## Data Set 1 - Variables by Educational Attainment

Each tab contains 52 variables that cover:

- Skills acquisition history
- Background conditions
- Self-reported cognitive skills
- Self-reported socio-emotional skills
- Self-reported job-relevant skills
- Labor market outcomes

All variables are organized by educational attainment using ISCED 1997. Based on this classification, variables are grouped into three levels: (1) Lower secondary education (ISCED 2); (2) Upper secondary education (ISCED 3); and (3) Tertiary education (ISCED 4). The data is also categorized by age groups: all adults, which encompasses answers of all respondents in urban areas, and youth, which encompasses answers of all respondents in rural areas. To the extent possible, each variable is accompanied with the specific question used to gather the data. For multiple questions, the table includes only one of the questions asked as an example.
