### Implementation Status Overview

The Walbrzych Project is an 8.5 MW coke oven gas power generation plant to be located in Walbrzych, south-western Poland. The plant is located approximately 200 meters from the Walbrzych Coke Plant, which supplies the coke gas for the Project. Merkury Energia, a special purpose company for the Project, has a contract with the coke plant for the supply of coke gas which will enable the gross production of approximately 68 GWh of electricity every year.

The project is performing well technically and financially, generating emission reductions (ERs) slightly ahead of the original schedule and is expected to generate all ERs purchased by the World Bank Netherlands European Carbon Facility (NECF) under the ER Purchase Agreement (ERPA) signed in July 2007, and is thus meeting its objectives.

### Locations

No Location data has been entered

### Key Decisions Regarding Implementation

Continue verification of ERs

### Related Projects

There are no related projects.
