</table>
| Scope of project and activity | The roadway width ranges between 8.0-9.0 m. The carriageway width is mainly 6.0 m. The width of shoulders is 1.0-1.5 m. The existing pavement is of asphalt concrete. The following defects are found on the road: undulations, potholes, deformations, frequent cracks, ruts. Three bridges which cross dry ravines are located on the road. The bridges require repairing. The existing pipe-culverts are mainly damaged, silted. Some culverts are not subject to repair and shall be replaced. Preparatory works include:  
- Fixing, re-conditioning and staking of route – 21.347 km;  
- Milling of the existing pavement average thickness 14 cm, disposal to temporary borrow pit PK 180+00-PK 213+47, stabilized with the addition of crushed aggregates, bitumen emulsion and cement - 20922 m²;  
- Construction of concrete ditches 3102/1178 L/m/m³. |

## SITE DESCRIPTION

### Name of site

Rehabilitation of secondary road Ulianivka-Bodbe-Gamarjveba, km 0+000-km 21+347 Signagi and Dedoplistskaro Municipality, Kakheti region

### Describe site location

The secondary road Ulianivka-Bodbe-Gamarjveba is the nearest road which links Dedoplistskaro and the villages located around with the international road Tbilisi-Bakurtsikhe-Lagodekhi (Azerbaijan Border) as well as with other regions of Georgia. Length of rehabilitation is 21.347 km.

### Who owns the land?

Signagi and Dedoplistskaro Municipality

### Description of geographic, physical, biological, geological, hydrographic and socio-economic context

- Location - The secondary road Ulianivka-Bodbe-Gamarjveba starts at km 4 of Chalaubani-Signagi road. The road crosses the villages: Magaro, Ulianovka, Bodbe, Gamarjveba and joins the road Tsnori-Dedoplistskaro-Kvemo Kedi at km 19.  
- Air - Air quality in the project area is good due to low traffic levels and the absence of industrial facilities.  
- Water and Soil - No pollution is reported.  
- Flora - The construction activities will be carried out in the existing alignment and without alteration of the existing elements (straights, curves, widths etc.). Vegetation would only be affected in the sections were side drains are to be rehabilitated or reconstructed. Vegetation is sparse along the road with rare
occurrence of bushes and small trees that are not part of riparian forests. No protected species have been observed in the vicinity of the road.

**Fauna** - Impacts upon fauna will remain unchanged during construction since works will be confined to the existing road. There are several rivers that are crossed by the road. Works in these sections will be restricted to rehabilitation of bridge abutments, requiring the removal of garbage or other impediments to water flows; resulting in a positive impact on existing fauna.

**Noise** - The current noise level is low due to low traffic levels and a lack of industrial facilities. The project will have modest impact on the village population, as construction works will constrain movement only of those people who reside immediately along the road and this impact will be limited to the rehabilitation phase.

### Locations and distance for material sourcing, especially aggregates, water, stones?

Inert material will be extracted from the Sighnaghi municipality on the territory of village Kvemo Magharo.

### LEGISLATION

**Identify national & local legislation & permits that apply to project activity**

The project triggers World Bank OP/BP 4.01 - Environmental Assessment and, according to its principles, has been classified as environmental Category B. The present EMP has been prepared to meet requirements of OP/BP 4.01.

Georgian legislation does not require any type of environmental review, approval, or permitting for the project. Though according to the national regulatory system,

(i) works contractor must be licensed,

(ii) construction materials must be obtained from licensed providers,

(iii) if contractor wishes to open quarries or extract material from river bed (rather than purchasing these materials from other providers), then the contractor must obtain licenses for extraction,

(iv) if contractor wishes to operate own asphalt or concrete plant (rather than purchasing these materials from other providers), then the contractor must obtain an environmental permit with an established ceiling of pollutant concentrations in emissions,

(v) disposal of the construction waste into a landfill or permanent placement of access inert material generated in the course of earth works in a selected location must be approved by local (municipal) governing bodies in written.

### PUBLIC CONSULTATION

**Identify when / where the public consultation process took place**

Environmental Management Framework for the Secondary and Local Roads Project II was disclosed through the RDMRDI web page and a stakeholder consultation meeting was held on 03/02/2012. The present site-specific EMP consultation meeting with local communities was held on August 3, 2012. The minutes of this meeting is uploaded on the department web-site.

### INSTITUTIONAL CAPACITY BUILDING

**Will there be any capacity building?**

### PART 3: MITIGATION MEASURES

<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES CHECKLIST</th>
</tr>
</thead>
</table>
| 0. General Conditions | Notification and Worker Safety | (a) The local construction and environment inspectorates and communities have been notified of upcoming activities.  
(b) The public has been notified of the works through appropriate notification in the media and/or at publicly accessible sites (including the site of the works).  
(c) All legally required permits have been acquired for construction and/or rehabilitation.  
(d) The Contractor formally agrees that all work will be carried out in a safe and disciplined manner designed to minimize impacts on neighboring residents and environment.  
(e) Workers’ PPE will comply with international good practice (always hardhats, as needed masks and safety glasses, harnesses and safety boots).  
(f) Appropriate signposting of the sites will inform workers of key rules and regulations to follow. |
| A. General Rehabilitation and/or Construction Activities | Air Quality | (a) During excavation works dust control measures shall be employed, e.g. by spraying and moistening the ground.  
(b) Demolition debris, excavated soil and aggregates shall be kept in controlled area and sprayed with water mist to reduce debris dust.  
(c) During pneumatic drilling or breaking of pavement and foundations dust shall be suppressed by ongoing water spraying and/or installing dust screen enclosures at site.  
(d) The surrounding environment (sidewalks, roads) shall be kept free of soil and debris to minimize dust.  
(e) There will be no open burning of construction/waste material at the site.  
(f) All machinery will be well maintained and serviced and there will be no excessive idling of construction vehicles at sites. |
| | Noise | (a) Construction noise will be limited to restricted times agreed to in the permit.  
(b) During operations the engine covers of generators, air compressors and other powered mechanical equipment shall be closed, and equipment placed as far away from residential areas as possible. |
| | Water Quality | (a) The site will establish appropriate erosion and sediment control measures such as e.g. hay bales and/or silt fences to prevent sediment from moving off site and causing excessive turbidity in canalization and nearby streams and rivers. |
| | Waste management | (a) Waste collection and disposal pathways and sites will be identified for all major waste types expected from excavation, demolition and construction activities.  
(b) Mineral construction and demolition wastes will be separated from general refuse, organic, liquid and chemical wastes by on-site sorting and stored in appropriate containers.  
(c) Construction waste will be collected and disposed properly into formally agreed upon locations.  
(d) Whenever feasible Contractor will reuse and recycle appropriate and viable materials (except when containing asbestos). |
| B. Impacts on surface drainage system | Water Quality | (a) There will be no unregulated extraction of groundwater, nor uncontrolled discharge of process waters, cement slurries, or any other contaminated waters into the ground or adjacent streams or rivers.  
(b) There will be proper storm water drainage systems installed and care taken not to silt, pollute, block or otherwise negatively impact natural streams, rivers, ponds and lakes by construction activities.  
(c) There will be procedures for prevention of and response to accidental spills of fuels, lubricants and other toxic or noxious substances.  
(d) Construction vehicles and machinery will be washed only in designated areas where runoff will not pollute natural surface water bodies. |
<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES CHECKLIST</th>
</tr>
</thead>
</table>
| C. Historic building(s) | Cultural Heritage | (a) If construction works take place close to a designated historic structure or are located in a designated historic district, notification shall be made and approvals/permits be obtained from local authorities and all construction activities planned and carried out in line with local and national legislation.  
(b) It shall be ensured that provisions are put in place so that artifacts or other possible “chance finds” encountered in excavation or construction are noted and registered, responsible officials contacted, and works activities delayed or modified to account for such finds. |
| D. Acquisition of land | Land Acquisition Plan/Framework | (c) If expropriation of land was not expected but is required, or if loss of access to income of legal or illegal users of land was not expected but may occur, that the Bank’s Task Team Leader shall be immediately consulted.  
(d) The approved Land Acquisition Plan/Framework (if required by the project) will be implemented |
| E. Toxic materials | Asbestos management | (a) If asbestos is located on the project site, it shall be marked clearly as hazardous material  
(b) When possible the asbestos will be appropriately contained and sealed to minimize exposure  
(c) The asbestos prior to removal (if removal is necessary) will be treated with a wetting agent to minimize asbestos dust  
(d) Asbestos will be handled and disposed by skilled & experienced professionals  
(e) If asbestos material is stored temporarily, the wastes should be securely enclosed inside closed containments and marked appropriately. Security measures will be taken against unauthorized removal from the site.  
(f) The removed asbestos will not be reused |
| | Toxic/hazardous waste management | (a) Temporarily storage on site of all hazardous or toxic substances will be in safe containers labeled with details of composition, properties and handling information  
(b) The containers of hazardous substances shall be placed in an leak-proof container to prevent spillage  
(c) The wastes shall be transported by specially licensed carriers and disposed in a licensed facility.  
(d) Paints with toxic ingredients or solvents or lead-based paints will not be used |
| F. Affected forests, wetlands and/or protected areas | Ecosystem protection | (a) All recognized natural habitats, wetlands and protected areas in the immediate vicinity of the activity will not be damaged or exploited, all staff will be strictly prohibited from hunting, foraging, logging or other damaging activities.  
(b) A survey and an inventory shall be made of large trees in the vicinity of the construction activity, large trees shall be marked and cordoned off with fencing, their root system protected, and any damage to the trees avoided  
(c) Adjacent wetlands and streams shall be protected from construction site run-off with appropriate erosion and sediment control feature to include by not limited to hay bales and silt fences  
(d) There will be no unlicensed borrow pits, quarries or waste dumps in adjacent areas, especially not in protected areas |
| G. Risk of unexploded ordinance (UXO) | Hazard to human health and safety | (a) Before start of any excavation works the Contractor will verify that the construction area has been checked and cleared regarding UXO by the appropriate authorities |
| H Traffic and pedestrian safety | Direct or indirect hazards to public traffic and pedestrians by construction activities | (b) In compliance with national regulations the Contractor will insure that the construction site is properly secured and construction related traffic regulated. This includes but is not limited to  
▪ Signposting, warning signs, barriers and traffic diversions: site will be clearly visible and the public warned of all potential hazards  
▪ Traffic management system and staff training, especially for site access and near-site heavy traffic. Provision of safe passages and crossings for pedestrians where construction traffic interferes.  
▪ Adjustment of working hours to local traffic patterns, e.g. avoiding major transport activities during rush hours or times of livestock movement  
▪ If required, active traffic management by trained and visible staff at the site for safe passage for the public  
▪ Ensuring safe and continuous access to all adjacent office facilities, shops and residences during construction |

Minutes of Public Consultation Meeting at Bodbe on Environmental Management Plan for Rehabilitation works of Ingiri-Shamgona Road

Public consultation on Environmental Management Plan for the Rehabilitation of secondary road Ulianivka-Bodbe-Gamarjveba km 0+000-km 21+347 was held on 3 August 2012 at Lamiskana Municipality. The goal of the public discussion was to inform the local communities about the purpose of the upcoming works, their timeline; temporary inconvenience expected from the construction works; and planned measures for mitigating the negative environmental impact.

Local stakeholders had the possibility to ask questions and express their opinion during the public discussion, so that their comments could have been considered in the final version of the Environmental Management Plan.

Representatives of the Roads Department of Georgia included Otar Khatiaishvili and Lulita Bubashvili.

The public meeting was attended by the population of villages Ulianivka, Bodbe, Gamarjveba (see attachment).

Mr. Otar Khatiaishvili and Lulita Bubashvili informed attendees about the Environmental Management Plan of rehabilitation works under Secondary and Local Roads project.

Mr. Otar Khatiaishvili opened the meeting and informed attendees about the roads construction on the territory of municipality, also was discussed the meaning of Secondary and Local Roads rehabilitation project for Georgian economic development.

Mrs. Lulita Bubashvili made a presentation of Environmental Management Plan. She covered the scope of planned works, their possible impact on the natural environment and human health. Also was overviewed mitigation measures proposed to reduce negative environmental impacts of the project in the construction and operation phases.
Guram Vakhtangashvili
Deputy Chairman, Roads Departments of Georgia  (signed and sealed)

Staff of the Roads Department of Georgia:

Otar Khatiashvili  (signed)
Luiza Bubashvili  (signed)
