

In assisting borrowers to manage pests that affect either agriculture or public health, the Bank supports a strategy that promotes the use of biological or environmental control methods and reduces reliance on synthetic chemical pesticides.

The Bank requires that any pesticides it finances be manufactured, packaged, labeled, handled, stored, disposed of, and applied according to standards acceptable to the Bank. The FAO's Guidelines for Packaging and Storage of Pesticides (Rome, 1985), Guidelines on Good Labeling Practice for Pesticides (Rome, 1985), and Guidelines for the Disposal of Waste Pesticide and Pesticide Containers on the Farm (Rome, 1985) are used as minimum standards.

**OP 4.11 Physical Cultural Resources**

This policy addresses physical cultural resources, which are defined as movable or immovable objects, sites, structures, groups of structures, and natural features and landscapes that have archaeological, paleontological, historical, architectural, religious, aesthetic, or other cultural significance. Physical cultural resources include everything that remained after ancient inhabitants (holy places and battlefields) and also unique natural sites such as waterfalls and canyons.

The Bank does not support projects threatening cultural resources that are property of population. The Bank supports only those projects that are located or designed in such a way as to prevent damage to the environment.

**OP 4.36 Forests**

37
Management, protection and sustainable development of forest ecosystem and its resources are necessary for reducing poverty and sustainable development.

The Bank does not finance plantations that involve any conversion or degradation of critical natural habitats due to potential risk to biodiversity.

The Bank may finance harvesting operations conducted by small-scale landholders, by local communities under community forest management, or by such entities under joint forest management arrangements, if these operations:

(a) have achieved a standard of forest management developed with the meaningful participation of locally affected communities, consistent with the principles and criteria of responsible forest management; or

(b) adhere to a time-bound phased action plan to achieve such a standard. The action plan must be developed with the meaningful participation of locally-affected communities and be acceptable to the Bank.

**OP 4.37 Safety of dams**

The Bank distinguishes between small and large dams. Small dams are normally less than 15 meters in height. This category includes, for example, farm ponds, local silt retention dams, and low embankment tanks. For small dams, generic dam safety measures designed by qualified engineers are usually adequate.

**OP 7.50 Projects on international waterways**

This policy applies to the following types of international waterways: (a) any river, canal, lake, or similar body of water that forms a boundary between, or any river or body of surface water that flows through, two or more states; (b) any tributary or other body of surface water that is a component of any waterway described in (a) above.

This policy applies to the following types of projects: hydroelectric, irrigation, flood control, navigation, drainage, water and sewerage, industrial, and similar projects that involve the use or potential pollution of international waterways as described above.

If ARIS implements any project that relates to this category, it should familiarize itself with OP 7.50 and strictly adhere to the procedures therein.

**OP 7.60 Projects in disputed areas**

Projects in disputed areas may raise a number of delicate problems affecting relations not only between the Bank and its member countries, but also between the country in which the project is carried out and one or more neighboring countries. In order not to prejudice the position of either the Bank or the countries concerned, any dispute over an area in which a proposed project is located is dealt with at the earliest possible stage.

Document references to OP WB, Procedures for Environmental Assessment of WB and Environmental Protection Policy of WB are presented below.

**OP 4.01 Environmental assessment**

**BP 4.01 Environmental assessment**

**OP 4.04 Natural environment**

ANNEX 5. MAIN ISSUES REGARDING ASBESTOS CONTAINING MATERIALS (ACM) and ASBESTOS WASTE TO BE CONSIDERED WITHIN THE SITE-SPECIFIC ESMP

Asbestos is a group of naturally occurring fibrous silicate minerals. It was once used widely in the production of many industrial and household products because of its useful properties, including fire retardation, electrical and thermal insulation, chemical and thermal stability, and high tensile strength. Today, however, asbestos is recognized as a cause of various diseases and cancers and is considered a health hazard if inhaled.

Because the health risks associated with exposure to asbestos are now widely recognized, global health and worker organizations, research institutes, and some governments have enacted bans on the commercial use of asbestos.

Good practice is to minimize the health risks associated with ACM by avoiding their use in new construction and renovation, and, if installed asbestos-containing materials are encountered, by using internationally recognized standards and best practices to mitigate their impact. In all cases, the World Bank expects borrowers and other clients to use alternative materials wherever feasible.

ACM must be avoided in new construction. In reconstruction, demolition, and removal of damaged infrastructure, asbestos hazards must be identified and a risk management plan adopted that includes disposal techniques and end-of-life sites.

Asbestos-containing (AC) products include flat panels, corrugated panels used for roofing, water storage tanks, water, and sewer pipes etc. Thermal insulation containing asbestos and sprayed asbestos for insulation and acoustic damping were widely used through the 1970s and should be looked for in any project involving boilers and insulated pipes.

As asbestos is often used in construction (mainly for roofing) in the Kyrgyz Republic, it can present a risk for the health of workers and population, who live near buildings that need capital repair with replacement of roofing or demolition.

ARIS specialists must inform beneficiaries on potential risk for their health and instruct not using asbestos as construction material during construction/rehabilitation works.

Any asbestos product or material that is ready for disposal is defined as asbestos waste. Asbestos waste also includes contaminated building materials, tools that cannot be decontaminated, personal protective equipment and damp rags used for cleaning. Always this type of waste must be treated as ‘Hazardous Waste’.

In this regards, ACM and asbestos waste must be properly removed, stored in a separate closed area and disposed (with the consent of local administration and environmental inspectors) on a landfill on the special area for disposal of that type of waste.

ARIS must require the contractors that the removal, repair, and disposal of ACM shall be carried out in a way that minimizes worker and community asbestos exposure.

During reconstruction works, workers must avoid destroying asbestos sheets and properly dispose them at construction sites until final disposal happens. Workers must wear protective over garment, gloves and respirators during work with asbestos sheets.

Proper disposal of ACM is important not only to protect the community and environment but also to prevent scavenging and reuse of removed material. ACM must be transported in leak-tight containers to a secure landfill operated in a manner that precludes air and water contamination that could result from ruptured containers.

The removal and disposal of ACM and asbestos waste as well as all other ESMP measures have to be included in both the technical specifications and bill of quantities (BoQs).

Contractor shall develop site-specific ESMF where requirements to ACM and asbestos waste will be contained.
ANNEX 6. INFORMATION ON PUBLIC HEARINGS ON DISCUSSION OF ENVIRONMENTAL AND SOCIAL MANAGEMENT FRAMEWORK (ESMP) AND RESETTLEMENT POLICY FRAMEWORK (RPF) UNDER RWSSP-3

PROGRAM OF PUBLIC HEARINGS

**Goal:** Informing population on social and environmental safety of planned construction/rehabilitation of water supply system in _______________ under the Third Rural Water Supply and Sanitation Project.

**Venue:**

**Date and time of the public hearings:**

INVITATION

Dear _______________________________________________________

We invite you to participate in public hearings on social and environmental safety of planned construction /rehabilitation of water supply system in ________________________________________________________ under Third Rural Water Supply and Sanitation Project.

Public hearings will be conducted on __ _________ 2016

at _______________________________________________________

at _____ o’clock, registration of participants starts at ______ o’clock.

We request to confirm your participation on the phone ______________ or via e-mail
PUBLIC CONSULTATION MEETING MINUTES
Discussion of the Environmental and Social Management Framework (ESMF) and Resettlement Policy Framework (RPF) for water supply rehabilitation in Chu Oblast under the Third Rural Water Supply and Sanitation Project (RWSSP-3)

Date and venue:
February 11, 2016; 12.00 p.m.
ARIS Office, Bishkek

A. Muktarov, Deputy Executive Director of ARIS, opened the meeting, greeted all the present, and introduced ARIS staff engaged in RWSSP-3.

Ch. Chanaliev presented the concept, timeline, goals and objectives of the project.

E. Kutmanova, Safeguards Specialist, presented project’s social and environmental safeguards and provided detailed information on environmental safety and social security plans.

Question: J. Mambetbaev, Head of Ak-Beshim Ayil Okmotu
When will the construction/rehabilitation of the water supply system begin?

Answer: A. Muktarov
The project design is under discussion now. Next we are going to develop detailed design estimates (DDE) and invite tenders to select a contractor, then sign a contract and proceed with the project. The exact dates have not been confirmed yet.

Question: N. Bashakhanov, Chairman of Rural Public Association of Drinking Water Users (RPADWU), Kurama Ayil Okmotu
Will individual water meters be installed? Who will pay for individual household connections?

Answer: A. Muktarov
The connection of individual households to the distribution network and installation of water meters will be at the expense of the household owners. RPADWU should supervise this work to make sure that everything is done properly and hydraulic systems are not damaged. We recommend that similar water meters be installed at all households. It will be cheaper and more effective to install water meters during the construction phase.

Question: M. Ibraimov, Head of Burana Ayil Okmotu
Does the project allow for the rehabilitation of the waste water disposal?

Answer: A. Muktarov
The project budget does not allow for waste water disposal, but we plan to consider a number of standard options in this respect.

Question: T. Bekturganov, Land Specialist, Kurama Ayil Okmotu
If any household (private) turns out to be located on the way of the proposed water transmission main, what will you do? Will the owners receive any compensation in this case?

Answer: E. Kutmanova
In this case, we will develop a Resettlement Action Plan. If any household is affected by the project, it will receive a compensation in accordance with the DDE.

Question: T. Arunov, Chairman of RPADWU, Ibraimov Ayil Okmotu
What measures will be taken to protect water bodies against pollution?

Answer: E. Kutmanova
As part of the water protection measures, we plan to clean up all construction sites, establish water protection zones around local water bodies and streams, contain and remove any potential oil spills in a timely manner, prohibit car and equipment washing within the construction sites, and check equipment for potential oil leaks on a daily basis.

**Question: A. Babyshev, Deputy of Ayil Kenesh, Kurama Ayil Okmotu**
If any tree cutting is planned, will you pay compensations?

**Answer: E. Kutmanova**
Trees and shrubs will be cut down only when needed and only after all necessary permits are obtained. In addition, new trees and shrubs will be planted as part of remedial landscape improvements: in particular, 2 new trees will be planted to replace each cut one.

**Question: S. Murodoshhev, Leading Specialist, Ak-Beshim Ayil Okmotu**
What measures will be taken to minimize negative impacts on local communities? Does the project allow for any noise and dust control measures?

**Answer: E. Kutmanova**
The project allows for a rigorous contractor selection process. One of the primary requirements will be the availability of new modern equipment that meets the Euro-3 standard and has noise control fixtures. The use of heavy equipment near residential areas will be limited during the night time. All construction works will be carried out at working days during normal working hours only. The contractors will be required to ensure proper dust control, including spraying water on the ground surface at the work sites, selecting effective transportation routes and establishing speed limits for trucks and other vehicles. Solid domestic wastes will be stored in special containers with lids.

**Question: S. Moldokulova, Head of the District Center for Disease Control and Prevention (State Sanitary & Epidemiological Supervision), Kurama Ayil Okmotu**
Does the project allow for water disinfection? Do you plan to install any water disinfection units? If yes, what will be installed: germicidal lights or chlorination equipment?

**Answer: A. Muktarov**
The project allows for water disinfection, but this issue is yet to be discussed with the design firm. The type of the water disinfection system has not been selected yet.

Upon discussion, it was RESOLVED to:
- Accept the proposed water supply construction/rehabilitation project in Chu Oblast as feasible for implementation;
- Approve the proposed project and proceed with the implementation.

**A. Muktarov**
Chairman
(Deputy Executive Director of ARIS)

**M. Kerimbekova**
Secretary
Место и время проведения: г. Бишкек, офис АРИС
11 февраля 2016 г. в 12:00 часов

Мухтаров А. — заместитель исполняемого директора АРИС открыл слушания, пожелевствовал приглашенных и представил сотрудников АРИС, участвовавших в подготовке ПСВС-3.

Чапаев Ч. — представил презентацию о концепции, сроках реализации, целях и задачах проекта.

Кутманова Е. — представила презентацию о мерах социальной и экологической безопасности, предусмотренных в проекте. Подробно рассказала об экологической безопасности, социальных мерах защиты.

Вопрос: Мамбетбай Ж. — глава айыл окмөту Ак-Бешим
Когда начнется строительство/реабилитации системы водоснабжения нашего проекта?

Ответ: Мухтаров А.
В настоящее время идет обсуждение дизайн проекта. Далее будет разрабатываться Проектно-сметная документация (ПСД), а затем объявлен тендер на отбор подрядной организации, следующий этап - подписание контракта, а затем начнется реализация проекта. Точные сроки еще не определены.

Вопрос: Башааханов Н. — председатель СООППВ айыл окмөту Курама.
Будут ли установлены индивидуальные дымовые счетчики учета воды?
За счет каких средств будут компенсироваться затраты?

Ответ: Мухтаров А.
Затраты на подключение от распределительных сетей к домохозяйствам с включением водомеров будет за счет собственника. Данные работы должны быть проведены под контролем главы СООППВ для выполнения работ надлежащим образом и неповреждения системы гидравлики. Желательно, использовать однотипные водомеры. Стоимость домовых подключений будет дешевле и качественнее если будут произведены в ходе строительных работ.

Вопрос: Ибраннов М. — глава айыл окмөту Бурана
Будет ли проектом предусмотрена реабилитация системы канализации?

Ответ: Мухтаров А.
В бюджете проекта не предусмотрена канализация, но будут проведены работы по ознакомлению нескольких вариантов типовых решений.

Вопрос: Бектурганов Т. — специалист по земельным вопросам айыл окмөту Бурана
Если объекты собственников (частных лиц) попадают под предполагаемую трассу водохода, что будет сделано? Будет ли какие-либо компенсации?

Ответ: Кутманова Е.
В этом случае будет готовиться План действий по переселению. Если данный объект попадет под воздействие проекта будет выплачиваться компенсации согласно ПДП.

Вопрос: Арнуов Т. — председатель СООППВ (Ибранновский айыл окмөту)
Какие меры будут предприняты для защиты водных объектов от загрязнения?
Ответ: Кутманова Е.
Будут применяться следующие меры: санитарная очистка территорий, отведенных под строительные работы, соблюдение режима водоохранных зон местных водотоков, своевременная зачистка территорий от нефти и мазутных проливов, запрет на мойку машин и механизмов на территории строительства, ежедневные проверки оборудования на предмет утечки масел.

Вопрос: Бабышев А.-депутат айылного Кенеша (айыл окмоту Курама)
В случае вырубки деревьев при строительстве будут ли предусмотрены компенсации?

Ответ: Кутманова Е.
Вырубка деревьев и кустарников будет проводиться строго по необходимости только и после получения разрешительных документов с учетом компенсационного озеленения. За одно вырубленное дерево будет посажено 2.

Вопрос: Муроджиев С.-ведущий специалист (айыл окмоту Ак-Бешим)
Какие меры будут приняты для минимизации воздействия на местных жителей? Предусмотрены ли меры по минимизации шума и пыли?

Ответ: Кутманова Е.
В рамках проекта будет строгий отбор подрядных организаций, важнейшим условием будет наличие новой оснащенной техники со стандартом Евро-3, также техника будет оснащена глушителями, будут ограничения строительных работ с помощью тяжелой техники возле жилых районов в ночные часы, выполнение работ строго по будним дням, в течение, стандартного рабочего времени. Будут применять меры по пылеподавлению путем увлажнения территорий строительства, ограничение скорости движения транспортных средств и выбор подходящих транспортных маршрутов. Твердо-бытовые отходы будут храниться в специальных контейнерах с закрытыми крышками.

Вопрос: Молдокулова С. - глава ПРЦПЗ и ГСЭН (СанЭпицедемИнадор Курама АО):
Будет ли проектом предусмотрено обеззараживание воды? Будут ли установлены обеззараживающие установки? Если да, то какой из предусмотрено: бактерицидные лампы или хлорирование.

Ответ: Муктаров А.
Обеззараживание воды предусмотрено, но это будет обсуждаться с проектировщиком. Пока не известно, что точно будет установлено.

РЕШИЛИ:
Считать разработанный проект по строительству/реабилитации систем водоснабжения в Чуйской области приемлемым к реализации. Одобрить проект и приступить к реализации.

PUBLIC CONSULTATION MEETING MINUTES
Discussion of the Environmental and Social Management Framework (ESMF) and Resettlement Policy Framework (RPF) for water supply rehabilitation in Osh Oblast under the Third Rural Water Supply and Sanitation Project (RWSSP-3)

Date and venue:
February 16, 2016; 11.00 a.m.
Osh

Chubak Chynaliev opened the meeting, greeted all the present, introduced ARIS staff engaged in RWSSP-3, and presented the concept, timeline, goals and objectives of the project.

E. Kutmanova, Safeguards Specialist, presented project’s social and environmental safeguards and provided detailed information on environmental safety and social security plans.

Question: Sh. ul. Rakhmanberdi, Head of Kashka-Jol Ayil Okmotu
When will the construction/rehabilitation of the water supply system begin?

Answer: Ch. Chynaliev
The project design is under discussion now. Next we are going to develop detailed design estimates (DDE) and invite tenders to select a contractor, then sign a contract and proceed with the project. The exact dates have not been confirmed yet.

Question: T. Tuybaev, Head of Otuz-Adur Ayil Okmotu
Who will obtain necessary permits?

Answer: Ch. Chynaliev
All necessary permits should be obtained by the client, i.e. ayil okmotu.

Question: A. Attokurov, Chief Specialist, Kyrgyz-Ata Ayil Okmotu
There are trees and shrubs growing at the proposed construction sites. If any trees are cut down during construction, will there be any compensation?

Answer: E. Kutmanova
Trees and shrubs will be cut down only when needed and only after all necessary permits are obtained. In addition, new trees and shrubs will be planted as part of remedial landscape improvements: in particular, 2 new trees will be planted to replace each cut one.

Question: T. Bazarbaev, Land Surveyor, Otuz-Adur Ayil Okmotu
If any building has to be demolished for construction purposes, who will do this and at whose expense?

Answer: E. Kutmanova
During the design, we will make every effort to avoid house demolition where possible and look for alternative options. However, if demolition is unavoidable, the building will be demolished by the contractor using resettlement funds.

Question: Sh. ul. Rakhmanberdi, Head of Kashka-Jol Ayil Okmotu
Will the construction agreement be a tripartite agreement, i.e. between the ayil okmotu, ARIS and contractor?

Answer: Ch. Chynaliev
Yes, the project allows for technical supervision by ARIS.
No, this will be a bilateral agreement between the ayil okmotu and the contractor.

Question: B. Maripov, Head of Kyrgyz-Ata Ayil Okmotu

There is no water disinfection system in our ayil okmotu. Does the project cover water disinfection issues?

Answer: Ch. Chynaliev

Yes, the project allows for water disinfection. The design institute will consider and offer a number of water disinfection options. The design institute will consult with ayil okmotu and RPADWU on this matter.

Question: A. Ardinov, Land Surveyor, Kashka-Jol Ayil Okmotu

Does the project budget allow for individual household connections?

Answer: Ch. Chynaliev

No, all individual household connections will be at the expense of households. RPADWU should supervise this work to make sure that everything is done properly and hydraulic systems are not damaged. It will be cheaper and more effective to install water meters during the construction phase.

Question: M. Asanov, Chairman of RPADWU, Kyrgyz-Ata Ayil Okmotu

Does the project allow for water meters?

Answer: Ch. Chynaliev

The project budget has certain constraints, so it does not allow for water metering. Water meters should be purchased and installed by households as well. We recommend that RPADWU and ayil okmotu organize centralized procurement of similar water meters (same type).

Question: Abdyrazakov, Kashka-Jol Ayil Okmotu

Who will set the tariffs on water?

Answer: Ch. Chynaliev

The ayil kenesh will establish the tariffs and submit them for approval to the Anti-Trust Committee.

Question: B. Absatarov, Chairman of RPADWU, Kyrgyz-Ata Ayil Okmotu

Does the project cover rehabilitation of sanitation systems?

Answer: Ch. Chynaliev

No, the project does not cover sanitation issues, but we will offer for consideration standard designs of cesspools and waste pits that allow for localized wastewater treatment.

Question: T. Tuybaev, Head of Otuz-Adur Ayil Okmotu

Our current water supply system uses asbestos pipes. Will they be replaced under the project? Why are asbestos containing materials are prohibited?

Answer: E. Kutmanova

If any section of the water supply system subject to rehabilitation turns out to consist of asbestos pipes, they will be replaced. The use of asbestos bearing materials should be avoided in any new construction or rehabilitation due to the health risks posed by asbestos. During the rehabilitation, all necessary precautions will be taken when handling such materials: all asbestos containing materials will be immediately removed from the worksite and disposed to the landfill; workers will necessarily use appropriate safety tools. Since today it is widely recognized that exposure to asbestos is dangerous to human health, world health organizations, trade unions, research institutes and governments of some countries have banned the commercial use of asbestos. In all cases, the World Bank expects its borrowers and other clients to use alternative options where possible.
Upon discussion, it was RESOLVED to:
- Accept the proposed ESMF for subprojects in Kyrgyz-Ata, Otuz-Adyr and Kashka-Jol Ayil Okmotus, Osh Oblast (water supply rehabilitation/reconstruction) as feasible for implementation;
- Approve the proposed project and proceed with the implementation.

концепции, сроках реализации, целях и задачах, проекта.
Кутманова Е. – специалист по мерам безопасности, представила презентацию о мерах
социально-экологической безопасности, предусмотренных в проекте. Подробно рассказала
об экологической безопасности, социальных мерах защиты.
Вопрос: Рахманбериев у. Ш. - глава айыл окмс Оталкан-Адыр
Когда начнутся строительные работы по строительству/реабилитации систем
водоснабжения?
Ответ: Чынапов Ч.
В настоящее время идет обсуждение дизайна проекта. Далее будет разрабатываться
Проектно-сметная документация (ПСД), а затем объявлен тендер на отбор подрядной
организации, следующий этап - подписание контракта, а затем начнется реализация
проекта.
Вопрос: Туйбаев Т.-глава айыл окмс Отураз-Адыр
Кто будет заниматься оформлением разрешительных документов?
Ответ: Чынапов Ч.
Все разрешительные документы должен обеспечить заказчик, то есть айыл окмс.
Вопрос: Аттукуров А. - главный специалист (айыл окмс Кыртыс-Ата)
На месте предполагаемого строительства в нашем айыл окмс находятся деревня и
кустарники. В случае вырубки деревьев при строительстве будут ли предусмотрены
компенсации?
Ответ: Кутманова Е.
Вырубка деревьев и кустарников будет проводиться строго по необходимости только и
после получения разрешительных документов с учетом компенсационного озеленения. За
одно вырубленное дерево будет посажено 2.
Вопрос: Байбаков Т. - зеленохозяин айыл окмс Отураз-Адыр
Если для строительства системы водоснабжения понадобится снести дом, кто будет это
делать и за чей счет будет снос дома?
Ответ: Кутманова Е.
При проектировании будут по возможности обходить объекты сноса, будут исключать
альтернативные пути, но при неизбежных случаях эта процедура будет производиться
подрядной организацией за счет компенсационных мер по переселению.
Вопрос:
Будет ли технический надзор со стороны АРИС
Ответ: Чынапов Ч.
Да, технический надзор предусмотрен.
Вопрос: Рахманбериев у. Ш. - глава айыл окмс Оталкан-Адыр
При осуществлении строительных работ договор будет трансформироваться, то есть айыл
окмс, АРИС и подрядная организация?
Ответ: Чынапов Ч.
Нет, договор будет двухсторонним, будет заключен договор между айыл окмс и
подрядной организацией.
Вопрос: Марипов Б. - глава айыл окмоту Кыргыз-Ата
В настоящее время в нашем айыл окмоту нет обеззараживания питьевой воды. Обеззараживание воды предусмотрено проектом?
Ответ: Чыпалев Ч.
Обеззараживание воды предусмотрено. Проектный институт определит и предложит варианты обеззараживания воды. Проектный институт будет консультироваться с айыл окмоту и СООППВ по данному вопросу.
Вопрос: Арджинов А. - землеустроитель айыл окмоту Кашка-Жол
В проектном бюджете заложены домовye подключения?
Ответ: Чыпалев Ч.
Нет, домовые подключения будут за счёт собственника домовладений. Данные работы должны быть проведены под контролем главы СООППВ для выполнения работ надлежащим образом и не повреждения системы гидравлики. Стоимость домовых подключений будет делене и качественнее если будут произведены в ходе строительных работ.
Вопрос: Асанов М. - председатель СООППВ айыл окмоту Кыргыз-Ата
А водомеры предусмотрены проектом?
Ответ: Чыпалев Ч.
Бюджет проекта ограничен, поэтому по проекту пока не предусмотрено и закуп водомеров также будет производиться за счет собственника. Рекомендуется чтобы СООППВ и айыл окмоту организовали централизованный закуп однотипных водомеров.
Вопрос: Абдыразаков – Кашка-Жол айыл окмоту
Кто будет устанавливать тариф на воду?
Ответ: Чыпалев Ч.
Тариф будет утвержден айылым кенешем и согласован антимонопольным комитетом.
Вопрос: Абзатаров Б. - председатель СООППВ айыл окмоту Отуз-Адыр
Будет ли проведена канализация?
Ответ: Чыпалев Ч.
Нет, система канализации не предусмотрена проектом, но будут предложены для домохозяйств типовые проекты септиков и выгребных ям с применением локальных очистных сооружений.
Вопрос: Туйбаев Т. - глава айыл окмоту Отуз-Адыр
В настоящее время в нашей системе водоснабжения используются асбестовые трубы. Будут ли они заменены в предстоящем проекте? И почему запрещено использование асбестосодержащих материалов?
Ответ: Кутманова Е.
Если участок попадет под реконструкцию то асбестовые трубы будут заменены. В связи с риском для здоровья населения использования асбестосодержащих материалов сходится к минимуму путем исключения таких материалов из нового строительства/реабилитации. При реабилитации систем водоснабжения будут применяться все меры предосторожности при работе с такими материалами: немедленный вызов материала на хранение, применение рабочими инструментов мер безопасности. Поскольку сейчас широко признанна риски для здоровья при нахождении в зоне распространения асбеста, мировые организации по здравоохранению и объединения трудящихся, исследовательские институты и правительства некоторых стран ввели запрет на его коммерческое применение. Во всех случаях Всемирный банк ожидает от заzemщиков и других заказчиков, что они по возможности будут применять альтернативные материалы.
РЕШИЛИ:
Считать ПУОСС, разработанный для подпроектов Ошской области в айыл океоту Отуз-Адыр, Кыргыз-Ата, Кашка-Жол (строительство/реабилитация систем водоснабжения) приемлемым к реализации.
Одобрить проект и приступить к реализации.

Председатель (глава АО Кыргыз-Ата): Марипов Б.

Секретарь (главный специалист ДРПВ): Токтобаев М.

Public hearings were held due to adding subprojects Kun-Tuu, Alekseevka, Kyzyl-Tuu, Tolok in Chui Oblast; Gulbaar, Sary-Tash, Achyk-Suu in Osh oblast; Darhan, Chelpek in Issyk-Kul oblast.

**MINUTES OF MEETING**

Public consultation on the Environmental and Social Management Framework (ESMF) and the Resettlement Policy Framework (RPF) of water system rehabilitation in Chui and Issyk-Kul oblasts under the Third Rural Water Supply and Sanitation Project (RWSSP-3)

**Date and venue:** Bishkek, ARIS Office

June 23, 2016; 01.00 p.m.

A. Muktarov, ARIS Deputy Executive Director, opened the meeting by greeting the participants and introduced ARIS staff who worked on RWSSP-3 preparation.

Ch. Chynaliev, Institutional Strengthening Specialist, presented the concept, lifetime, goals and objectives of the project.

M. Kerimbekova, Safeguards Specialist, presented social and environmental safeguards and provided details of environmental and social security measures proposed under the project.

**Question 1:** How were villages selected? What were the selection criteria?

**Answer:** The list of villages was provided by the Government of the Kyrgyz Republic, as represented by the Department of Drinking Water and Sanitation under the State Agency for Architecture, Construction and Communal Services.

**Question 2:** Will the proposed project strongly affect the natural environment in our area?

**Answer:** Environmental pollution, waste generation and natural resource depletion are very unlikely. Risk management will include preventive environmental management and regular monitoring.

**Question 3:** In case of resettlement or land acquisition, who will pay compensations?

**Answer:** Compensations for land acquisition are the responsibility of the Ministry of Finance of the Kyrgyz Republic, i.e. the Government of the Kyrgyz Republic.

**Question 4:** What is the share of the loan in total financing? Who is responsible for repaying the loan?

**Answer:** The project is financed by the World Bank; 55% is a loan and 45% is a grant. The loan will be repaid by the Kyrgyz Government.

**Question 5:** What action will be taken if water system construction affects any property?

**Answer:** In this case a Resettlement Action Plan will be prepared and the project affected persons (PAPs) will receive compensations.

**Question 6:** Will individuals who have no formal title to property but claim they own it be entitled to any compensation?

**Answer:** If such individuals can formalize their ownership of property and this ownership will be recognized by the law of the Kyrgyz Republic, then they will receive compensation as planned.

**Question 7:** What will be done to minimize tree cutting?
Trees and shrubs will be cut down only when necessary and only upon receipt of permitting documents and with due regard to tree replacement requirements.

Is any co-financing required from ayil okmotus?

No, co-financing from ayil okmotus is not required.

Will water resources be affected?

Environmental risks are very low and necessary action will be take to minimize them: cleanup of construction sites, establishment of buffer zones along local waterways as required by law, timely containment and removal of petroleum and oil spills, prohibition of car and equipment wash at construction sites, and daily equipment inspections for potential oil leaks.

Upon discussion, it was RESOLVED to:

- Accept the proposed water system construction/rehabilitation project for Chui oblast as feasible;
- Approve the project and proceed with the implementation.

A. Muktarov

ПРОТОКОЛ
Общественных слушаний по обсуждению
Основ управления окружающей социальной средой и Основ политики переселения
при реабилитации систем водоснабжения в Чуйской и Иссык-Кульской областях в
рамках Третьего Проекта сельского водоснабжения и санитарии (ПСВС-3)

Место и время проведения: г. Бишкек, офис АРИС
23 июня 2016 г. в 13:00 часов

Муктаров А.— заместитель исполнительного директора АРИС открыл слушания,
pоприветствовал приглашенных и представил сотрудников АРИС, участвовавших в
подготовке ПСВС-3.

Чынналиев Ч.— специалист по институциональному развитию представил презентацию о
концепции, сроках реализации, целях и задачах, проекта.

Керимбекова М.— консультант по мерам безопасности, представила презентацию о мерах
социально-экологической безопасности, предусмотренных в проекте. Подробно
рассказала об экологической безопасности, социальных мерах защиты.

Вопрос 1: Как происходил отбор сел? По каким критериям отбирались села?
Ответ: Список был предоставлен Правительством Кыргызской Республики в лице
Департамента развития питьевого водоснабжения и водоотведения при ГЛАСЖКХ.

Вопрос 2: Экология в нашей окрестности сильно пострадает от предстоящего проекта.
Ответ: Риски загрязнения, засорения и истощения природных ресурсов маловероятны.
Управление рисками будет осуществляться за счет предевительных природоохранных
мероприятий и проведения регулярного экологического мониторинга.

Вопрос 3: В случаях переселения, отвода земель за чей счет будет выплачиваться
компенсация?
Ответ: Ответственность за выплату возмещаемых компенсационных расходов,
вследствие изъятия земель, возлагается на Министерство Финансов Кыргызской
Республики, то есть Правительство Кыргызской Республики.

Вопрос 4: Какова доля кредита от всей суммы финансирования? И кто будет возвращать
кредит?
Ответ: Данный проект финансируется Всемирным Банком- 55%-кредит, 45% грант. Кредит будет выплачивать Правительство Кыргызской Республики.

Вопрос 5: Если при прокладке водовода будет затронуто чье то имущество какие меры
будут предприняты?
Ответ: В таком случае будет составляться План действия по переселению и
соответственно будут выплачиваться компенсации лицу подвергнутому влиянию
проекта (ППВВ).

Вопрос 6: Имеют ли лица не имеющие формальных юридических прав на имущество, но
предъявляющие права на них получить компенсации.
Ответ: Если лицо сможет легализовать свои права на имущество, и данный факт будет
признан законодательством Кыргызской Республики, то он сможет получить компенсации
в полной мере.

59
Вопрос 7: Каковы меры по вырубке зеленых насаждений?
Ответ: Вырубка деревьев и кустарников будет проводиться строго по необходимости и только после получения разрешительных документов с учетом компенсационного озеленения.

Вопрос 8: Предвидится ли загрязнение водных объектов.
Ответ: Риск загрязнения низок, для их предотвращения будут применяться следующие меры: санитарная очистка территорий, отведенных под строительные работы, соблюдение режима водоохранных зон местных водоотоков, своевременная зачистка территорий от нефти и мазутных проливов, запрет на мойку машин и механизмов на территории строительства, ежедневные проверки оборудования на предмет утечки масел.

РЕШЕНИЕ:
Считать разработанный проект по строительству/реабилитации систем водоснабжения в Чуйской области приемлемым к реализации.
Одобрить проект и приступить к реализации.

Председатель (зам. исполнительного директора) А.Муктаров

Секретарь: Керимбекова М

23 июня 2016 г.
MINUTES OF MEETING

Public consultation on the Environmental and Social Management Framework (ESMF) and the Resettlement Policy Framework (RPF) of water system rehabilitation in Osh oblast under the Third Rural Water Supply and Sanitation Project (RWSSP-3)

Date and venue: Osh, ARIS Office
June 24, 2016; 01.00 p.m.

Ch. Chynaliev, Institutional Strengthening Specialist, opened the meeting by greeting the participants and presented the concept, lifetime, goals and objectives of the project.

M. Kerimbekova, Safeguards Specialist, presented social and environmental safeguards and provided details of environmental and social security measures proposed under the project.

Question 1: Are our village officially on the list?
Answer: Yes, the Department of Drinking Water and Sanitation under the State Agency for Architecture, Construction and Communal Services has officially included your villages on the list.

Question 2: Who will have the facilities after the works are complete?
Answer: The facilities will be transferred to ayil okmotus.

Question 3: What water disinfection methods does the project allow for? Can you consider any disinfection methods other than chlorination? Germicidal lamps could be used as an alternative, because they are cheaper to maintain and a chlorination unit will require staff and regular chlorine supplies.
Answer: The project allows for water disinfection, but this issue will be discussed with the design firm. We do not know yet what disinfection equipment will be used. Germicidal lamps have some drawbacks too; if there is a leak, the water will be cross-contaminated, so chlorination is a preferred choice in this case. However, this issue will be considered in detail during the design phase. The strengths and weakness of each disinfection option will be discussed in detail.

Question 4: Does the project budget cover the preparation of detail designs and estimates? Or this will be the responsibility of ayil okmotus?
Answer: The project budget covers detail designs and estimates. The ayil okmotus will not have to do it on their own.

Question 5: Does the project allow for sanitation improvements? Will households have septic tanks installed?
Answer: No, the project does not allow for sanitation improvements or septic tank installation. However, a number of standard designs will be considered to address this issue.

Question 6: Households will pay for individual connections to the water system. Are you going to keep outdoor standpipes?
Answer: We plan to keep 2 or 3 outdoor standpipes for emergency purposes. However, this issue is subject to discussion with ayil okmotus.
Question 7: Some systems use asbestos containing pipes, will the proposed project use such pipes?
Answer: No, asbestos-containing materials will not be used in rehabilitation works, because it is widely recognized today that asbestos is harmful for health. Many international health organizations, labor unions, research institutes and governments of some countries have already banned all commercial use of asbestos. If any asbestos-containing materials or waste are identified during rehabilitation works, they will be removed and stockpiled in an isolated (closed) place with all necessary precautions taken and later disposed (upon agreement with the local administration and environmental inspectors) to a designated landfill.

Question 8: There is some risk that trees will be damaged or cut down during construction/rehabilitation. What are you going to do in this respect?
Answer: The following measures are proposed: replanting or fencing for protection. If any trees have to be cut down, this issue will be first discussed with ayil okmotus and environmental authorities. If there are any large trees near the work sites, they will be marked properly and fenced to protect their trunks and root systems and thus avoid any damage.

Question 9: What about privately owned trees? Will there be any compensation for the loss of such trees? Which budget will this compensation be paid from?
Answer: Yes, our resettlement policy allows for compensations to all project affected persons (PAPs). The compensations will be paid from the budget of the Government of the Kyrgyz Republic (Ministry of Finance).

Question 10: If any land has to be acquired for construction purposes, what compensation will the land owner have?
Answer: Every effort will be made to avoid land acquisition and resettlement. However, if this is unavoidable, all available options will be scrutinized to minimize potential impacts. In case of land acquisition, the priority option is to replace the acquired land by another land plot of equivalent market value that will be acceptable to the PAP and similar to the affected land in terms of size and soil fertility. If there is no such land available, the land owner will receive a cash compensation that will include the replacement cost, plus any registration and transfer taxes and the costs of preparing the land to levels similar to those of the affected land. If the remainder of the land plot is not economically viable, the entire plot will be purchased.

Upon discussion, it was RESOLVED to:

- Accept the proposed water system construction/rehabilitation project for Osh oblast as feasible;
- Approve the project and proceed with the implementation.

A. Muktarov
Chairman
(Deputy Executive Director)

M. Kerimbekova
Secretary
ПРОТОКОЛ
Общественных слушаний по обсуждению
Основ управления окружающей социальной средой и Основ политики переселения
при реабилитации систем водооснабжения в Ошеек областях в рамках Третьего
Проекта сельского водооснабжения и санитарии (ПСВС-3)

Место и время проведения: г.Ош, офис АРИС
24 июня 2016 г. в 13:00 часов

Чынгыз Ч., специалист по институциональному развитию открыл слушания,
показав, как это делается, представлял презентацию о концепции, сроках
реализации, целях и задачах, проекта.

Керимбекова М.— консультант по мерам безопасности, представила презентацию о мерах
социально-экологической безопасности, предусмотренных в проекте. Подробно
рассказала о технологической безопасности, социальных мерах защиты.

Вопрос 1: Наши села уже официально вошли в список?
Ответ: Да, данные села официально вошли в список, который предложил Департамент
развития питьевого водооснабжения и водоотведения при ГААСЖКХ

Вопрос 2: На чём балансе будет числиться завершённый объект?
Ответ: Объект будет числиться на балансе айыл окмоту.

Вопрос 3: Какой вид обеззараживания воды предусмотрен в проекте? Может ли рассмотреть
и другие варианты обеззараживания, кроме хлорирования. Можно установить
бактерицидные лампы, так как их содержание обходится дешевле, тогда как при
хлораторной необходимо содержать персонал, покупать хлор, доставлять его.
Ответ: Обеззараживание воды предусмотрено, но это будет обсуждаться с проектировщиками. Пока не известно, что точно будет установлено. Но есть и
минусы бактерицидной лампы, при утечках может быть вторичное загрязнение
воды, в этом случае лучше хлорирование. При проектировке это вопрос будет
тщательно рассматриваться. Все преимущества и минусы каждого варианта
обсуждения будут обсуждены.

Вопрос 4: Подготовка проектно-сметной документации предусмотрено в бюджете
проекта? Или это будет за счет бюджета айыл окмоту?
Ответ: Подготовка ПСД предусмотрена в бюджете проекта. Но, необходимости
разрабатывать ПСД за счет айыл окмоту.

Вопрос 5: Предусмотрена ли канализация? Будут ли установлены септики для
домохозяйств?
Ответ: Нет, проведение канализации не предусмотрено в проекте, септики также не
закладываются в бюджет. Но будут проведены работы по сближению нескольких
вариантов типовых решений.

Вопрос 6: Домовые подключения будут за счет домохозяйств, а уличные колонки
останутся?
Ответ: Планируется установить 2, 3 уличные аварийные колонки. По этому вопросу еще
будет обсуждаться с айыл окмоту.

Вопрос 7: В некоторых системах имеются асbestosодержащие трубы, будут в
предстоящем проект использовать такие трубы?
Ответ: Нет, при реабилитации асбест не будет применяться, поскольку сейчас широко признан риски для здоровья при нахождении в зоне распространения асбеста. Мировые организации по здравоохранению и объединения трудящихся, исследовательские институты и правительства некоторых стран ввели запрет на его коммерческое применение. В случае наличия асбеста в ходе всех реабилитационных работ, асbestosодержащие материалы и отходы будут разбираться и складироваться соответствующим образом в изолированном (закрытом) месте и с последующим захоронением (по согласию местной администрации и инспекторов окружающей среды) в специально отведенном отвале.

Вопрос 8: При строительстве/реабилитации есть риски повреждения и выбросы зеленых насаждений. Что будет предприниматься в этих случаях?
Ответ: В этих случаях будут применяться следующие меры: пересадка и ограждение сохраняемых деревьев. Необходимый снос деревьев согласуется с учётом оконту и природоохранными органами. Если рядом с участком работ растут большие деревья, их следует четко обозначить и защитить ограждением, предохраняющим деревья и корневые системы, не допуская их повреждения.

Вопрос 9: А если это будет частное дерево? Будут ли компенсированы потери? И из какого бюджета выплачивается компенсация?
Ответ: Да, в этом случае будет предусмотрена компенсация согласно плану действия переселения, и будет выплата лицу подвергнемому влиянию проекта. Компенсационные выплаты будут оплачиваться из бюджета Правительства Кыргызской Республики (Министерство Финансов Кыргызской Республики).

Вопрос 10: Если при строительстве будет необходим неограниченный отвод частной земли, то какую компенсацию получит землевладелец?
Ответ: Необходимо избегать любого отвода земли и переселения, или если невозможно их избежать, их следует минимизировать путем изучения всех возможных вариантов. В случае отвода земли, в качестве приоритетного варианта представляет собой уменьшение участка земли эквивалентной рыночной стоимости, приобретённой для ЛПВП и должен соответствовать по площади и плодородию изъятому участку. При отсутствии доступной земли, выплачивается денежная компенсация по стоимости земли, а также расходы на оформление и перерегистрацию прав и расходы по подготовке земли до состояния, аналогичного состоянию земельного участка, подвергаемого воздействию проекта. Если остаток участка более не пригоден для использования — то должен быть выкуплен весь участок земли.

РЕШЕНИЕ:
Считать разработанный проект по строительству/реабилитации систем водоохлаждения в Чуйской области приемлемым к реализации.
Одобрить проект и приступить к реализации.

Председатель
(зам. исполнительного директора) ____________________________ А.Муктаров

Секретарь: ____________________________ Керимбекова М
Список
участников общественных слушаний по обсуждению Плана управления окружающей средой и Основ политики переселения при реабилитации систем водоснабжения в Ошской области в рамках Третьего Проекта сельского водоснабжения и санитарии (ПСВС-3)

Третий Проект сельского водоснабжения и санитарии (ПСВС-3)

г. Ош
24 июня 2016 г.
