**FINAL ENVIRONMENTAL AND SOCIAL REVIEW CHECKLIST**

Micro-project title: Construction of Out-Patient Clinic in Qaghsi Community

Micro-project #: TKQ - 02

Is the environmental and Social management plan (ESMP) developed?

Yes +  No _____

Does ESMP provide a full list of potential impacts and establish adequate measures for their mitigation?

Yes +  No _____

**Conclusion of the Final Environmental and Social Assessment**

</thead>
<tbody>
<tr>
<td>Municipality, community</td>
<td>Kotayq marz, Qaghsi Community</td>
</tr>
<tr>
<td>Scope of site-specific activity</td>
<td>At present, the Out-Patient Clinic is situated in the room of 10sq/m on the first floor of the Community Administrative office. Five employees are currently working in the station. The archive materials of the patients are located in the room occupying the major part of the space. Currently, 30 people on average apply for medical assistance to the out-patient clinic in daily basis, but they are forced to turn to the other medical centers in neighboring settlements Solak and Hrazdan, because of insufficient sanitary and physical conditions. The confidentiality of the patients is not ensured, as the room is not well isolated from the Community Administrative office and there are no separate rooms for the private examination of the patients. The current building does not have heating, water and sewage systems. Nearly 240 children up to 7 years old are forced to get their medical services in the conditions described above. Within the framework of Micro-project, a one floor building is proposed to be built adjacent to the building of Community Administrative Office. The following cabinets and specialists will be available: pediatrician, therapeutist and gynecologist.</td>

### SITE DESCRIPTION

<table>
<thead>
<tr>
<th>Name of institution whose premises are to be rehabilitated</th>
<th>&quot;Qaghsi Health Center” SNCO</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address and site location</td>
<td>Address: Kotayq Marz, Qaghsi community, 1st street N62/2 land</td>
</tr>
<tr>
<td>Who owns the land?</td>
<td>The land is the property of the Community Qaghsi. The total land plot is 1000 sq. meter. According to the decision N 17 - A of the land allocation adopted by Community Council on16 Sep., 2015 the land was allocated for the construction works.</td>
</tr>
</tbody>
</table>
| Description of physical and natural environment around the site (see maps and photo annex 1) | The proposed land plot for the construction is located close to the Community Administrative office, in the central part of the village. The land plot is 1000sq/m and is the property of the Community. The proposed land is not used by any private household; there are no structures, crops, trees or business in the proposed site. The functional meaning of the land is intended for public constructions according to the Real Estate Certificate of State registration. One of land sides is next to the main road; the other three sides are close to the free lands which are also property of the Community. The building is designed to be built 10-15 meters far away from the main road. Thus the issue of restricted access to roads and private property and disruption of local traffic is not anticipated. Activities to enhance crossing safety through extra signs/crosswalks will be implemented. There are no subterranean networks at the proposed land plot. The village is supplied with gas. The heating system and hot water in the designed building will be provided using gas boilers fixed on the walls. The external communication systems are very close to the proposed area. The sewage removal system will be connected to the main drainage pipeline which is 120 meter far from the site. The main electricity system is 60 meter far from the site and linear cable is
proposed to be installed. The potable water will be supplied from the main pipeline located in the same street.

¹ Land acquisitions includes displacement of people, change of livelihood encroachment on private property this is to land that is purchased/ transferred and affects people who are living and/or squatters and/or operate a business (kiosks) on land that is being acquired.

² Toxic / hazardous material includes but is not limited to asbestos, toxic paints, noxious solvents, removal of lead paint, etc.
### PART C: MITIGATION MEASURES

<table>
<thead>
<tr>
<th>ACTIVITY</th>
<th>PARAMETER</th>
<th>MITIGATION MEASURES (provide costs where applicable)</th>
</tr>
</thead>
</table>
| **0. General Conditions**       | Notification and Worker Safety | (a) The local construction and environment inspectorates and communities have been notified of upcoming activities  
(b) The public has been notified of the works through appropriate notification in the media and/or at publicly accessible sites (including the site of the works)  
(c) All legally required permits have been acquired for construction  
(d) The Contractor formally agrees that all work will be carried out in a safe and disciplined manner designed to minimize impacts on neighboring residents and environment.  
(e) Workers’ PPE will comply with international good practice (always hardhats, as needed masks and safety glasses, harnesses and safety boots)  
(f) Appropriate signposting of the sites will inform workers of key rules and regulations to follow.                                                                                                                   |
| **A. General Construction Activities** | Air Quality | (a) During interior demolition debris-chutes shall be used above the first floor  
(b) Demolition debris shall be kept in controlled area and sprayed with water mist to reduce debris dust  
(c) During pneumatic drilling/wall destruction dust shall be suppressed by ongoing water spraying and/or installing dust screen enclosures at site  
(d) The surrounding environment (sidewalks, roads) shall be kept free of debris to minimize dust  
(e) There will be no open burning of construction / waste material at the site  
(f) There will be no excessive idling of construction vehicles at sites                                                                                                                                          |
| **Noise**                       |                                | (a) Construction noise will be limited to restricted times agreed to in the permit  
(b) During operations the engine covers of generators, air compressors and other powered mechanical equipment shall be closed, and equipment placed as far away from residential areas as possible                                                                                                                                                                                                                                                                                                                                 |
| **Water Quality**               |                                | (a) The site will establish appropriate erosion and sediment control measures such as e.g. hay bales and / or silt fences to prevent sediment from moving off site and causing excessive turbidity in nearby streams and rivers.                                                                                                                                                                                                                                                                                                                                 |
| **Waste Management**            |                                | (a) Waste collection and disposal pathways and sites will be identified for all major waste types expected from demolition and construction activities.  
(b) Mineral construction and demolition wastes will be separated from general refuse, organic, liquid and chemical wastes by on-site sorting and stored in appropriate containers.  
(c) Construction waste will be collected and disposed properly by licensed collectors  
(d) The records of waste disposal will be maintained as proof for proper management as designed.  
(e) Whenever feasible the contractor will reuse and recycle appropriate and viable materials (except asbestos)                                                                                                                                                                                                                      |
| **B. Individual wastewater treatment system** | Water Quality | (a) The approach to handling sanitary wastes and wastewater from building sites must be approved by the local authorities  
(b) Before being discharged into receiving waters, effluents from individual wastewater systems must be treated in order to meet the minimal quality criteria set out by national guidelines on effluent quality and wastewater treatment  
(c) Monitoring of new wastewater systems (before/after) will be carried out  
(d) Construction vehicles and machinery will be washed only in designated areas where runoff will not pollute natural surface water bodies.                                                                                                                                                                                                                                                                 |
| **C. Historic building(s)**    | Cultural Heritage             | (a) If the building is a designated historic structure, very close to such a structure, or located in a designated historic district, notification shall be made and approvals/permits be obtained from local authorities and all construction activities planned and carried out in line with local and national legislation.  
(b) It shall be ensured that provisions are put in place so that artifacts or other possible “chance finds” encountered in excavation or construction are noted and registered, responsible officials contacted, and works activities delayed or modified to account for such finds.                                                                                                                                       |
<table>
<thead>
<tr>

<th>PARAMETER</th>
<th>MITIGATION MEASURES CHECKLIST</th>
</tr>
</thead>
</table>
| **D. Acquisition of land** | Land Acquisition Plan/Framework | (a) If expropriation of land was not expected but is required, or if loss of access to income of legal or illegal users of land was not expected but may occur, that the Bank’s Task Team Leader shall be immediately consulted.  
(b) The approved Land Acquisition Plan/Framework (if required by the project) will be implemented. |
| **E. Toxic Materials** | Asbestos management | (a) If asbestos is located on the project site, it shall be marked clearly as hazardous material  
(b) When possible the asbestos will be appropriately contained and sealed to minimize exposure  
(c) The asbestos prior to removal (if removal is necessary) will be treated with a wetting agent to minimize asbestos dust  
(d) Asbestos will be handled and disposed by skilled & experienced professionals  
(e) If asbestos material is be stored temporarily, the wastes should be securely enclosed inside closed containments and marked appropriately. Security measures will be taken against unauthorized removal from the site.  
(f) The removed asbestos will not be reused. |
| | Toxic / hazardous waste management | (a) Temporarily storage on site of all hazardous or toxic substances will be in safe containers labeled with details of composition, properties and handling information  
(b) The containers of hazardous substances shall be placed in an leak-proof container to prevent spillage and leaching  
(c) The wastes shall be transported by specially licensed carriers and disposed in a licensed facility.  
(d) Paints with toxic ingredients or solvents or lead-based paints will not be used. |
| **F. Affected forests, wetlands and/or protected areas** | Protection | (a) All recognized natural habitats, wetlands and protected areas in the immediate vicinity of the activity will not be damaged or exploited, all staff will be strictly prohibited from hunting, foraging, logging or other damaging activities.  
(b) A survey and an inventory shall be made of large trees in the vicinity of the construction activity, large trees shall be marked and cordoned off with fencing, their root system protected, and any damage to the trees avoided  
(c) Adjacent wetlands and streams shall be protected from construction site run-off with appropriate erosion and sediment control feature to include by not limited to hay bales and silt fences  
(d) There will be no unlicensed borrow pits, quarries or waste dumps in adjacent areas, especially not in protected areas. |
| **G. Disposal of medical waste** | Infrastructure for medical waste management | (a) In compliance with national regulations the contractor will insure that newly constructed and/or rehabilitated health care facilities include sufficient infrastructure for medical waste handling and disposal; this includes and not limited to:  
- Special facilities for segregated healthcare waste (including soiled instruments “sharps”, and human tissue or fluids) from other waste disposal; and  
- Appropriate storage facilities for medical waste are in place; and  
- If the activity includes facility-based treatment, appropriate disposal options are in place and operational. |
| **H Traffic and Pedestrian Safety** | Direct or indirect hazards to public traffic and pedestrians by construction activities | (a) In compliance with national regulations the contractor will insure that the construction site is properly secured and construction related traffic regulated. This includes but is not limited to:  
- Signposting, warning signs, barriers and traffic diversions: site will be clearly visible and the public warned of all potential hazards  
- Traffic management system and staff training, especially for site access and near-site heavy traffic. Provision of safe passages and crossings for pedestrians where construction traffic interferes.  
- Adjustment of working hours to local traffic patterns, e.g. avoiding major transport activities during rush hours or times of livestock movement  
- Active traffic management by trained and visible staff at the site, if required for safe and convenient passage for the public.  
- Ensuring safe and continuous access to office facilities, shops and residences during renovation activities, if the buildings stay open for the public. |

Republic of Armenia, Kotayq Marz, Qaghsi Community
Construction Permit N1, 12 April 2016
This is given to Qaghsi Community for the Construction of new a Out-patient Clinic building in Qaghsi Community.
The design documents
1. are developed by “AskMed Design” LLC, License 10573
2. Received positive expertise conclusion by State Expertise Center of Design Documents of RA

The construction works will be implemented in one year.

Signed and Stamped
Head of the Community S. Alexsanyan
Annex 5: Minutes of Environmental and Social Public Consultations

MINUTES

Of Public Consultations on draft Environmental and Social Management Plan for the construction of an Out-Patient Clinic in Qaghsi Community

A stakeholder consultation meeting on the draft Environmental and Social Management Plan (ESMP) for the construction of Out-Patient in Qaghsi was held on February 11, 2016 in Qaghsi community, Kotayq Marz.

The announcement for the meeting in Armenian and English languages, including its date and time, was disclosed on the ATDF web page (www.atdf.am). Information on the meeting day and time was posted on information boards of Qaghsi Community Administration Office; in addition the Administration conducted telephone calls to ensure participants’ attendance.

The public consultation was carried out by ATDF Social Specialist Sonya Msryan and ATDF Environmental Specialist Asya Osipova and ATDF Promotion specialist Vahe Voskanyan. 20 participants were present at the meeting, among which 7 women (about 35%).

V. Voskanyan welcomed participants and introduced the main purpose of the consultation and ATDF specialists. He presented the key points of approved project and highlighted technical details of construction of the Out-patient clinic. He specified the proposed location of the building also talked about the functionality of the clinic outlining that the following cabinets and specialists will be available: pediatrician, therapeutist and gynecologist.

A. Osipova introduced the main purpose as well as World Bank requirements and Armenian legislation on conducting environmental and social assessment. She introduced ESMP for the construction of the out-patient clinic in the Community and outlined likely negative environmental impacts related to the Micro-project implementation. These include pollution of air, generation of construction waste and direct or indirect hazards to public traffic and pedestrians by construction activities.

Ms. Osipova explained what measures ATDF will apply to mitigate possible negative impacts, including construction waste transportation. It was mentioned that ESMP covers the issue of the transportation and disposal of construction wastes and excessive soil.

Since the proposed area for the building area is not fenced and is located in the center of the Community, A. Osipova talked about safety measures for community members and workers and disturbance to community life due to construction activities. Technical supervisors on monthly basis will keep under control the fulfillment of all the environmental mitigation measures included in ESMP, and report the deviations to ATDF.
S. Msryan presented the main provisions of the ESMF concerning to the social aspects of the Project. She talked about possible social risks and ways of their mitigation. She emphasized that the project does not involve any resettlement as proposed area of the construction is public property; however she briefly introduced key features of Resettlement Policy Framework.

S. Msryan talked also about main socio-economic challenges including engagement of women, youth and vulnerable groups in distribution of benefits. She outlined that these groups should have equal opportunities to be engaged in project benefits. The participants suggested involving workers from the Community mentioning that it will reduce unemployment in Community and labor immigration for seasonal works.

Ms. Msryan explained mechanisms of public engagement and grievance redress mechanism (GRM) to be applied during project implementation. Elected grievance focal point at the community level Karine Balasanyan was introduced to the community members. S. Msryan explained the purpose of Focal points at local level and welcomed participants to apply to Karine in case of questions/feedback or grievances concerning to the project implementation.

S. Msryan informed the beneficiaries that they also have the option to contact ATDF directly to communicate their grievance if they are unable to, or do not wish to, go through the PIC grievance focal point. S. Msryan explained all the cannels of grievance submition involving e-mail address, hot line telephone number, postal address and web-site link and outlined that ATDF contact information is referred on the booklets delivered to the participants, as well as on the information desk already available in public visable places in the Community. S. Msryan introduced that information on Micro-project details permanently will be available on the information desks, as well as on-going announcements and references. She outlined that these will support to raising public awareness and early identification, assessment and resolution of complaints on Project activities.

The participants were welcomed to raise questions regarding to the discussed questions. Several technical questions were raised by the participants regarding to the selection procedure of Constructor organization, provision of medical equipments and furniture by ATDF and starting date of construction works: V. Voskanyan responded on all technical questions.

One of the participants outlined that they are happy with the Project as new job opportunities will be available in the community. He mentioned that the sanitary and physical conditions of the old clinic were unsatisficient especially taking into account that kids are used to get their medical services there. Head of Community Mr. Alexanyan added that out-patient clinic will serve also to the resident from the surrounding communities.

The participants interested in what cases they can turn to Focal Point at the Community level and in what cases to ATDF. S. Msryan mentioned several examples of grievances introducing the levels of problem solving. She specified that ATDF will solve all the grievances that were not
solved at the Community level by Focal Point and/or Project Implementation Commette and in cases complainant does not want to apply to the latter based on personal concerns.

One of the participants asked to specify the measures ATDF will apply if Constructor Organization is not undertaking its responsibilities properly. A. Osipova mentioned possible cases when special measures may be applied to correct Constructor’s activities.

The list of participants and photos are attached.
