I. Introduction and Context

Country Context
This project will benefit, through the implementing partners, all IDA-eligible countries and low income countries (LICs), including those that graduate from being IDA-eligible but were part of the initial program (Debt Management Facility 1, November 2008 to June 2014).

Sectoral and Institutional Context
It links with the World Bank’s work program to provide capacity building to support growth and poverty reduction in eligible developing countries by strengthening their capacity to manage debt effectively.

Relationship to CAS/CPS/CPF
This program is linked with the World Bank’s global initiative on supporting clients in strengthening capacity in debt management.

II. Project Development Objective(s)

Proposed Development Objective(s)
To strengthen capacity of DMF-eligible countries to manage debts effectively, so as to enable governments to finance their operations prudently with appropriate cost-risk mix to contribute to macro-economic stability and ensure sustainable debt levels over the long term.
Key Results
Client countries demonstrate improved debt management capacities and institutions as evaluated through the DeMPAs; Quality of government debt management is improved through a regular development of Debt Management strategies (DMS); Client countries continuously monitor government debt sustainability; Client countries, based on pre-conditions and prevailing market infrastructure, take steps towards further developing domestic debt market, if it part of debt management objectives.

III. Preliminary Description
Concept Description
The program builds on the activities and guiding principles DMF Program. This project envisages provision of grants to the MEFMI (Debt Management Programme) to work on the following activities jointly with World Bank teams:

a) Application of the Debt Management Performance Assessment (DeMPA) tool at the national and subnational levels. This benchmarks country debt management performance using the Bank’s DeMPA tool.

b) Design of Debt Management Reform Plans. This provides detailed and sequenced country-owned capacity building project plans that aim to alleviate the weaknesses identified and analyzed by the DeMPA or through other assessments. These plans detail expected outputs and outcomes, actions, sequencing and milestones and provide an estimate of budget and resources required to implement the respective plans.

c) Assistance in developing Medium-Term Debt Management Strategy (MTDS) development. This provides technical assistance (TA) on the joint Bank-IMF MTDS framework for formulating and implementing a debt management strategy for the medium term.

d) Assistance in domestic debt market development.

e) Organization of regional training events

While carrying out these activities, the recipient may be asked to carry out the following tasks as determined within the scope of the specific mission or training program.

(a) providing country background information on the debt management situation in Eligible Member Countries before specific missions, including information on fiscal policy, monetary policy and legal framework related to debt management, as well as related technical assistance programs if available;
(b) drafting summaries of country strengths and weaknesses with respect to debt management, based on the above-identified background information before particular missions;
(c) participating in pre-mission activities, which will entail data aggregation, teaching useful functions and decrying the cost-risk of the existing debt portfolio for MTDS missions and trainings;
(d) preparing sections of the write-up of the report during specific missions;
(e) providing inputs on appropriate sections for wrap-up presentations during specific missions;
(f) incorporating peer review comments in the report and providing additional information after missions; and
(g) participating in training events related to the DMF’s work program.

IV. Safeguard Policies that Might Apply
